

# Downloading VMWare Horizon for Windows

This document will walk you through steps to install your VMware Horizon client.

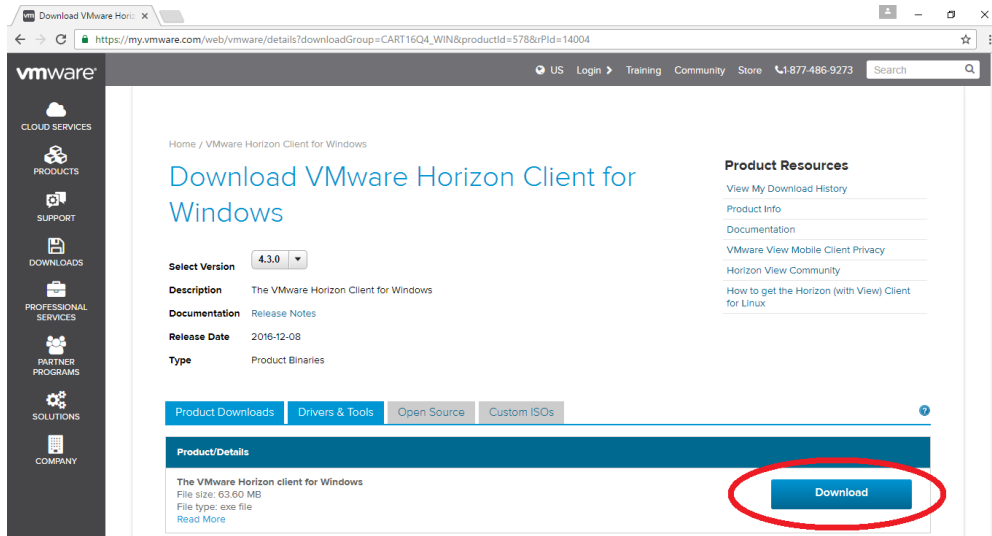

1. open your browser and enter in the address bar: <https://pikeview.pike.k12.in.us/>
2. Find and select **“Install VMware Horizon Client”**.

