

**Cool STEM Jobs!**

Have you ever wondered who builds roller coasters?

# Roller Coaster Engineer

This job combines mechanical, structural, civil and electrical engineering, as well as physics. As a roller coaster engineer, you'll need to consider key factors such as safety, environment and riders' enjoyment.

# How do people learn about storms?

# Storm Chasers

Storm Chasers use technical equipment to collect scientific data of storms. This means they sometimes have to get close to extreme weather phenomena, like tornados, to study and better understand how they work.

Can makeup be a part of science?

# Cosmetic Scientist

Cosmetic scientists are the people who make sure that the products we use not only smell and feel good, but are also safe for us to use. Some might work on the formulation of new cosmetics, while others might focus on improving the performance of the current product.

How do we learn about volcanoes?

# Volcanologist

Volcanologists are specialised geologists who study the patterns of volcanoes. They study a variety of ash and rock samples, simulate controlled explosions that mimic volcanic activity, and even listen to the gurgles of a volcano
