

Instructions for Completing Vision and Hearing Screening Summary Report

I received many forms with discrepancies in the counts – the numbers must add up.

Screened = total number of students in the grade that were screened for vision and hearing.

Referred for Suspected Defect = redundant though it is, you need to break down the numbers by gender and then total it. **Boy + Girl** must = **Total** for each category

No Report Following Referral + Number of Those Referred Seen by a Health Care Provider should = **Number Referred for Suspected Defect**, again broken down by gender (and the total of genders must equal Boys + Girls).

of Those Seen Diagnosed by Health Care Provider needs to be less than **Number Referred for Suspected Defects** if you enter any into **# No Report**.
