

PLAYGROUND EQUIPMENT INSPECTION

721.2

The Board of Education’s safety committee, in conjunction with the director of buildings and grounds and building principals, will recommend acceptance of all playground equipment designs. The schematic for requested equipment must be submitted to the safety committee by the school administration or parent groups.

The safety committee, director of building and grounds, and building principal will inspect the playground site and check for:

- a) compliance with safety standards.
- b) proper implementation of playground area design and available space,
- c) prevention of interference between groups or activities,
- d) easy facilitation of supervision,
- e) consideration of needs of and ages of the students, and
- f) utilization beyond the school day and school year (older or younger children, vandalism, etc.)

After study, the safety committee will make a recommendation to the Board whether to accept or reject the equipment. If accepted, the playground equipment must be inspected by the building principal at regular intervals and by the maintenance staff every month.