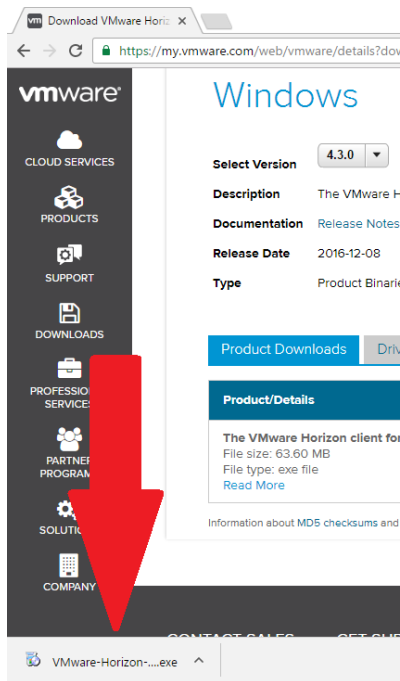

3. Locate and find **“VMware Horizon Client for Windows”**, then locate the **“Go to Downloads”** link in the same row.

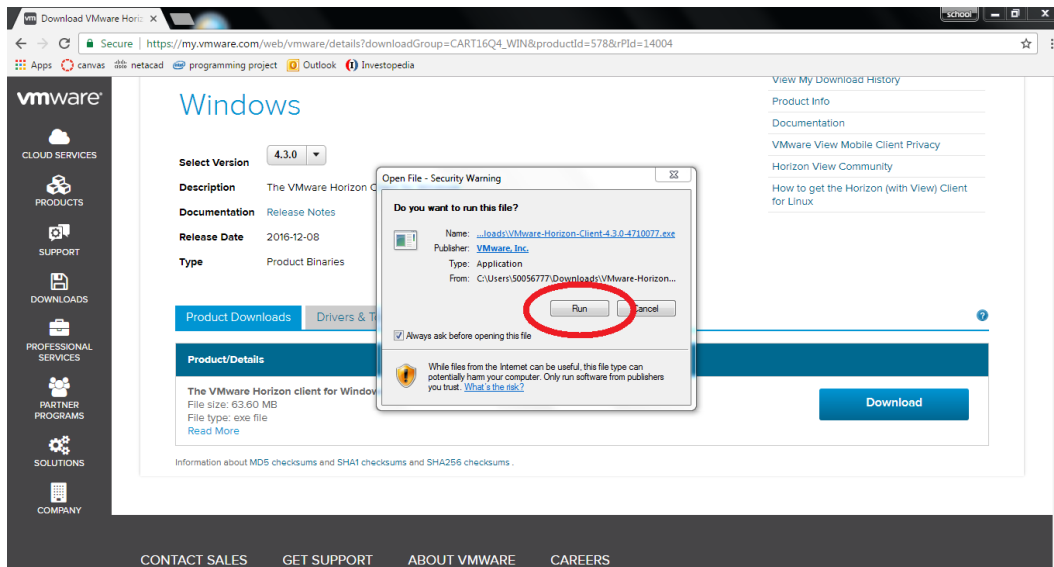

3. Click the **“Download”** button on the right hand side of the web page. The file will download and appear in the bottom left corner.

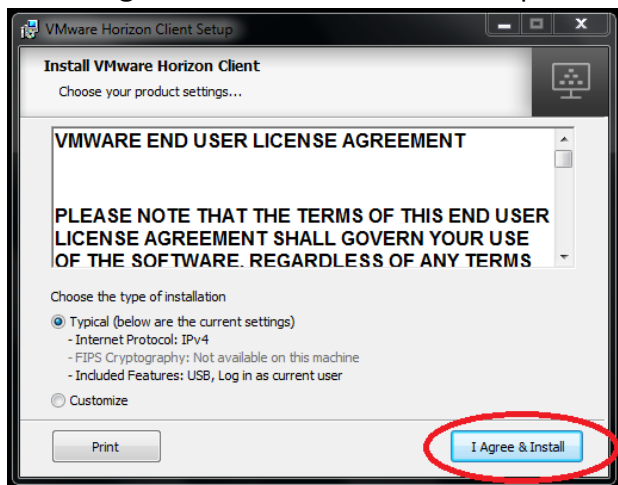

4. Select the downloaded file.

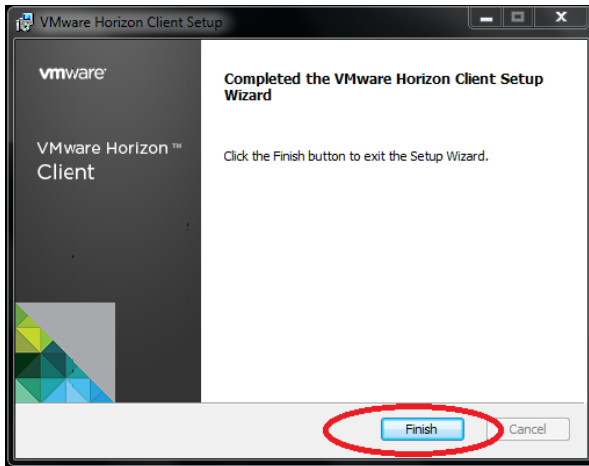

5. Click the “Run” Button.

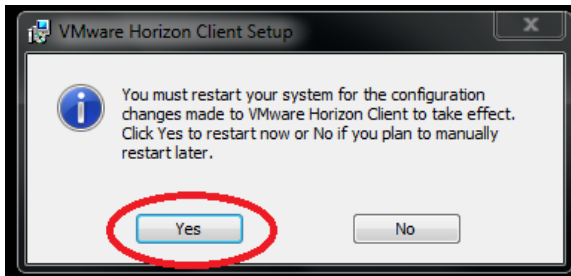

6. A window with the terms and conditions will appear. Leave all settings at default and click “I Agree & Install” the installation process will begin and may take a few minutes.

