

How to vCast

What is vCast?

- vCast allows you to screen share your device wirelessly
 - Note: It's not designed for more intensive interactivity like Savass, Jamboard or Kami.
 - PC: you have the option btw share screen or extend mode

Step 1: Launch vCast Receiver on Flat Panel

- Click on the vCast Receiver icon from the home screen on the flatpanel.

Step 2: Launch vCastsender application on your PC or Mac

- Click on the vCast sender app from your device applications

Step 3: input code

- Type in the code from your flatpanel into the vCast Sender application and click OK
- Note: you will need to do this daily

Step 4: Click Cast

- Click Cast to share your screen
- Note: Disconnect your screen when you are done with the day
- Note for PC: Pcs will have a drop down menu under the word Cast. This will allow you to choose between screen share and extended mode.
