

## PHASES OF FIRST-YEAR TEACHING

*By Ellen Moir –*

*This article was originally written for publication in the newsletter for the California New Teacher Project, published by the California Department of Education (CDE), 1990.*

First-year teaching is a difficult challenge. Equally challenging is figuring out ways to support and assist beginning teachers as they enter the profession. Since 1988 the Santa Cruz New Teacher Project has been working to support the efforts of new teachers. After supporting nearly 1,500 new teachers, a number of developmental phases have been noted. While not every new teacher goes through this exact sequence, these phases are very useful in helping everyone involved — administrators, other support personnel, and teacher education faculty—in the process of supporting new teachers. These teachers move through several phases from anticipation, to survival, to disillusionment, to rejuvenation, to reflection; then back to anticipation. Here's a look at the stages through which new teachers move during that crucial first year. New teacher quotations are taken from journal entries and end-of-the-year program evaluations.

### Anticipation Phase

The anticipation phase begins during the student teaching portion of preservice preparation. The closer student teachers get to completing their assignment, the more excited and anxious they become about their first teaching position. They tend to romanticize the role of the teacher and the position. New teachers enter with a tremendous commitment to making a difference and a somewhat idealistic view of how to accomplish their goals. *"I was elated to get the job but terrified about going from the simulated experience of student teaching to being the person completely in charge."* This feeling of excitement carries new teachers through the first few weeks of school.

### Survival Phase

The first month of school is very overwhelming for new teachers. They are learning a lot and at a very rapid pace. Beginning teachers are instantly bombarded with a variety of problems and situations they had not anticipated. Despite teacher preparation programs, new teachers are caught off guard by the realities of teaching. *"I thought I'd be busy, something like student teaching, but this is crazy. I'm feeling like I'm constantly running. It's hard to focus on other aspects of my life."*

During the survival phase, most new teachers struggle to keep their heads above water. They become very focused and consumed with the day-to-day routine of teaching. There is little time to stop and reflect on their experiences. It is not uncommon for new teachers to spend up to seventy hours a week on schoolwork.

Particularly overwhelming is the constant need to develop curriculum. Veteran teachers routinely reuse excellent lessons and units from the past. New teachers, still uncertain of what will really work, must develop their lessons for the first time. Even depending on unfamiliar prepared curriculum such as textbooks is enormously time consuming.

*"I thought there would be more time to get everything done. It's like working three jobs: 7:30-2:30, 2:30-6:00, with more time spent in the evening and on weekends."* Although tired and surprised by the amount of work, first-year teachers usually maintain a tremendous amount of energy and commitment during the survival phase, harboring hope that soon the turmoil will subside.

## Disillusionment Phase

After six to eight weeks of nonstop work and stress, new teachers enter the disillusionment phase. The intensity and length of the phase varies among new teachers. The extensive time commitment, the realization that things are probably not going as smoothly as they want, and low morale contribute to this period of disenchantment. New teachers begin questioning both their commitment and their competence. Many new teachers get sick during this phase.

Compounding an already difficult situation is the fact that new teachers are confronted with several new events during this time frame. They are faced with back-to-school night, parent conferences, and their first formal evaluation by the site administrator. Each of these important milestones places an already vulnerable individual in a very stressful situation.

Back-to-school night means giving a speech to parents about plans for the year that are most likely still unclear in the new teacher's mind. Some parents are uneasy when they realize the teacher is just beginning and many times pose questions or make demands that intimidate a new teacher.

Parent conferences require new teachers to be highly organized, articulate, tactful and prepared to confer with parents about each student's progress. This type of communication with parents can be awkward and difficult for a beginning teacher. New teachers generally begin with the idea that parents are partners in the learning process and are not prepared for parents' concerns or criticisms. These criticisms hit new teachers at a time of waning self-esteem.

This is also the first time that new teachers are formally evaluated by their principal. They are, for the most part, uncertain about the process itself and anxious about their own competence and ability to perform. Developing and presenting a "showpiece" lesson is time-consuming and stressful.

During the disillusionment phase classroom management is a major source of distress. *"I thought I'd be focusing more on curriculum and less on classroom management and discipline. I'm stressed because I have some very problematic students who are low academically, and I think about them every second my eyes are open."*

At this point, the accumulated stress of the first-year teacher, coupled with months of excessive time allotted to teaching, often brings complaints from family members and friends. This is a very difficult and challenging phase for new entries into the profession. They express self-doubt, have lower self-esteem and question their professional commitment. In fact, getting through this phase may be the toughest challenge they face as a new teacher.

## Rejuvenation

The rejuvenation phase is characterized by a slow rise in the new teacher's attitude toward teaching. It generally begins in January. Having a winter break makes a tremendous difference for new teachers. It allows them to resume a more normal lifestyle, with plenty of rest, food, exercise, and time for family and friends. This vacation is the first opportunity that new teachers have for organizing materials and planning curriculum. It is a time for them to sort through materials that have accumulated and prepare new ones. This breath of fresh air gives novice teachers a broader perspective with renewed hope.

They seem ready to put past problems behind them. A better understanding of the system, an acceptance of the realities of teaching, and a sense of accomplishment help to rejuvenate new teachers. Through their experiences in the first half of the year, beginning teachers gain new coping strategies and skills to prevent, reduce, or manage many problems they are likely to encounter in the second half of the year. Many feel a great sense of relief that they have made it through the first half of the year. During this phase, new teachers focus on curriculum development, long-term planning and teaching strategies.

*"I'm really excited about my story writing center, although the organization of it has at times been haphazard. Story writing has definitely revived my journals."* The rejuvenation phase tends to last into spring with many ups and downs along the way. Toward the end of this phase, new teachers begin to raise concerns about whether they can get everything done prior to the end of school. They also wonder how their students will do on the tests, questioning once again their own effectiveness as teachers. *"I'm fearful of these big tests. Can you be fired if your kids do poorly? I don't know enough about them to know what I haven't taught, and I'm sure it's a lot."*

### Reflection

The reflection phase beginning in May is a particularly invigorating time for first-year teachers. Reflecting back over the year, they highlight events that were successful and those that were not. They think about the various changes that they plan to make the following year in management, curriculum, and teaching strategies. The end is in sight, and they have almost made it; but more importantly, a vision emerges as to what their second year will look like, which brings them to a new phase of anticipation. *"I think that for next year I'd like to start the letter puppets earlier in the year to introduce the kids to more letters."*

It is critical that we assist new teachers and ease the transition from student teacher to full-time professional. Recognizing the phases new teachers go through gives us a framework within which we can begin to design support programs to make the first year of teaching a more positive experience for our new colleagues.
