Preface

This report updates population and housing trends within Hinsdale Township High School District 86 and assesses the implications of these trends for future enrollments at Hinsdale Central High School and Hinsdale South High School. As in previous reports, the objective is fourfold. First, I shall review residential development patterns and demographic dynamics underlying enrollment change in the District. Next, I shall assess annual enrollment changes in the K-8 feeder districts and the two high schools during the past twenty-eight years and analyze the sources of these enrollment changes. I shall then discuss the factors that will shape future enrollments at the high schools. Finally, I shall project enrollment for Hinsdale Central and Hinsdale South High Schools through school year 2029-2030, by grade and by year.

All enrollment projections will be in the form of three separate series based on different assumptions about future new residential development, housing turnover (including teardowns), and family migration to District 86. The three series will provide forecasts of (A) the absolute minimum number of students that may be anticipated, (B) the most likely number of students to be expected, and (C) the absolute maximum number of students that can be foreseen.

In conducting the analysis that follows, I benefited from data provided by administrators of District 86 and local school district officials. I would like especially to acknowledge Dr. Bruce Law, Superintendent of District 86, who assembled much of the information upon which this study is based. For his fine assistance, and that of all the others who participated in this endeavor, I am most appreciative.

Overview of Hinsdale Township High School District 86

Hinsdale Township High School District 86 encompasses 29 square miles, the majority of which lie in southeast DuPage County, with the remainder lapping over into western Cook County. The District has two high school campuses, Hinsdale Central and Hinsdale South, serving students in the grades 9–12.

Communities served by each District 86 campus are as follows.

1. The Hinsdale Central campus serves the village of Hinsdale as well as portions of Oak Brook, Clarendon Hills, Westmont, and Burr Ridge. The feeder districts are:

- District 53 — Butler
- District 60 — Maercker
- District 62 — Gower (only those who elect from option zone)
- District 181 — Hinsdale

2. The Hinsdale South campus serves portions of Darien, Willowbrook, and Burr Ridge. The feeder districts are:

- District 61 — Darien
- District 62 — Gower (majority)
- District 63 — Cass
- District 180 — Burr Ridge

Students from District 60 and District 61 split between Hinsdale 86 and Downers Grove 99. In addition, there is an optional attendance zone in the Gower area of District 62 from which students can elect to attend either District 86 campus, with the vast majority attending the South campus.

Moreover, there are seven parochial schools which send some students to High School District 86. For example, during the past school year, Central

enrolled 32 students from St. Isaacs's and South received 24 students from Our Lady of Peace (8 in the class of 2018 and 16 in the class of 2019).

The prospects of new residential construction within the 29 square mile area are limited since most land has already been developed. There has been significant regeneration of existing communities through teardowns and rebuilds, particularly in the Hinsdale and Clarendon Hills areas, and, most importantly, turnover of "empty nest" housing units to families with preschool and school-age children.

Review and Update of Housing and Population Trends

Like many of Chicago's well-established suburbs, the District 86 area experienced a flurry of new housing construction in the 1950s, 1960s, and 1970s. During these three decades, 2,230 existing homes were built in Hinsdale and 5,140 in Darien, while the village of Clarendon Hills added 1,472 of its existing units (see Table 1). The vast majority of these homes were single-family, detached structures containing three or more bedrooms. Furthermore, these homes were reasonably priced. Table 2 shows that as late as 1970 the median value of owner-occupied houses in Hinsdale was \$39,500; Darien, \$34,600; and Clarendon Hills, \$33,800.

The substantial amount of construction of moderately priced, detached homes during the 1950s, 1960s, and 1970s attracted large numbers of younger couples with preschool and school-age children to the District. Moreover, during this post war "baby boom" period, most of these couples had at least two children.

Table 3 describes the population trends since 1950 for the communities served by District 86. Between 1950 and 1970 Hinsdale nearly doubled from 8,676 residents to 15,918. Total population in Hinsdale stabilized until 1990, at which point it stood at 16,029. Growth resumed in the 1990s with Hinsdale's population reaching 17,349 in 2000 but fell back modestly to 16,816 in 2010. While Clarendon Hills also stabilized in population between 1970 and 1990, before growing again

through 2010, Burr Ridge continued to expand during this 40-year period as did Darien's with stability setting in after 2000. Oak Brook, which rapidly grew from 1960 to 1990, dipped in population during the 1990s and again between 2000 and 2010. Westmont (with only 5 percent served by District 86) steadily grew between 1960 and 2000, then essentially stabilized while Willowbrook, which also steadily rose from 1960 to 2000, dipped slightly between 2000 and 2010.