- When the installation finishes, a window will appear to inform you about the installation and you will click **“Finish”** to close the window.

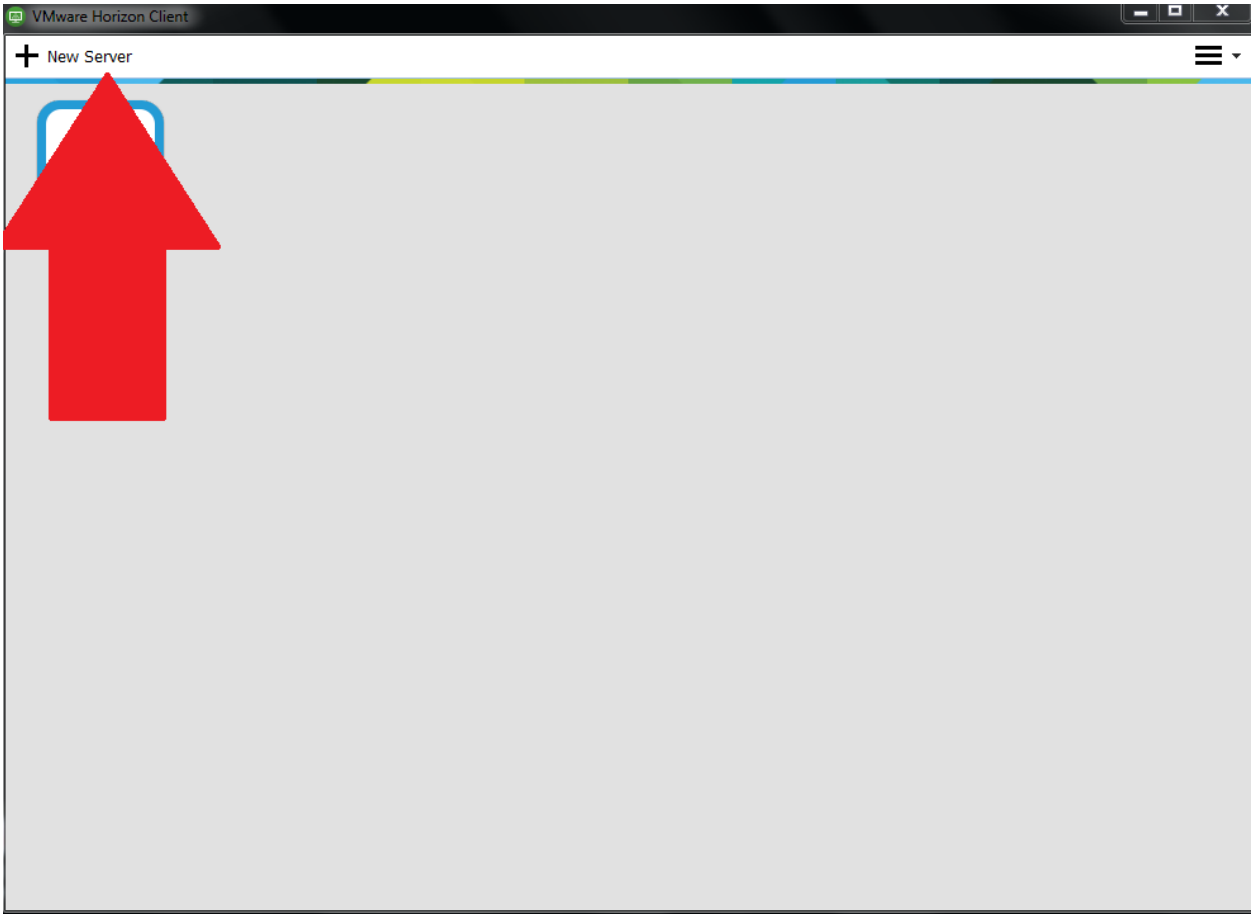

- Another window will appear to restart your computer, select **“Yes”**, this will allow the changes to be applied when the computer restarts.

