

Mt. Vernon Student Internet Report for Parents

Email will look like summary information below. Scroll down through the report to familiarize yourself with the information.

If you do not receive a report like the one below. One of two things could be happening:

- 1. Your student is possibly NOT using the school issued device.
- 2. There is a problem with communication between your students school issued device application and the service that does this reporting.
- 3. Your student did not use their device for the week; this is possible especially for younger children at the beginning of the school year as well as during breaks (Fall, Winter, Spring).

If your report looks like this and you know your student used their device during the week, please contact the Mt. Vernon Technology Department and let us know the students name and that your report was blank (0%). We will do everything we can to correct the problem.
