

Return to In-Person Learning - Frequently Asked Questions

Question: Wondering about air ventilation/circulation and if the district will use CO2 monitors to check for high density CO2 in the classrooms?

Answer: We've adopted a positive air pressure system in all our classrooms to maintain peak fresh air flow. Our HVAC systems are constantly replacing the indoor air with outside fresh air. This doesn't give CO2 any time to build up in a classroom. [Attached](#) is our updated district wide ventilation plan if you'd like to find out more about how we adjust and maintain our environmental air protocols.

Question: I have concerns about kids eating snacks at school and using their fingers.

Answer: As far as snack, we've created protocols to minimize time when students are without masks. We are "snacking" outside of the classroom in separate spaces that will be cleaned between users. I do think your suggestion of keeping snacks out of hands (e.g. in wrappers) is a good one that we can pass along to our families. Also, know that students will wash/sanitize their hands before and after eating, too.
