

CANTERBURY SCHOOL

Dear Parents and Students,

This letter is to inform you of the computer options available to students. Though a limited number of chromebook computers are available in Steele Hall and the Steers Center, most students find that owning their own computers makes use of the Canterbury network more convenient. The information provided will help guide you through the process of deciding what kind of computer to purchase, or, if you already own a computer, what you will need to make it work on our wireless network.

Before students gain access to the school network, they will need to read and acknowledge a Network Account Information form at registration. This online form asks students to acknowledge that they have read and have understood Canterbury's Acceptable Use Policy and Social Media Policy. The Acceptable Use Policy and Social Media Policy are posted on our website and can also be found in the Student-Parent Handbook. In addition, students will have to register their computers and/or network capable devices with the school before they will be able to use our network. Students are permitted to register 4 devices. They can do this from any campus building via a web page that will automatically load when they open their computer's or device's web browser. The Technology Department will help a student if necessary.

Our secure wireless network will provide wireless connectivity to our academic network and to the Internet from every building on campus. Our wireless network allows students to connect to the network from their rooms, allows them to roam within buildings without losing their network connections, and to print to networked printers located in each dorm common room, Steers Center and in the library. To be connected to the Canterbury network, a student's computer or device will need to be wifi compatible.

The Canterbury Technology Department will help students negotiate their initial connection to the wireless network but can offer only limited technical support options beyond accessing the network, printing and logging into their Canterbury Google and Veracross accounts. If the computer's operating system is not set to use English, we can not help. We cannot repair computers with faulty or broken hardware, and in such cases, we will do what we can to help but may have to refer the student to the manufacturer or vendor for repairs. Students can avoid most computer problems by having their computers ready for our network. If during the summer, they perform periodic operating system and software updates, the process of setting up and registering their computers for use on the school's network should be very easy. Windows computers need up-to-date anti-virus software. If the computer has a trial version of an antivirus program, you should buy a subscription to make sure the program will continue to work throughout the school year. Recommended anti-virus programs are listed at the end of this letter.

After the students have set up and registered their computers on the school's network, they need to continue performing periodic software updates and anti-virus updates.

The school encourages families buying new computers to purchase a three-year onsite warranty with the computer. While many students use Macs, Dell offers discounts for Canterbury students at: <http://www.dell.com/mpp/CanterburySchool>. Additionally, the school recommends that families insure the computer against theft or damage.

Canterbury students will use the Veracross student portal to access class pages, assignments, grades, and other online content which is accessible through Canterbury's website; (<http://www.cbury.org>). Teachers post critical class information on Veracross and students are required to check each of their class pages daily. Instructions on how to access Veracross and how to navigate to critical information will be provided during the fall orientation period.

During this summer, we may update this letter and provide you other information that will make use of technology here at Canterbury successful. Should you have any questions as you consider purchasing a computer, feel free to call Rob Roffe, Canterbury's Director of Academic Technology and Innovation, at 860-210-3898, or email him at rroffe@cbury.org.

As always, if you have other questions, you may call me at 860-210-3899.

Sincerely yours,

A handwritten signature in blue ink that reads "m glaser". The signature is written in a cursive, flowing style.
