Mission Statement

We commit to inspiring and empowering all students in Randolph schools to reach their full potential as unique, responsible and educated members of a global society.

Randolph Township School District Affirmative Action Statement

Equality and Equity in Curriculum

The Randolph Township School district ensures that the district's curriculum and instruction are aligned to the state's standards. The curriculum provides equity in instruction, educational programs and provides all students the opportunity to interact positively with others regardless of race, creed, color, national origin, ancestry, age, marital status, affectional or sexual orientation, gender, religion, disability or socioeconomic status.

N.J.A.C. 6A:7-1.7(b): Section 504, Rehabilitation Act of 1973; N.J.S.A. 10:5; Title IX, Education Amendments of 1972

RANDOLPH TOWNSHIP BOARD OF EDUCATION

EDUCATIONAL GOALS

VALUES IN EDUCATION

The statements represent the beliefs and values regarding our educational system. Education is the key to self-actualization, which is realized through achievement and self-respect. We believe our entire system must not only represent these values, but also demonstrate them in all that we do as a school system.

We believe:

- The needs of the child come first
- Mutual respect and trust are the cornerstones of a learning community
- The learning community consists of students, educators, parents, administrators, educational support personnel, the community and Board of Education members
- A successful learning community communicates honestly and openly in a non-threatening environment
- Members of our learning community have different needs at different times. There is openness to the challenge of meeting those needs in professional and supportive ways
- Assessment of professionals (i.e., educators, administrators and educational support personnel) is a dynamic process that requires review and revision based on evolving research, practices and experiences
- Development of desired capabilities comes in stages and is achieved through hard work, reflection and ongoing growth

Randolph Township School District
Randolph Elementary Schools
Science ~ Grade 3

The third grade curriculum is designed to engage students by using hands-on and inquiry-based explorations as they examine engineering practices. Students will explore phenomena in order to formulate answers to questions and engineer solutions for everyday life. The curriculum is designed to be multidisciplinary; integrating NJSLS-S, language arts and math practices seamlessly throughout student-driven investigations. The students will participate in inquiry and problem based learning to answer questions such as: *“What is typical weather in different parts of the world and during different times of the year? How can the impact of weather-related hazards be reduced? How do organisms vary in their traits? How are plants, animals, and environments of the past similar or different from current plants, animals, and environments? What happens to organisms when their environment changes? How do equal and unequal forces on an object affect the object? How can magnets be used in various ways?”* Our students will experience the excitement of authentic learning activities throughout the course of the units and develop a strong understanding of the engineering process and scientific phenomena. Students will explore their passions while building a deeper understanding of cross-cutting concepts and increasing their preparedness for college, career, and life.

Science ~ Grade 3

UNIT I: Engineering

| | | |
|---|---|---|
| TRANSFER: Utilize the engineering process to systematically solve practical problems. | | |
| <p>STANDARDS / GOALS:</p> <p>3-5-ETS1-1: Define a simple design problem reflecting a need or a want that includes specified criteria for success and constraints on materials, time, or cost.</p> <p>3-5-ETS1-2: Generate and compare multiple solutions to a problem based on how well they meet the criteria and constraints of the design problem.</p> <p>3-5-ETS1-3: Plan and carry out fair tests in which variables are controlled and failure points are considered to identify aspects of a model or prototype that can be improved.</p> <p>ELA/Literacy: W.3.2 W.3.2.B W.3.8 SL.3.4 RL.3.2 RI.3.1 RI.3.7</p> | ENDURING UNDERSTANDINGS | ESSENTIAL QUESTIONS |
| | People’s needs and wants change over time, as do their demands for new and improved technology. | <ul style="list-style-type: none"> How do engineers design and solve a problem? |
| | Engineers improve existing technologies or develop new ones to increase their benefits, decrease known risks, and meet societal demands. | <ul style="list-style-type: none"> How do engineers develop, plan, test and improve upon solution based on wants and needs? |
| | KNOWLEDGE | SKILLS |
| | <p>Students will know:</p> <p>Possible solutions to problems reflecting a need or a want include specified criteria for success and constraints.</p> <p>Research on a problem should be carried out throughout the design process.</p> | <p>Students will be able to:</p> <p>Identify a simple design problem reflecting a need or a want.</p> <p>Develop specific criteria for success.</p> <p>Discover and review research on an identified problem.</p> <p>Synthesize research to develop a plan for a successful solution.</p> <p>Compare solutions to a problem based on criteria and constraints.</p> |

| | | |
|--|--|---|
| <p>Math: MC.3.MD.A.2 MP.2 MP.4 MP.5 3.MD.A.2 3-5.OA</p> | <p>Success of a solution can be compared based on constraints and how well it meets specific criteria.</p> <p>Communicating with peers about proposed solutions is an important part of the design process.</p> <p>Tests are designed to identify successes and difficulties for enhanced designs.</p> <p>KEY TERMS: constraint, criteria, engineer, technology</p> | <p>Produce a solution(s) to an identified problem.</p> <p>Test and evaluate the success of a developed solution(s) to a problem.</p> <p>Collaborate to compare the value of possible solution(s) based on specified criteria and constraints.</p> <p>Discuss possible solutions to problems, the success and difficulties of elements of the design and potential for improvement.</p> <p>Reflect on the benefits of collaboration to work and improve upon design elements.</p> <p>Plan and carry out tests in which variables are controlled and difficulties are considered to improve a model or prototype.</p> <p>Collaborate to improve and identify solutions in which variables are controlled.</p> <p>Test variables are controlled to identify aspects of a model or prototype that can be improved to best solve a problem.</p> <p>Discuss and reflect upon different solutions to best solve the problem, given the criteria and constraints.</p> |
|--|--|---|

