

## How to “Disable” Startup Programs

1. Press CTRL+ALT+DEL
2. Select Task Manager
3. *On the bottom left click More Details if you do not see the Processes/Performance/Startup tabs*
4. Select the **Startup tab**
5. Click the application to highlight then click Disable on the bottom right
6. Status should be Disabled now
7. Repeat steps 5 and 6 to disable more applications
8. Restart the device

## How to “End Task” for Running Programs

1. Press CTRL+ALT+DEL
2. Select Task Manager
3. *On the bottom left click More Details if you do not see the Processes/Performance/Startup tabs*
4. Select the **Processes tab**
5. Scroll down to find SKYPE under the Background process list (*if it is not there then it is not running. Close the Task Manager window.*)
6. Click the application to highlight then click End Task button on the bottom right (Note: there may be more than one task running for the same application and you will need to “end task” for each of them)
7. Status should be stopped
8. Restart the device
