WorkForce Data Collection Terminals

Lower payroll costs by streamlining job data collection

Provide secure, convenient, and reliable ways for employees and contractors to enter time and job data. From biometrics to weatherized terminals for heavy duty work environments, we can meet any range of business and operating requirements. Further, a host of badge readers—including magnetic stripe, barcode, and proximity designs—support time entry, multiple assignments, labor distribution, and more, all with a simple swipe.

1. The WorkForce 1000 Terminal can support approximately 3 lines and 20+ characters per line, depending on the font size.
2. The WorkForce 5000 features an optional weather-resistant enclosure for exterior terminal installations. The optional environmental enclosure ensures the clock is operational in temperatures as low as -18°C (0°F).
3. The operational battery backup is similar to a UPS, enabling the terminal to accept transactions during a power outage. Transactions are stored on the terminal if network connectivity is lost and transmitted upon network restoration. 200,000+ transactions can be stored on a single terminal during a network or power outage. WorkForce 1000, 4050 and 5000 battery backup will provide power for up to 1.5 hours during an extended outage.
4. Available options dependent on screen size.
5. WorkForce 4050 and 5000 support all Tier 1 languages. WorkForce 1000 supports English, Spanish, and French. Other languages are available at a translation fee.