ASSESSMENT EVIDENCE: Students will show their learning by:

- Designing a solution to make an improvement on a real-life problem involving research. (ie: designing an irrigation system for keeping plants watered during a two-week school break)

KEY LEARNING EVENTS AND INSTRUCTION:

- Define a simple real-life problem
- Consider constraints and other criteria by brainstorming designs to solve a problem
- Plan and conduct investigations that test solutions
- Identify problems and improvements in order to increase benefits or decrease risks associated with a design or solution
- Develop an understanding of potential failure points or difficulties with a design
- Communicate with peers throughout the design process to evaluate for revisions
- Develop an understanding of how failures can lead to improvements in designs
- Compare design solutions to improve a design or future solutions
- Observe various objects and identify certain patterns of motion they make in real-life

| <p>ASSESSMENT EVIDENCE: Students will show their learning by:</p> <ul style="list-style-type: none"> ● Designing and carrying out an investigation to demonstrate evidence of the effect force has on an object (ie: a maze, arcade game or sport) <p>KEY LEARNING EVENTS AND INSTRUCTION:</p> <ul style="list-style-type: none"> ● Recognize forces as a push or a pull ● Demonstrate how strength and direction can be changed through real-world exploration ● Conduct a qualitative investigation of how a force’s strength affects the speed and distance ● Plan and conduct an investigation to observe and measure contact forces ● Build an electromagnet and test its strength | | |

- Conduct multiples tests to identify magnetism and static electricity as forces that can act on objects without touching them
- Determine whether an object is in motion
- Explain how the speed of an object is determined
- Describe how unbalanced forces affect the motion of an object
- Make observations and measurements to produce data to serve as the basis for an explanation of phenomena or to test a design solution by planning and carrying out observations
- Describe regular patterns of motion and how future motion can be predicted from them

Science ~ Grade 3
UNIT III: Similarities and Differences in Organisms

| | | |
|--|--|--|
| TRANSFER: Evaluate and analyze relationships among organisms. | | |
| <p>STANDARDS / GOALS:</p> <p>3-LS1-1: Develop models to describe that organisms have unique and diverse life cycles but all have in common birth, growth, reproduction, and death.</p> <p>3-LS3-1: Analyze and interpret data to provide evidence that plants and animals have traits inherited from parents and that variations of these traits exist in a group of similar organisms.</p> <p>3-LS3-2: Use evidence to support the explanation that traits can be influenced by the environment</p> <p>3-LS4-1: Analyze and interpret data from fossils to provide evidence of the organisms and the environments in which they lived a long time ago.</p> <p>3-ESS2-1: Represent data in tables and graphical displays to describe typical weather conditions expected</p> | ENDURING UNDERSTANDINGS | ESSENTIAL QUESTIONS |
| | Patterns of change can be used to make predictions. | <ul style="list-style-type: none"> How are life cycles important in understanding patterns of change? |
| | Similarities and differences in patterns can be used to sort and classify natural phenomena. | <ul style="list-style-type: none"> How do scientists sort and classify information? |
| | Cause and effect relationships are routinely identified and used to explain change. | <ul style="list-style-type: none"> How does the environment affect organisms' traits and development? |
| | Observable phenomena exist from very short to very long time periods. | <ul style="list-style-type: none"> What information does evidence provide about the types of organisms that existed and their environment? |
| | Science assumes consistent patterns in natural systems. | <ul style="list-style-type: none"> How do scientists determine the kinds of organisms and the nature of their environment? |
| | KNOWLEDGE | SKILLS |
| | <p>Students will know:</p> <p>Reproduction is essential to the continued existence of the unique and diverse life cycles of every type of organism.</p> | <p>Students will be able to:</p> <p>Explore various life cycles to identify patterns in various life cycles patterns.</p> <p>Develop models to illustrate that organisms have unique and diverse life cycles.</p> |