More important than total population numbers, are the changes in the preschool and school-age populations in District 86's communities. In Hinsdale, for example, preschool population began to decline in the late 1960s and continued to decline into the early 1980s as mortgage rates hit record highs. With mortgage interest rates falling in the mid-1980s and with growing numbers of empty-nest households, housing turnover accelerated and more young families began to move into the District, despite appreciating housing costs. Sustained lower interest rates, together with a solid rebound in the Chicago area economy, led to continuing housing turnover to younger families during the 1990s and through 2007 when the financial crisis slowed turnover dramatically. As a result, in Hinsdale, for example, preschool (under age 5) population grew from 1,240 in 1990 to 1,421 in 2000 while the population aged 5–9 mushroomed from 1,227 to 1,786 and those aged 10–14 expanded from 1,076 to 1,645. However, between 2000 and 2010 Hinsdale's preschool and early elementary school-age populations declined.

Table 3 also shows that despite increased housing turnover to younger families, the District has a substantial number of residents over age 65. This would suggest that, barring a new prolonged recession or return to high mortgage interest rates, there will be considerable housing turnover to younger families in District 86 during the next 15 years.

Along with robust housing turnover, District 86 has also experienced a modest amount of new housing construction through 2014. Table 4 provides numbers of annual single and multi-family unit housing permits authorized by localities from 1988 to May 2015. These new housing permit figures include teardowns and replacements. This phenomenon involves the razing of smaller, older homes and typically replacing them with larger four-bedroom-plus houses, many often occupied by younger families with preschool and school-age children. As housing values continued to appreciate and the area's schools and location remained highly attractive, teardowns became increasingly commonplace, first in Hinsdale then in Clarendon Hills where it is estimated that 90 percent of new homes represent replacement homes. With build-out being approached in other communities, as well, entirely new (non-replacement) construction is anticipated to be limited, though there are still some prospects for new housing development in the unincorporated sections of the District which send into South.

Enrollment Trends and Student Migration/Transfer

Enrollment trends in local public schools mirrored community demographic dynamics. Total elementary and high school enrollments mushroomed in the 1950s and 1960s. Enrollment growth in the elementary schools slowed considerably in the late 1960s and some started to decline in the 1970s. These declines continued until the mid-1980s, at which point most elementary district enrollments began to grow again. Total (combined) elementary district enrollments climbed from 6,481 in 1987–1988 to 10,102 students in school year 2004–2005. Combined elementary feeder districts enrollment then declined to 9,190 students in 2014–2015.

Hinsdale Township High School District 86 enrollment also rapidly increased throughout the 1950s and 1960s. Table 5 shows that total district enrollment, which stood at 780 in school year 1950–1951, climbed to 2,064 in 1960–1961 and to 3,970 in 1970–1971 (excluding special education students). District 86 enrollment continued to rise in the first part of the 1970s peaking at 4,427 students in school year 1975–1976. With the exceptions of school years 1977–1978 and 1984–1985, total district enrollment declined thereafter every year for the next sixteen years, dropping to 3,062 in 1991–1992. Between 1991–1992 and 2009–2010, total district enrollment climbed, with 4,580 students in Fall 2009.

After stabilizing near that number through Fall 2012, District 86 enrollment dropped modestly to 4,410 students in Fall 2014.

With District 86 enrollment swelling in the 1960s, the Hinsdale South campus was opened in the Fall of 1965 with 418 students. As classes were added in the following years, enrollment at South campus quickly grew to over 1,200 students by 1968–1969 and to nearly 1,800 students by 1972–1973. During the following seven years, enrollment at the South campus fluctuated mildly and peaked at 1,841 students in school year 1979–1980. Modest enrollment decline occurred over the next dozen years with South's student body bottoming out at 1,487 in 1991–1992. Enrollment then climbed back to 1,679 students in 1994–1995 before declining again for three years to 1,567 students in Fall 1997. Total enrollment at South then rose to 1,920 students in Fall 2005 before declining to 1,632 students in school year 2014–2015.

