To Whom It May Concern,

My mission as an educator is to build a safe and challenging environment in which all students can succeed and excel in 21<sup>st</sup> century skills. It is my lifelong goal to make sure that students are achieving high levels of performance as well as building collaborative techniques to compete in the ever-changing demands of the world. I believe all students should learn through a variety of experiences and should learn how to reflect and expand on any new or previous knowledge. It is my belief that all students will learn to be committed to the ongoing process of learning and that these skills and attributes attained will help create lifelong learners and entrepreneurs. I want to make sure that all students have a drive and motivation to help within the community and to build strong relationships and special bonds with community members. It is imperative that students tap into their special abilities and raw potential, and surpass any challenges or obstacles that lie ahead. I plan on creating individuals who are ready to achieve higher levels of thinking, inquiry, and problem solving skills, not only to succeed in the classroom, but to accomplish any and all future endeavors. I also want to make sure that students question and research topics they are interested in, and search for the meaning of their existence. I push every day to make these goals realities and I will work to positively

change the future and all it entails. I plan on attaining these goals through building strong relationships with students and family members and will use the many different tools of differentiation to reach all learners. I plan to bring engagement and excitement by including topics that interest students, by offering multiple forms of representation, and including many different technology tools and manipulatives into the classroom. I will make sure to work with peers and colleagues to push myself to the best possible outcome and will study to learn more about the field of education every day.

Thank you,

Stergios Marou
