RE: **RADON IN THE AIR TESTING**

ISAAC would like to provide you with notification that initial radon-in-air testing will be conducted the week of January 28, 2008. According to Connecticut General Statutes 10-220(d), schools are required to inspect and evaluate the indoor air quality of the school buildings by 2008. This required inspection and evaluation of indoor air quality includes evaluation of radon in air and water.

Environmental Transactions, Inc., will conduct the radon testing. To test for radon in air, small canisters containing charcoal will be placed in each of the occupied rooms that are in contact with the ground. These canisters will be left in place for three school days. You will be informed of radon test results and interpretations as soon as possible. If high radon levels are found, steps will be taken to correct the problem using methods suggested by the United States Environmental Protection Agency.

Please read the enclosed educational pamphlet describing radon and the school testing program effort. If you have further questions or concerns regarding radon, please feel free to contact the Ledge Light Health District at (860) 448-4882, or the State of Connecticut Department of Public Health Radon Program at (860) 509-7367.
