

# MATH 8

<b>Priority Standard 1: Operations with Rational and Irrational Numbers</b>	
<b>0</b>	<i>Little or no evidence of understanding of Rational and Irrational Numbers</i>
<b>1</b>	<ul style="list-style-type: none"> <li>Distinguish a rational number from an irrational number with help</li> <li>Identify decimals expansions of rational and irrational numbers with help</li> <li>Place irrational numbers on a number line with help</li> </ul>
<b>2</b>	<ul style="list-style-type: none"> <li>Identify rational numbers</li> <li>Identify decimals expansions of rational and irrational numbers.</li> <li>Place irrational numbers on a number line</li> <li>Perform radical addition/subtraction with like terms only ( <math>2\sqrt{6} + 6\sqrt{6}</math> )</li> </ul>
<b>3</b>	<ul style="list-style-type: none"> <li>Know that real numbers are either rational or irrational</li> <li>Understand that all numbers can be represented as a decimal and explain what distinguishes an irrational number from a rational number</li> <li>Convert a decimal expansion, which repeats eventually, into a rational number</li> <li>Compare, order and place irrational numbers on a number line</li> <li>Understand that a truncated expansion of an irrational number is an estimation and find increasingly more accurate placement of an irrational number on a number line</li> <li>Simplify radicals (ie <math>\sqrt{12}</math> <math>\sqrt{3}</math> , <math>\sqrt{8}</math>, <math>\sqrt{16}</math>, <math>\sqrt{27}</math> 3 )</li> <li>Perform radical operations and collect like terms (ie <math>\sqrt{6} (\sqrt{15} + \sqrt{6})</math>, <math>\sqrt{27} - \sqrt{12}</math>, <math>2\sqrt{6} + 6\sqrt{6}</math>)</li> </ul>
<b>4</b>	<ul style="list-style-type: none"> <li>Justify why a number is rational or irrational</li> <li>Explain the characteristics of rational and irrational numbers' decimal expansions</li> <li>Justify the process of converting a decimal expansion, which repeats eventually, into a rational number</li> <li>Justify placement, comparison and order of irrational numbers on a number line</li> <li>Estimate values of irrational numbers in decimals and explain why is it possible to find increasingly more accurate estimations</li> <li>Explain radical operations and collect like terms (ie <math>\sqrt{6} (\sqrt{15} + \sqrt{6})</math>, <math>\sqrt{27} - \sqrt{12}</math>, <math>2\sqrt{6} + 6\sqrt{6}</math>)</li> </ul>

<b>Priority Standard 2: Proportional Reasoning</b>	
<b>0</b>	<i>Little or no understanding of proportional and linear relationships</i>
<b>1</b>	<ul style="list-style-type: none"> <li>With help, identify whether a relationship is linear or proportional</li> <li>Identify the slope of a linear equation with help or inconsistently</li> <li>Identify the y-intercept</li> </ul>
<b>2</b>	<ul style="list-style-type: none"> <li>Identify whether a relationship is linear or proportional</li> <li>Identify the slope of a linear equation from various representations</li> <li>Identify the y-intercept</li> <li>Recognize that the slope is the same between any two points on a line</li> </ul>
<b>3</b>	<ul style="list-style-type: none"> <li>Explain the differences and similarities of linear and proportional relationships</li> <li>Identify the slope of a linear equation from various representations and understand the slope as the unit rate in a proportional relationship</li> <li>Identify the y-intercept and explains its meaning in a given context</li> <li>Explain why the slope is the same between any two points on a line using similar right triangle</li> </ul>
<b>4</b>	<ul style="list-style-type: none"> <li>Explain the differences and similarities of linear and proportional relationships</li> <li>Identify the slope of a linear equation from various representations and understand the slope as the unit rate in a proportional relationship</li> <li>Explain the meaning of a y-intercept in context from a variety of representations</li> </ul>

- Justify why the slope is the same between any two points on a line using similar right triangle