| | | |
|--|--|--|
| <p>during a particular season.</p> <p><u>ELA/Literacy:</u> RI.3.2 RI.3.3 RI.3.7 RI.3.8 RI.3.9 W.3.7 RF.3.3.C</p> <p><u>Math:</u> 3.NBT 3.NF MP.2 MP.4 3.MD.B.4</p> | <p>Many characteristics' traits and functions of organisms are inherited from their parents.</p> <p>Different organisms vary in how they look and function because they have different inherited traits.</p> <p>Some characteristics result from individuals' interactions with the environment.</p> <p>The environment also affects the traits as an organism develops.</p> <p>Some kinds of plants and animals that once lived on Earth are no longer found anywhere.</p> <p>Fossils provide evidence about the types of organisms that lived long ago and also about the nature of their environments.</p> <p>Scientists record patterns of the weather across different times and areas so that they can make predictions about rationale for extinction.</p> <p>KEY TERMS: life cycle, metamorphosis, organism, pups, trait, fossils, extinction</p> | <p>Identify similarities among organisms' common birth, growth, reproduction, and death.</p> <p>Classify organisms by trait.</p> <p>Analyze classified organisms to identify cause and effect relationships of parents' traits.</p> <p>Examine how inherited traits impact function of organisms.</p> <p>Investigate environmental factors that influence organisms and their traits.</p> <p>Use evidence to support the explanation that traits can be influenced by the environment.</p> <p>Support the explanation that traits can be influenced by the environment.</p> <p>Analyze fossils to explore organisms that lived long ago.</p> <p>Research organisms that no longer exist to identify environmental influence on extinction.</p> <p>Explore severe weather and environmental factors in current organisms that are at risk for extinction.</p> |
|--|--|--|

ASSESSMENT EVIDENCE: Students will show their learning by:

- Creating a model of a plant or animal life cycle
- Developing a plan for growing seeds by observing and researching patterns that affect an organism's traits and development (ex: effects of weather- hot and cold- on plant growth)

KEY LEARNING EVENTS AND INSTRUCTION:

- Identify and evaluate the common patterns in various lifecycles of plants
- Construct models of a plant life cycle
- Understand that a given plant's life cycle always happens in the same order
- Gather and analyze data to be used to support a claim that there is a patterns in how environmental conditions affect an organism's survival
- Develop ideal conditions in which to observe the life cycle stages of a mealworm (Mealworm Activity)
- Collect and interpret data based on parents of various plants and animals to find patterns and inherited traits
- Simulate patterns of inheritance from parents and interpret results of the simulation (Monster Traits)
- Gather data to investigate the effect of specific environmental factors such as heat and cold on the growth and development of plants

APPENDIX A: RESOURCES

Unit I:

Engineering the ABCs by Patty O'Brien Novak

Presents how everyday things work and how engineering relates to so many parts of daily life.

Iggy Peck, Architect by Andrea Beaty

Iggy Peck has been building fabulous creations since he was two. His parents are proud of their son, though sometimes surprised by some of Iggy's more inventive creations (like the tower he built out of used diapers). When a new second grade teacher declares her dislike of architecture, Iggy faces a challenge. He loves building too much to give it up! With Andrea Beaty's irresistible rhyming text and David Roberts' unique and stylish illustration, this book will charm creative kids everywhere.

How Do You Lift a Lion? by Robert Wells

Have you ever tried to lift a lion? Gravity makes it difficult, but you could do it with a lever. Robert E. Wells shows you how! Lively text and watercolors make you laugh while you learn the functions of levers, wheels and pulleys. Learn how to lift a lion, pull a panda, and deliver a basket of bananas to a baboon birthday party.

If I Built a Car by Chris Van Dusen

Jack describes the kind of car he would build--one with amazing accessories and with the capability of traveling on land, in the air, and on and under the sea.

11 Experiments That Failed by Jenny Offill and Nancy Carpenter

Is it possible to eat snowballs doused in ketchup—and nothing else—all winter? Can a washing machine wash dishes? By reading the step-by-step instructions, kids can discover the answers to such all-important questions along with the book's curious narrator. Here are 12 "hypotheses," as well as lists of "what you need," "what to do," and "what happened" that are sure to make young readers laugh out loud as they learn how to conduct science.

Unit II:

Fab Four Friends: The Boys Who Became the Beatles by Susanna Reich

In 1957 in Liverpool, England, a young lad named John Lennon and his band played music at a local church fair. In the audience was Paul McCartney, who liked what he heard and soon joined the group. Paul's friend George Harrison kept showing up at rehearsals until the older boys finally let him in. Eventually they found the perfect drummer, Ringo Starr, and the perfect name.

The Beatles Wilma Unlimited: How Wilma Rudolph Became the World's Fastest Woman by Kathleen Krull, David Díaz

A biography of the African-American woman who overcame crippling polio as a child to become the first woman to win three gold medals in track in a single Olympics.

Unit III:

Planting the Wild Garden by Kathryn O. Galbrath

A farmer and her son plant vegetables in their garden, and the wind carries a few seeds away. Birds and animals may carry some along with them on their travels. Sometimes the rain washes them away to a new and unexpected location. And sometimes something more extraordinary occurs, as in when the pods of the Scotch Broom plant open explosively in the summer heat, scattering seed everywhere like popcorn. Year-round, we all play a role in the dispersal of seeds throughout our landscape, planting the wild garden together.
