KEY TAKEAWAYS

▶ **There are growing differences in demographics characteristics between schools.**

- All students, schools, and communities benefit from diversity yet several of our schools lack it.
- Other schools are challenged to meet the needs of increasing numbers of disadvantaged families.
- It is unlikely that a greater balance of diversity can be achieved by school redistricting without breaking up communities or neighborhoods and without long bus rides for students.

▶ **Enrollment has been declining in specific rural schools.**

- Low enrollment schools create unique challenges to providing equitable educational opportunities for students
- Low enrollment schools have higher costs per pupil to operate

▶ **Divergent middle school enrollment trends will pose challenges in the future.**

- Our already largest middle school (Henley) is where enrollment is increasing.
- Our already smallest middle school (Walton) is where enrollment is declining.