**Priority Standard #3: Simplify Expressions and Solve Equations**

<b>0</b>	<i>Little to no evidence of understanding simplifying expression and solving equations</i>
<b>1</b>	<ul style="list-style-type: none"> <li>Identify linear slope and y-intercept from an equation in the form <math>y = mx + b</math></li> <li>Solve linear equations and inequalities in one variable with limited accuracy</li> <li>With help, identify whether there are zero, one or infinite solutions</li> <li>Distinguish between linear and non-linear functions given a graph</li> <li>Construct scatter plots</li> </ul>
<b>2</b>	<ul style="list-style-type: none"> <li>Compare linear relationships using slope and y-intercept from the same representation (equation, table, graph, context, etc.)</li> <li>Solve linear equations and inequalities in one variable</li> <li>Identify whether there are zero, one or infinite solutions</li> <li>Distinguish between linear and non-linear functions given their algebraic expression or a graph</li> <li>Identify the slope of a linear function</li> <li>Identify an equation in the form <math>y = mx + b</math> as linear</li> <li>Understand a line as a relationship between two quantitative variables</li> <li>Construct scatter plots and draw the line of best fit</li> <li>Use the trend line to make predictions</li> </ul>
<b>3</b>	<ul style="list-style-type: none"> <li>Compare linear relationships using slope and y-intercept from a variety of representations (equation, table, graph, context, etc.)</li> <li>Solve linear equations and inequalities in one variable and explain the solution pathway</li> <li>Identify whether there are zero, one or infinite solutions and explain why this is the case</li> <li>Distinguish between linear and non-linear functions given their algebraic expression, a table, or a graph and understand that relationships with a constant rate of change are linear</li> <li>Understand the slope of a linear function as a constant rate of change, whose graph is a straight line</li> <li>Understand that every linear function can be written in the form <math>y = mx + b</math></li> <li>Construct a linear equation from multiple representations</li> <li>Construct scatter plots and use the graph to describe the relationship between two variables, including constructing the equation for the line of best fit</li> <li>Use the trend line to make predictions and understand what the rate and y-intercept represent</li> </ul>
<b>4</b>	<ul style="list-style-type: none"> <li>Compare linear characteristics of linear functions from a variety of representations (equation, table, graph, context, etc.) and explain why the comparisons are valid</li> <li>Solve linear equations and inequalities in one variable and explain the solution pathway and make connections between the solution and various representations</li> <li>Identify whether there are zero, one or infinite solutions and explain why this is the case</li> <li>Explain the distinction between linear and non-linear functions given their algebraic expression, a table, or a graph and understand that relationships with a constant rate of change are linear</li> <li>Understand the slope of a linear function as a constant rate of change, whose graph is a straight line</li> <li>Explain why every linear function can be written in the form <math>y = mx + b</math></li> <li>Understand a line as a relationship between two quantitative variables</li> <li>Construct a linear equation from multiple representations and make connections between representations</li> </ul>

- Construct scatter plots and use the graph to describe the relationship between two variables, including constructing the equation for the line of best fit
- Use the trend line to make predictions and understand what the rate and y-intercept represent

**Priority Standard 4: Represent and Analyze Relationships**

**0** *Italic for subtext Georgia 11 pt*

- |          |  |
|----------|--|
| <b>1</b> | <ul style="list-style-type: none"> <li>• Find the solution to small square roots</li> <li>• Simplify square roots with support</li> <li>• Use the Pythagorean Theorem to find missing side lengths in triangles with support or with errors</li> </ul>   |
| <b>2</b> | <ul style="list-style-type: none"> <li>• Find the solution to small square roots</li> <li>• Simplify square roots with errors</li> <li>• Perform operations with square roots with limited accuracy</li> <li>• Use the Pythagorean Theorem to find missing side lengths in triangles</li> <li>• Find the distance between two points on a coordinate plane by applying the Pythagorean Theorem with support</li> </ul>   |
