FCD: RESOURCE CONSERVATION MANAGEMENT

The Brockton Public School System recognizes the importance of conservation efforts in controlling operating costs and in preserving our natural resources.

There are two key elements to resource conservation

- Staff and student involvement in day-to-day conservation efforts
- Cost-effective management of facilities operations

Staff and student participation requires the organization of informational and educational programs aimed at developing positive day-to-day habits and practices in resource conservation.

The cost-effective management of facilities operations involves the efficient management and use of all buildings, the proper maintenance of these buildings, and the application of sound conservation practices and technologies.
