

## Introducing sunZapp

sunZapp is a smartphone app that makes it easier for you and your kids to have fun in the sun without getting burned. How many times have you been outside with your children, doing yard work, watching sports, or riding a bike, and you've forgotten to apply or reapply your sunscreen? Ouch! sunZapp takes the guesswork out of sun protection. sunZapp's sun protection advice is based on your location, environmental conditions, elevation, sunscreen SPF, clothing, and UV Index forecast.

You can download a free version of sunZapp in the [iTunes](#) and [Google Play app stores](#). Or you can purchase the deluxe version, sunZapp Pro, which allows you to take sun safety to the next level! The sunZapp Pro version allows you to run multiple users, like your children, at the same time, making it easy to keep your family safe. Each user can store up to 5 different profiles, which can be customized for your favorite outdoor activities. sunZapp Pro also includes a 5-day planner, allowing you to plan your sun protection for upcoming outdoor activities.

### sunZapp features include:

- **Personalized real-time data** - sunZapp uses NOAA's hour-by-hour forecast to provide real-time sun protection advice for your profile.
- **Timer and alerts** - sunZapp times your UV exposure and sends helpful alerts about when to reapply sunscreen or get out of the sun so you can avoid a painful sunburn.
- **Sun protection tips** - sunZapp gives advice about cover-up clothing, sunglasses, hats and shade.

### New for sunZapp Pro:

- **Multiple profiles** - sunZapp lets you set and store multiple profiles for yourself and your family.
- **Planning function** - It helps you plan for an event or trip up to five days in the future.

sunZapp was created by scientists with funding from the National Cancer Institute and tested for accuracy and ease of use with people all across the country.

Have a sun safe day!
