# Honors Calculus Summer Review Packet

## I. Introduction:

- This is the Honors Calculus Summer Review Packet. It has multiple parts, so please read this introduction thoroughly. By completing this work carefully and accurately, you will be academically prepared to begin Honors Calculus in September/January.
- If you have already completed Pre-Calculus, complete this work over the summer while the material is still familiar. If you are not scheduled for Calculus Honors until Second Semester, be sure to periodically look over the material throughout the first semester.
- If you are taking Pre-Calculus during the first semester next year, **you are still responsible for completing this packet!** You are prepared to complete much of this even after only Algebra 2, so get those parts done over the summer. Then I suggest you periodically and systematically work on completing this throughout the first semester. **Do not wait until you have finished Pre-Calculus** to begin this packet because you will be too overwhelmed in those couple days between semesters!

## II. Suggestions:

- Show any necessary work.
- If there is any confusion, there will be time for brief questions during the first several days of class.
- Feel free to get together and work on this, but **everyone must hand in his/her own assignment with the appropriate work.**
- You will be using a graphing calculator in this course, so be sure yours is in good working condition.

## III. Timeline for the first week of class (brief general questions will be addressed in class):

- ❖ Day 1: Discuss policies/procedures, clarify standard graphs;
- ❖ Day 2: Brief general questions will be addressed in class, clarify theory;
- ❖ Day 3: Graphing Quiz (without a calculator!), answer any final questions;
- ❖ Day 4: Summer Packet Test and Packet due.

## IV. Graphs: be sure you are able to graph the following equations without a calculator:

$$y=x$$

$$y=[x]$$

$$y=\frac{1}{x}$$

$$y=\sqrt{x}$$

$$y=\sin x$$

$$y=\csc x$$

$$y=|x|$$

$$y=x^3$$

$$y=c$$

$$y=e^x$$

$$y=\cos x$$

$$y=\sec x$$

$$y=x^2$$

$$y=\sqrt[3]{x}$$

$$x=c$$

$$y=\ln x$$

$$y=\tan x$$

$$y=\cot x$$

- V. **Readings:** The pages referenced are located in the “Calculus Online Textbook Excerpt” with the math work on the ND website. It is recommended that you **DO NOT PRINT the Online Textbook Excerpt**, as it is 68 pages, but rather view it on your computer or other mobile device. For your convenience, both textbook pages and PDF pages have been provided in this Packet.
- A. “What is Calculus?” ((TB p. xix-xxi / PDF p. 1-3)
- B. Chapter 1 (TB p.1-56/PDF p.4-53) in its entirety. You are responsible for all terminology and information contained therein.
- C. Chapter 6 – selected passages  
TB p. 327 / PDF p. 54: Logarithm Properties (middle of the page)  
TB p. 328 / PDF p. 55: The number "e"- information and definition (middle of the page)
