EXPOSURE CONTROL PLAN FOR BLOODBORNE PATHOGENS

4319.42

As part of its commitment to provide a safe and healthful work environment, the Board of Trustees recognizes the importance of developing an exposure control plan. The Superintendent or designee shall establish a written exposure control plan in accordance with state and federal standards for dealing with potentially infectious materials in the workplace to protect employees from possible infection due to contact with bloodborne pathogens, including but not limited to hepatitis B virus, hepatitis C virus and human immunodeficiency virus (HIV).

The Superintendent or designee shall determine which employees have occupational exposure to bloodborne pathogens and other potentially infectious materials. In accordance with the district's exposure control plan, employees having occupational exposure shall be offered the hepatitis B vaccination.

Universal precautions shall be observed throughout the district to protect employees in the work place from contact with potentially infectious blood or other body fluids.
