

AP Physics 1

Summer Assignment Instructions

Hello, and welcome to AP Physics 1 class!

AP Physics 1 is an algebra-based, introductory college-level course that explores the topics of kinematics, dynamics, circular motion, gravitation, energy, momentum, simple harmonic motion, torque, and rotational motion. In order to review the basic skills necessary to succeed in this course, I am asking that you complete the attached summer review packet.

Please print out the document double-sided, put your name at the top, and complete the answers directly on the packet. You may show your work in the margins or on separate paper. Since your AP Physics 1 course will be in the spring semester, this assignment will be collected the first day of the spring semester. Do your best because this will count as your first grade of the semester.

If you have any questions, please let me know. I look forward to working with you next year!

Sincerely,

Mrs. McDonald
