

Kindergarten Mathematics- What Your Child Will Learn

In **Kindergarten** your child will focus on learning numbers and what numbers represent, learning about addition and subtraction, and working with shapes. Instructional activities may include:

- Breaking up numbers less than or equal to 10 in more than one way
- For any number from 1 to 9, finding the missing quantity that is needed to reach 10
- Counting how many objects are in a group and comparing the quantities of two groups of objects
- Comparing two numbers to identify which is greater than or less than the other
- Understanding addition as putting together/adding to and subtraction as taking apart/taking from
- Adding and subtracting very small numbers quickly and accurately
- Representing addition and subtraction word problems using problems using objects or by drawing pictures
- Solving addition and subtraction word problems involving numbers that add up to 10 or less or by subtracting from a number 10 or less
