Ash Tree

Erosion Control Demo

Mulberry

Wetland Area

Black Walnut

Chinquapin Oak - Largest of its kind in Avon!

Amphitheater

Eastern Red Cedar

Wikiup Lodge

Honey bee hive

Prairie Area

Honey Locust

Most of the ash trees at the OLC and in our area have been killed by the Emerald Ash Borer, a beetle that arrived in the US less than 15 years ago! Stop by and look at the info and the tree by the bridge. The maze like trail is where the beetle larvae have eaten the zylem of the tree. The zylem transports water and nutrients up the trunk of a tree.
