

LWHS PAC Rigging

The Lake Washington High School PAC has a fairly small fly system with limited flexibility and limited space to hang additional items for your event. All rigging must be cleared with the Theater Manager prior to booking the rental. All rigging must be done by our staff. Human flying effects are not allowed. We reserve the right to refuse to hang anything we believe to be unsafe. Below you will find a few notes about the most important items. Page two includes the full lineset schedule.

Proscenium: The proscenium opening is 41' 9" wide.

Grand Drape: The Grand drape is hung 15" upstage of the proscenium. The grand is a luxurious purple velour.

Projection Screen: 21' wide x 12' high Located 2'2" behind the proscenium and 7" upstage of the Grand Drape. When flown in, the projection screen fills the entire stage, it is not possible to fly it in partway and still perform underneath or behind it. When flown in for use, only the apron of the stage will be visible to the audience.

Linesets 5 and 6: These two battens are empty and available for use. A great location to hang overhead decorative items however larger items will create shadows on the stage and/or cyclorama. They have a maximum capacity of 1,043lbs each. Lineset 5 is located 7' 7" upstage of the proscenium (6' upstage of the grand drape). Lineset 6 is located 8' 2" upstage of the proscenium (6'7" upstage of the grand drape).

Mid Stage Traveler: The Midstage Traveler is black and located 16' 3" upstage of the Proscenium.

Black Scrim: The Scrim is hung just behind the mid at 16' 10" upstage of the Proscenium.

Rear Traveler: The Rear Traveler is black and located 26'11" upstage of the Proscenium. The LED cyc lights can alter the appearance of the rear traveler to a variety of interesting rich colors.

Empty Rental Drop Lineset: Located between the Rear Traveler and the Cyclorama there is an empty lineset for you to hang a rental drop (it is also a good location for a large sign or banner). The recommended Rental Drop size is 20'H x 50'W. Taller drops will not be able to fly all the way out and the top of the image will not be visible from the audience. At 50' wide we lose a few feet of image on each side, but there are no chances of gaps.

Cyclorama (Cyc): Located 28' 1" upstage of the proscenium. The LW PAC features a very high quality white Cyc. Paired with our LED Cyc lights, it can create some beautiful and dramatic looks. The cyc is very fragile.

See Page two for full lineset schedule...

Full Lineset Schedule

Line Set	Description
1	Grand Border
2	Grand Drape
3	Projection Screen
4	1st Electric
5	Empty - Capacity - 1043lbs
