

Waste Management, Resource Conservation, and Recycling

The Bethany Board of Education (Board) recognizes the importance of minimizing the Bethany Public School District's (District) use of natural resources, providing a high-quality environment that promotes health and productivity, and effectively managing the District's resources. To that end, the Superintendent or his/her designee shall develop a resource management program which includes strategies for implementing effective and sustainable resource practices, exploring renewable and clean energy technologies, reducing energy and water consumption, minimizing utility costs, reducing the amount of waste of consumable materials, encouraging recycling and green procurement practices, and promoting conservation principles.

The Superintendent or his/her designee shall regularly inspect District facilities and operations and make recommendations for maintenance and capital expenditures which may help the District reach its conservation and management goals.

The Superintendent or his/her designee shall make every effort to identify funding opportunities and cost-reducing incentive programs to help the District achieve its conservation and management goals.
