

“A samples” exceeded the action level, no “B samples” were analyzed. A table listing the analytical results by outlet sampled is included in Appendix B.

### Recommendations

With no detection above the action level at this school, no further action is recommended.

TRC appreciates the opportunity to assist MMSD with this project. If you have any questions or comments concerning this report, please call James at (608) 826-3666.

Notes:

1. Flush Sample (B) is only analyzed if the First Draw Sample (A) met or exceeded 15 ppb.
2. Service connection samples are flush samples (one per sample point), but sample IDs end with "A".
3. Sample was not able to be collected at sample point 7 (not working).
4. J indicates that result is less than the reporting limit but greater than or equal to the method detection limit, and the concentration is an approximate value.
5. The sample number is derived with the MMSD school identification number (e.g., 010) followed by a unique sample point identifier (e.g., 1, 2, 3, etc.). Fixtures with multiple taps include an additional locator (e.g., TAP 1, TAP 2). The first draw sample is then identified with the "A" suffix and the flush sample identified with a "B" suffix.
