

Get vaccinated!

Pfizer vaccine approved for children ages 5-11

The Pfizer vaccine will help keep you safe.

The FDA has issued an extension of the Emergency Use Authorization (EUA) allowing use of the Pfizer-BioNTech COVID-19 vaccine to prevent COVID-19 in individuals 5 years of age and older. COVID-19 vaccine can be given at the same time as other routine vaccinations.

COVID-19 vaccination is an important tool to help us get back to normal.

The vaccines teach our bodies how to recognize and fight the virus that causes COVID-19. COVID-19 vaccines are safe and effective at preventing COVID-19, including severe illness and death. Fully vaccinated is defined as two weeks past your second dose of the Pfizer vaccine.

Play sports!

No more missing games, practices or other extra-curriculars! You won't be sidelined from your favorite activities if you are up-to-date on your COVID-19 vaccinations, so long as you don't develop symptoms.

Go to school!

If you are up-to-date on your COVID-19 vaccinations, you won't have to miss important lessons or tests to quarantine if you're a close contact of someone with COVID-19 as long as you remain symptom free and wear a mask around others for 10 days after exposure.

What changes once you are vaccinated:

- ✓ You can resume activities that you did prior to the pandemic. Masking is still recommended in areas of substantial or high transmission.
- ✓ If are up-to-date on your COVID-19 vaccinations, you do not need to quarantine if you've been around someone who has COVID-19 as long as you remain symptom-free and continue to wear a mask around others for 10 days after exposure.
- ✓ If you travel in the United States, you are not required to get tested before or after travel or self-quarantine after travel.
- ✓ Make sure you are up-to-date on your COVID-19 vaccinations to keep yourself protected. People 12 to 17 are eligible for a booster dose if at least 5 months have passed since they completed their primary series.

Prevent COVID-19

Children can get sick with COVID-19 and spread the virus to others, even if they don't have symptoms. Most children with COVID-19 have mild symptoms or have no symptoms at all. However, some children can get severely ill from COVID-19. They might require hospitalization, intensive care, or a ventilator to help them breathe. In rare cases, they might die. Experts are also investigating a rare but serious medical condition associated with COVID-19 in children called
