Re: RFP 21-03 Website Redesign & Hosting Services

ADDENDUM 1

VENDOR QUESTIONS & ANSWERS

1. Within the Technical Requirements section it states that any proposed solution should be able to integrate with ESRI's GIS platform. Can you provide specific examples of what type of integration is desired with the ESRI platform? Is there a specific use case that is desired by the district? ESRI provides a wide variety of services and we want to be clear on how the data needs to be integrated.

The SPS would like the ability to use GIS data for applications like looking up school districts and searching which schools would service a particular address. The school district has this information in the form of shape files or web service.

A use case would be that a user would enter their street address and our GIS service would return schools and other data like bus routes to the requesting application. That data would be displayed on a map that would show the locations of any fixed address (like schools) or tabular data for things like bus routes.

2. With FedEx and other courier services experiencing lengthy delays with their deliveries which presents an added risk of not being able to deliver our response to you on time, are we allowed to submit our response electronically either via email or a portal that you provide?

Please follow the requirement for Proposal Submission on page 16 of the original RFP.

3. Will there be any amendments with respect to proposal submission due date?

Questions for the RFP are due in by March 5, RFP due date is March 16 which is in the 10 day time line.
