

Questions from Zoom chat: KPS School Based Health Center Informational Session on 2/7/22

Where would student medical records be held?

Access to the SBHC space will not compromise any patient privacy as no protected health information will be accessible in the SBHC space when staff are not present.

All treatment provided to students at the SBHC is documented in the electronic health record maintained by Generations Family Health Center, and is secured by the SBHC staff.

What about medical questionnaire type things? Will those be administered?

If, during the course of treatment, the student and family wish to share any of the protected health information included during treatment with the Killingly High School staff or any other party, the matter will be discussed with the student and family and an appropriate HIPAA release of information form will be completed to support the sharing of information.
