Health and Safety Plan: Symptom Screening and Reporting - Students

Definitions

Close Contacts are individuals who have been exposed (within 6 feet distance for at least 15 consecutive minutes) to someone who is positive for COVID-19 during the infectious period. **Exception:** In the K–12 indoor classroom setting, the close contact definition excludes students who were within 3 to 6 feet of an infected student (laboratory-confirmed or a clinically compatible illness) where

- o both students were engaged in consistent and correct use of well-fitting masks; and
- o other K–12 school prevention strategies (such as universal and correct mask use, physical distancing, increased ventilation) were in place in the K–12 school setting.

This exception **does not apply** to teachers, staff, or other adults in the indoor classroom setting.

Isolation is used to separate people infected with the virus (those who are sick with COVID-19 and those with no symptoms) from people who are not infected. People who are in isolation should stay home until it's safe for them to be around others. In the home, anyone sick or infected should separate themselves from others by staying in a specific "sick room or are and using a separate bathroom (if available).

Quarantine is used to keep someone who might have been exposed to COVID-19 away from others Quarantine helps to prevent the spread of the disease that can occur before a person know they are sick or if they are infected with the virus without feeling symptoms. People in quarantine should stay home, separate themselves from others, monitor their health, and follow directions from their state or local health department.

COVID-19 Visual Symptoms:

- Nasal congestion, scratchy/sore throat, allergy like symptoms
- Difficulty breathing or shortness of breath
- Persistent cough - a cough is frequent and severe enough to catch the attention

When to Seek Immediate Emergency Medical Attention

When to Seek Immediate Emergency Medical Attention

If there are any of these emergency warning signs* for COVID-19, medical attention is needed immediately:

- Trouble breathing
- Persistent pain or pressure in the chest
- New confusion or inability to arouse
- Bluish lips or face

** This list is not inclusive. A medical provider should be consulted for any other symptoms that are severe or concerning.*

Call 911 or call ahead to your local emergency facility: Notify the operator that you are seeking care for someone who has or may have COVID-19.
