Maximum width for laminating posters is 24" wide.

Media Descriptions

36# Matte Paper

This is a medium weight paper and does not have a glossy finish. This is suitable for short-term display applications, as well as for economical images. This material should be laminated for protection.

10 mil - High Gloss Paper

This is a heavier weight paper that is suitable for long-term display applications. This paper has a water-resistant surface and **does not need to be laminated**.

Vinyl Banner

Super durable heavyweight banner vinyl is water and UV resistant to the elements. This material can be grommeted and slit for wind relief.

5 mil - Self-Adhesive Bond (white/clear)

A 36# matte surface paper, which is backed with a pressure sensitive permanent adhesive for easy mounting and display. This material is water resistant (not chemical resistant). This material would not be easy to remove and should be used for projects that will be there for a while and will not be re-adjusted.

Pre-cut Tag Board

This can be used for fast and simple signs. These come in a variety of colors and white.

Window Mounting Adhesive

To create a window display from any material.

It is applied to the printed surface of any piece so that it can be mounted to the inside of a window keeping the piece protected by the glass. The adhesive is virtually invisible and micro dot pattern allows any air to escape eliminating bubbles from forming.
