

Did you know that your child has online access to more than 155,000 digital resources through Discovery Education? Your child's account provides access to award-winning content from Discovery Networks and educational producers including: instructional videos, skill builders, games, audio files, images, writing prompts, and encyclopedia articles! While teachers integrate Discovery Education resources into classroom instruction, your child's online experience in Discovery Education is truly student-centered. Encourage your child to explore their interests, build background knowledge through their research, explore both print and digital media, and even produce their own content using Board Builder.

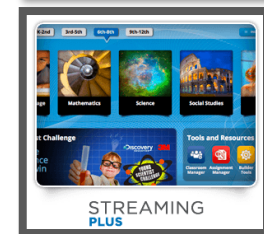

Once logged into Discovery Education, use your student dashboard to explore. The Resource Center provides you direct access to Science Techbook, Streaming Plus, and Board Builder.

Science Techbook provides virtual labs, videos, photographs, an interactive glossary, and nearly 2,000 hands-on labs and activities to engage your child and understand the relevance of science in everyday life. Simply select your child's grade level and unit to explore further.

Streaming Plus provides videos, interactives, skill builders, songs, eBooks, content collections, images, games and more to explore Language Arts, Mathematics, Social Studies, Science, Art, World Languages, Careers, and Health.
