

ENERGY MANAGEMENT/EDUCATION

The Director of Facilities and Operations, under the direction of the Assistant Superintendent for Business and Support Services, is responsible for energy management within the facilities of the South Kitsap School District. Building principals and administrators are responsible for the prudent management of energy within their buildings. The maximum conservation of energy should be utilized in the daily operation of the heating, ventilating, cooling, and lighting of the school plant. Long-range plans for plant improvement are to include energy conservation. Minor modification or repairs by the Facilities Department, can reduce the use of energy. Staff and student training programs aimed at reducing the waste of energy are essential. Conservation of energy should be an essential factor in the scheduling of building usage.
