Heads Up: Concussions in Youth Sports a Fact Sheet for Athletes

WHAT IS A CONCUSSION?

- A concussion is a brain injury that:
- Is caused by a bump or blow to the head
- Can change the way your brain normally works
- Can occur during practice or games in any sport
- Can happen even if you haven't been knocked out
- can be serious even if you've just been "dinged"

WHAT ARE THE SYMPTOMS OF A CONCUSSION?

- Headache or "pressure" in head
- Nausea or vomiting
- Balance problems or dizziness
- Sensitivity to light
- Sensitivity to noise
- Feeling sluggish, hazy, foggy or groggy
- Concentration or memory problems
- Confusion
- Does not "feel right"

WHAT SHOULD I DO IF I THINK I HAVE A CONCUSSION?

- **Tell your coaches and parents.** Never ignore a bump or blow to the head even if you feel fine. Also tell your coach if one of your teammates may have a concussion.
- Get a medical checkup. A doctor or health care professional can tell you if you have a concussion and when you are OK to return to play.
- **Give yourself time to get better.** If you have had a concussion, your brain needs time to heal. While your brain is still healing, you are much more likely to have a second concussion. Additional concussions can cause damage to your brain. It is important to rest until you get approved from a doctor or health care professional to return to play.

HOW CAN I PREVENT A CONCUSSION?

Every sport is different, but there are steps you can take to protect yourself:

- Follow your coach's rules for safety and the rules of the sport
- Practice good sportsmanship at all times
- Use the proper sports equipment, including personal protective equipment (such as helmets, padding, shin guards and eye and mouth guards)

In order for equipment to protect you, it must be:

- The right equipment for the game, position or activity
- Worn correctly and fits well
- Used every time you play

IT'S
BETTER
TO MISS
ONE
GAME
THAN
THE
WHOLE
SEASON

Heads Up: Concussions in Youth Sports a Fact Sheet for Parents & Guardians

WHAT IS A CONCUSSION?

A concussion is a brain injury. Concussions are caused by a bump or blow to the head. Even a "ding", "getting your bell rung" or what seems to be a mild bump or blow to the head can be serious.

You can't see a concussion. Signs and symptoms of a concussion can show up right after the injury or may not appear to be noticed until days or weeks after the injury. If your child reports any symptoms of a concussion or if you notice the symptoms yourself, seek medical attention right away.

What are the symptoms reported by athletes?

Headache or "pressure" in head Nausea or vomiting Sensitivity to light Sensitivity to noise Feeling sluggish, hazy, foggy or groggy Concentration on memory problems

Confusion
Does not "feel right"

What are the signs observed by parent/guardians?

Appears dazed or stunned
Is confused about assignments or position
Forgets an instruction
Is unsure of game, score or opponent
Moves clumsily
Loses consciousness (even briefly)
Shows behavior or personality changes
Can't recall events prior to hit or fall
Can't recall events after hit or fall

How can I help my child prevent a concussion?

Ensure they follow their coach's rules for safety and the rules of the sport. Make sure your child wears the right protective equipment for their activity (such as helmets, padding, shin guards, and eye/mouth guards). Protective equipment should fit properly, be well maintained, and worn consistently and correctly. Also learn the signs and symptoms of a concussion.

What should you do if you think your child has a concussion?

Seek medical attention right away. A health care professional will be able to decide how serious the concussion is and when it is safe for your child to return to sports.

Keep your child out of play. Concussions take time to heal. Don't let your child return to play until a health care professional says it is OK. Children, who return to play too soon, while the brain is still healing, risk a greater chance of having a second concussion. Additional concussions can be very serious. They can cause permanent brain damage, affecting your child for a lifetime.

IT'S BETTER TO MISS ONE GAME THAN THE WHOLE SEASON
