

SLC NEWS!

SUCCESS LEARNING CENTER

It's Great to be Back In School!

SLC students have returned for in-person instruction! Students have returned to our schools on a hybrid model through the use of safety protocols and systematic monitoring. Our students and staff are

extremely excited to inspire each other and continue to create meaningful learning environments during these very unusual times!

UPCOMING EVENTS

Friday, March 26th:

Deadline to Submit Writing Contest Entries

Seed Collecting:

Ongoing Project to Boost and Preserve the SLC STEM Garden

Spring Break April 2nd-9th:
Happy Spring!!

Parent Testimonial ~ Thank you Parents and Families!

My daughter transferred to Success Learning Center at the end of her 8th grade year. She was at her end, struggling with anxiety, depression and ADD. Despite the best efforts of her middle school faculty, she was lost. She was ditching class, and far too often refused to go to school at all. Between difficult kids and teachers who didn't understand her, she couldn't cope. I honestly believe she would have failed 8th grade completely if not for the transfer to SLC.

Due to the extraordinary efforts of the SLC teachers aids, counselors and faculty, my daughter thrived, getting the best grades she has ever had. But even more important than the grades, my daughter didn't feel like a failure anymore. Everyone at SLC understands how to bring out the best in the kids. They understood when my daughter was having a bad day, and they help her process through it. She felt valued and understood, which in turn inspired her to do her best. They saw her gifts and helped her shine.

I don't know what would have happened with my daughter if not for SLC. We probably would have struggled with home schooling, which neither she nor I would have been qualified or capable of. But because she had the opportunity to attend SLC she made life-long friends and was able to graduate with her class. Many kids are not that lucky.

Success Learning Center is a blessing to the children and families of this community. I hope that someday all districts have this option for the children who need it.

Sincerely,

Mother of Graduated SLC Student

Go the Green Way!

Believe it or not, a garden in your school or in your home helps the planet. We do not use pesticides or herbicides in our STEM Garden. Growing food without pesticides and herbicides cuts down on air and water pollution, and less fossil fuel, as there is no need to transport vegetables from across the nation or even around the world. SLC students have been busy getting our garden ready for spring so we may take advantage of our harvest!
