Requiring the participation of all students, these opportunities can either occur as planned journeys for one or more days away from our campus, or they may occur as a workshop opportunity at the school. Properly planned and executed experiential education must:

- Supplement and enrich classroom procedures by providing learning experiences in an environment outside of the classroom.
- Help students relate school experiences to the reality of the world outside of the school.
- Give students the opportunity to study and explore real situations and processes in their actual environment.
- Inspire new interests among students.
- Involve group interaction, team building, and reflection.
- Integrate different areas of the curriculum, allowing students to apply what they learn in school beyond the classroom setting.
- Enhance students' education and passion for learning.