Enrollment at Hinsdale Central fluctuated around 2,450 students for the six years following the opening of Hinsdale South, then climbed to 2,630 students in 1973–1974 before commencing declines to 1,575 students in 1991–1992. Total enrollment strongly rebounded thereafter reaching 2,830 students in Fall 2012. After a modest decline in school year 2013–2014 (to 2,777 students), enrollment stabilized in 2014–2015.

Determinants of Enrollment Change

School districts are open demographic systems whose growth, stability, or decline is affected by two basic factors. The first is the difference between the size of the kindergarten (or for the high school district, ninth grade) class that enters each September and the size of the previous June's graduating class (either eighth or twelfth grade). The second is the net migration/transfer of school-age children in each district as they progress through the grades over the years.

Tables 6, 7, and 8 show how annual total enrollment change in the combined public elementary districts that feed students to District 86 may be decomposed into these two component parts since school year 1987–1988. Table 6 provides the grade-by-grade and year-by-year combined enrollment for the public elementary feeder districts. Table 7 decomposes the annual total enrollment changes into the two component parts. Thus, between September 2013 (school year 2013–2014) and September 2014 (school year 2014–2015), combined public feeder school enrollment declined by 93 students (9,283 to 9,190; see Table 6). The 1,199 eighth graders who left the public elementary districts in June 2014 (see Table 6) were replaced in September 2014 by just 926 kindergarten students, for a net class size difference of –273. However, 180 more students either migrated into the elementary school districts or transferred from

parochial schools than migrated out of the districts or transferred to parochial schools between September 2013 and September 2014.

Table 8 shows the grade-by-grade, year-by-year migration/transfer figures for the combined elementary feeder districts. For example, the “85” at the bottom of the K-1 column means that as the kindergarten class of school year 2013-2014 progressed to the first grade in school year 2014-2015, it gained 85 students via migration or transfer (see Table 6 where this class grew from 909 to 994 as it progressed upward one grade level). Likewise, as the first grade class of 2013-2014 (941 students) progressed to the second grade in 2014-2015 (976 students), it expanded by 35 students. Summing across the bottom row of Table 8 provides the K-8 net student migration/transfer between September 2013 and September 2014, which is +180.

Observe that strong net student migration/transfer has characterized the elementary feeder districts during the past six years. Between September 2008 and September 2014, the combined feeder districts added 1,265 students via positive net student migration/transfer. This represents a continuation of historic positive net student migration/transfer to the elementary feeder districts.

Appendix A provides enrollment histories by year and by grade for the past decade for each public elementary feeder district. It also presents the decomposition of annual sources of enrollment change for each district and their annual migration/transfer figures. These tables should be interpreted in the

same manner as Tables 6, 7, and 8 for the aggregated public elementary feeder districts.

Tables 9, 10, and 11 show how annual total enrollment change in Hinsdale Township High School District 86 since September 1987 may be decomposed into the two component parts. Table 9 presents the annual combined enrollment by grade for District 86 since school year 1987–1988. For example, between September 2013 (school year 2013–2014) and September 2014 (school year 2014–2015), District 86 enrollment declined by 77 students (from 4,487 to 4,410). The 1,108 twelfth graders who left the District in June 2014 were replaced in September 2014 by 1,101 ninth graders for a net class size difference of –7. In addition, between September 2013 and September 2014, 70 more high school students either migrated out of District 86, dropped out, or transferred to private/parochial schools than either migrated into the District or transferred from private/parochial schools (see Table 10). Between September 2012 and September 2013, combined high school enrollment declined by 78 students, from 4,565 to 4,487. This 78-student drop resulted from a 131-student smaller entering ninth grade class in September 2013 over the previous June's graduating twelfth grade class, and a positive 53-student net migration/transfer.

Table 11 describes how the net student migration/transfer (including dropouts) gains and losses were computed from the enrollment data. Again, the bottom left cell of –3 means that as the ninth grade class of September 2013

progressed to the tenth grade in September 2014, it lost 3 students (see Table 9 where ninth grade class size in school year 2013–2014 was 1,045 and the tenth grade class size in school year 2014–2015 was 1,042 students). Likewise, as the tenth grade class of September 2013 progressed to the eleventh grade in September 2014, it declined by 58 students. Summing across the bottom row in Table 11, one obtains -70, which is the net student migration/transfer loss shown in Table 10.