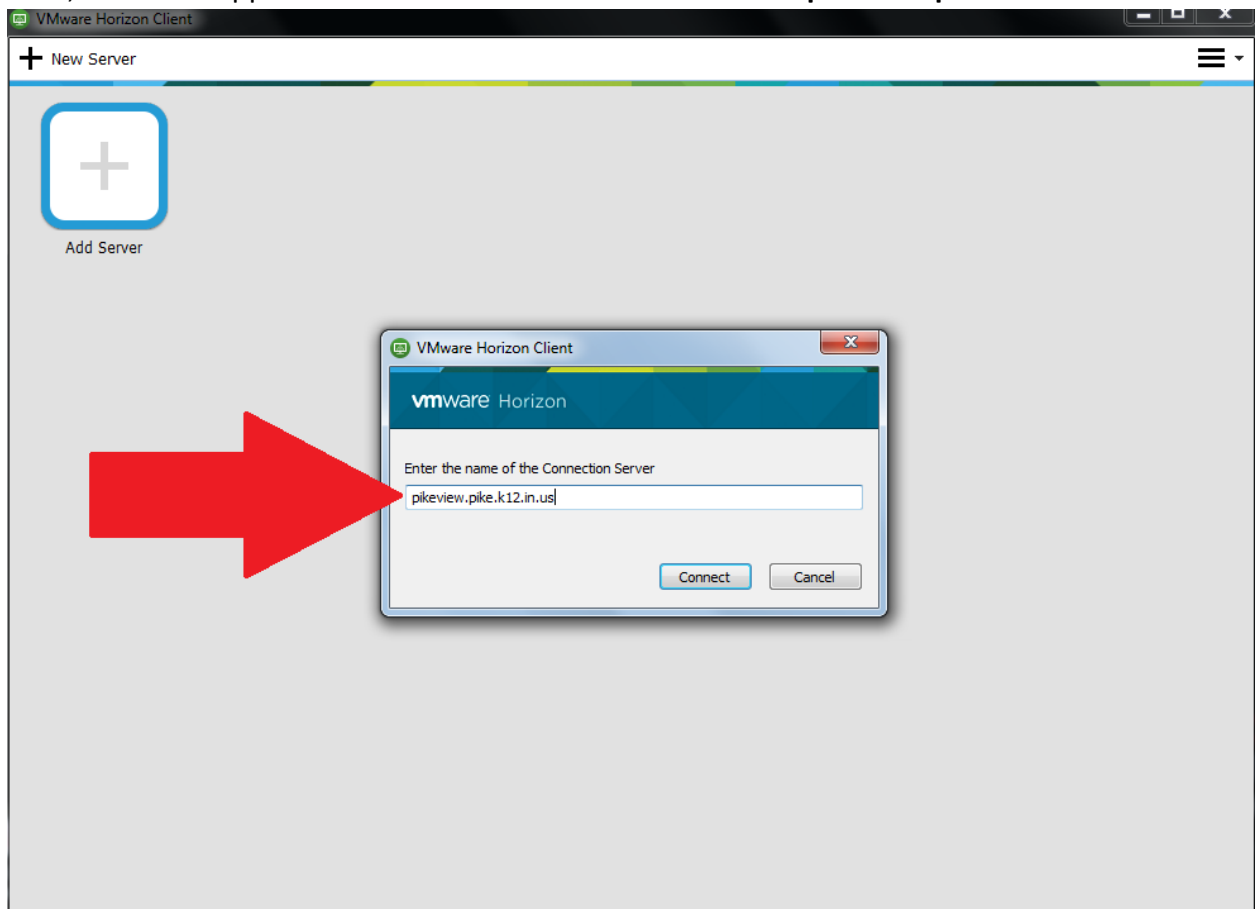

- When the computer is reboots, locate the application on your desktop and double-click it to launch the application.

- When the application is launched, select New Server in the top left corner.

11. Next, a text will appear to enter the server destination. Enter **pikeview.pike.k12.in.us**

12. Finally, when asked to login, **enter the information used to login to your local account.**
