

New regulations for persons testing positive for COVID-19 (according to the Bavarian government)

Positive case

Dealing with confirmed cases of infection

- *If your child is sick / positive **with symptoms**, (e.g. fever, sore throat, stomach ache, nausea) we kindly ask you to keep your child home. After the third day of being sick and missing school we need a doctor's note.*
- *If your child is positive **with no symptoms** your child can come to school but **must wear a mask** - for minimum of 5 days, maximum 10 days.*

Your understanding and consideration in this, is the key to avoiding infection in the current phase.

Dealing with symptoms of illness

Basically, **anyone who is sick has to stay home - regardless of whether COVID-19 suspected or not.**

- If the fever persists after three days, the general condition significantly declines / worsens, a doctor should be consulted.
- If you have mild symptoms, such as a runny nose or a sore throat, we recommend that you do a self-test at home before you go to school .
- In addition, wearing a mask can protect against passing on the SARS-CoV-2 virus if **symptoms of the common cold are very mild.**