Tables 12 through 17 provide grade-by-grade enrollment histories and the decomposition of annual enrollment change since school year 1987–1988 at Hinsdale Central High School and Hinsdale South High School, along with the annual grade-by-grade migration/transfer analysis for each high school. The decomposition and migration/transfer tables should be interpreted the same as Tables 10 and 11 for the combined high schools.

The Enrollment Future of Hinsdale Township High School District 86

Now I turn to the critical issue: what will happen to enrollment at Hinsdale Central High School and Hinsdale South High School over the next 15 years? My analysis of the demographics of District 86 communities and their population projections, enrollment change in public elementary feeder districts, and likely future housing turnover and family in-migration lead me to forecast that enrollment at Central High School will remain near its 2,778 count for 2014–2015 during the coming year (2015–2016). Central's enrollment will then slowly decline to just under 2,600 students in 2020–2021 before rising to 2,700 students in 2024–2025 and stabilizing near that number through 2029–2030. Enrollment at South High School (1,632 in 2014–2015) will decline over the next eight years to just above 1,400 students in 2022–2023, then modestly rise to approximately 1,500 students between 2025–2026 and 2029–2030. Before elaborating upon these projections, let me describe the factors on which they are based and my methods used in the forecasts.

Table 18 provides information on birth trends to residents of communities served by District 86. While fluctuating within the communities, annual births have trended significantly downward in Darien, Clarendon Hills, and Hinsdale since 2000. These numbers would indicate that future kindergarten and

elementary school grade enrollments in the aggregate will go down in future years. One important factor, however, that should buffer future kindergarten (and elementary school) decline is the large number of homeowners over age 65, suggesting that more homes will turn over to younger families with preschool and school-age children during the next 15 years, particularly given the excellent reputation of District 86 area schools.

Since any changes in future resident births will not affect high school enrollment projections until at least school year 2028–2029, the most critical factor for future enrollment in the high schools becomes net student in-migration resulting from new housing in the District and from turnover of existing housing units. Considering that District 86 is near complete residential build-out, it is unlikely that significant new housing development will occur, though teardowns and replacement housing will also attract younger, larger families. I have also incorporated some scattered new housing development into the projections, including the unincorporated areas of the District that feeds into South High School.

The main factor impacting future enrollment at the high schools, thus, will be turnover of existing housing and resulting in-migration of families with preschool and school-age children. This should have a positive impact on population and school enrollments.

Such expectations are consistent with forecasts of District 86 community population and household growth by the former Northeastern Illinois Planning Commission (NIPC; now known as the Chicago Metropolitan Agency for Planning, CMAP). The NIPC projections (shown in Table 19) suggest that all District 86 communities will grow modestly in population size during the next 15 years with their 2030 forecasts indicating that Burr Ridge, Hinsdale, and Willowbrook will add the most residents.

Because future student migration patterns will vary most substantially, predicated on economic conditions and the degree of housing turnover, three sets of enrollment projections, by grade and by year through 2029–2030, will be provided for each high school campus. These projections will be presented in the form of separate series, based on the following assumptions:

- Series A:* Enrollment projection assuming turnover of existing housing units and family in-migration *are less than anticipated* through 2029–2030;
- Series B:* Enrollment projection assuming turnover of existing housing units and family in-migration *occur as anticipated* through 2029–2030;
- Series C:* Enrollment projection assuming turnover of existing housing units and family in-migration *are greater than anticipated* through 2029–2030.

The basic methodology used to make the three series of enrollment projections is a modified cohort survival procedure. Average cohort survival progressions were computed for each grade transition at each elementary feeder

district and high school levels for the past four years. These average survival progressions were then adjusted for particular year inconsistencies and applied to compute baseline enrollment projections (via conventional cohort survival techniques) for each elementary district. The sizes of future entering kindergarten classes were estimated using recent trends in kindergarten enrollment, birth registration data for the communities in District 86, and different assumptions about likely family in-migration.

