

Downloading VMware Horizon on an Android device

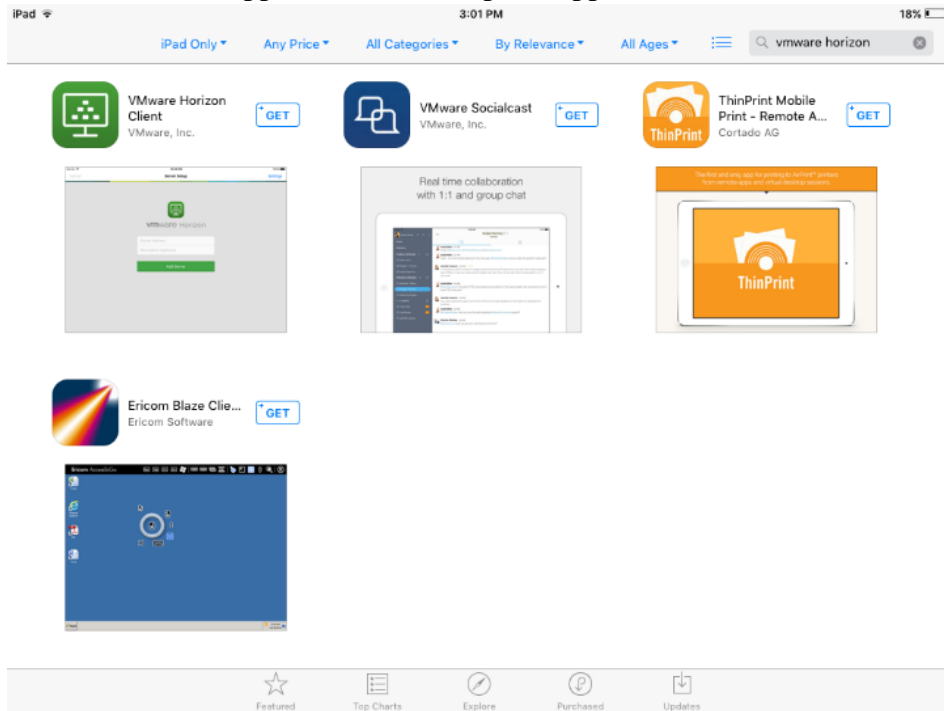

1. Open the **Apple store**.

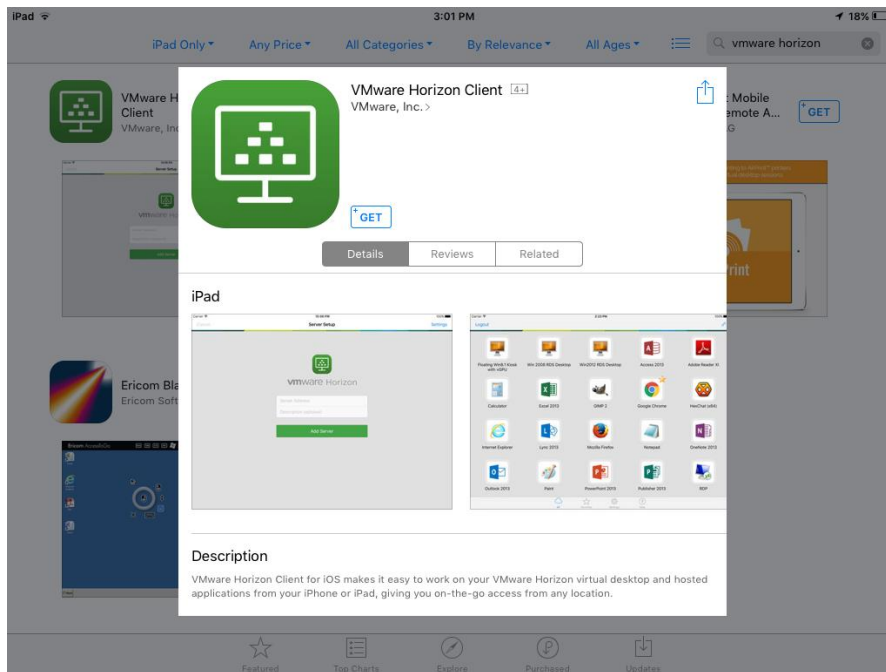

2. Search for **VMware Horizon Client** in the search bar.

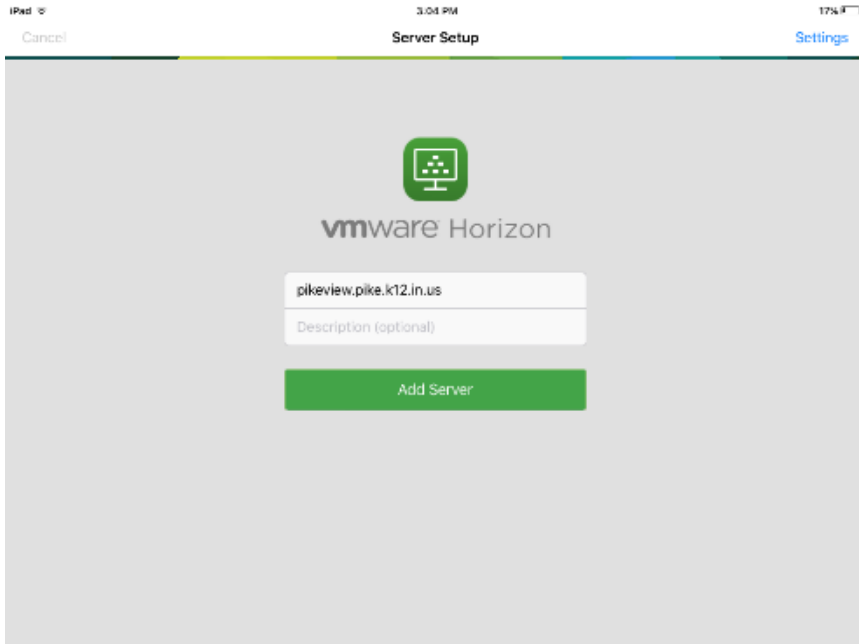

- When the results appear, select the top left app labeled **VMware Horizon Client**.

- Click on the app, select **Get** and then select **Install**.

- When the application finishes downloading and installing, launch the application.
- When the app finishes loading, you will be instructed to add a server name. Enter **pikeview.pike.k12.in.us** as the server address.

7. You may leave the description text box blank if you wish.
8. When the application connects to the server you will be asked to log in, this is where you **use the information used to login to your local account.**