The next step was to adjust projected enrollment each year in grades 1 through 8 for anticipated housing turnover (including teardowns and replacement housing) under the three sets of assumptions. Series A projections were made assuming an approximate fifteen percent decline in student in-migration rates (compared with Series B) resulting from less turnover than is currently anticipated. Series C projections assume greater housing turnover than currently anticipated resulting in student in-migration rates approximately fifteen percent higher than Series B.

It has been my experience in projecting high school enrollment that actual enrollment outcomes in the longer term have always fallen with the Series A and Series C parameters, and typically very close to Series B. For example, in my last report over 10 years ago, I projected (under Series B) that in school year 2014–2015 the Central campus would have 2,775 students (see page 43 of April 2005 report). Actual enrollment at Central in 2014–2015 was 2,778. My Series B 2014–

2015 projection for South campus was 1,714 students. Actual enrollment at South this past year was 1,632. Thus, the three series will provide, by year and by grade through school year 2029–2030, (A) the absolute minimum number of students that may be anticipated; (B) the most likely number of students to expect; and (C) the absolute maximum number of students that can be foreseen.

To project enrollment at each of the high schools it was necessary to allocate the eighth grade classes from the elementary feeder districts, parochial schools, and other sources to the appropriate high school. This was done based on detailed sources of ninth grade students to Hinsdale Central High School and Hinsdale South High School during the past three years. Eighth to ninth grade cohort transition ratios were developed based on source allocations to each high school for the past three years. The transition ratios take into account freshmen entering each high school from parochial schools and out-of-district move-ins of freshmen.

Tables 21, 24, and 27 provide the annual enrollment projections for Hinsdale Central High School, Hinsdale South High School, and the combined high schools by year and by grade through school year 2029–2030 under Series B assumptions. As before, these projections exclude hearing impaired and special education students attending out of district schools. If future housing turnover and family in-migration occur as anticipated, Table 21 shows that 2015–2016 enrollment at Hinsdale Central High School should be very close to its 2014–2015

figure of 2,778. Total enrollment at Central will then slowly drop to 2,593 students in 2020–2021 before rising modestly to 2,700 students in school year 2024–2025. Central campus will stabilize near that number through 2029–2030. Under these same Series B assumptions, Table 24 shows that total enrollment at Hinsdale South High School will decline from 1,632 in school year 2014–2015 to 1,409 students in 2022–2023. It will rise to 1,501 students in 2026–2027 and stabilize thereafter at just under that number.

Combined campus high school enrollment (Table 27) under the Series B assumptions (currently anticipated future student migration) will decline from 4,410 in 2014–2015 to 4,010 in 2020–2021. Total District 86 enrollment will bounce back to 4,214 students in 2025–2026 before settling down at just under that number through 2029–2030. It is my professional judgment that the Series B projections are the most likely for District 86 high schools.

If national and regional economic conditions again deteriorate in the future, or if mortgage interest rates go back to near double-digit levels, housing turnover and family in-migration to District 86 will no doubt slow below that presently anticipated. Under these more conservative (Series A) assumptions, Table 20 indicates that enrollment at Hinsdale Central High School will drop to 2,392 students in 2027–2028 and stabilize.

Under Series A assumptions, enrollment at Hinsdale South High School will experience annual declines, dipping to 1,249 students in 2021–2022 before

rebounding slightly and leveling off at about 1,300 students through 2029–2030 (see Table 23). Under the conservative Series A assumptions, Table 26 shows combined campus high school enrollment will decline to 3,684 students in 2020–2021 before stabilizing slightly above that number. To repeat, Series A represents the absolute minimum number of students that can be expected for District 86 in the short and longer term.

Under greater than anticipated family in-migration assumptions (Series C), Table 22 reveals that Hinsdale Central High School enrollment will grow to 2,803 students in 2015–2016. Central's enrollment will remain near that number through 2022–2023 after which it will expand to 2,904 students in 2025–2026 and stabilize. Under these same accelerated housing turnover and family in-migration assumptions, Hinsdale South High School will still drop to 1,563 students in 2016–2017 before rising to 1,753 students in 2026–2027 (see Table 25). Combined campus high school enrollment, using the Series C high-growth assumptions, will dip to 4,360 students in 2016–2017 and fluctuate near that number through 2022–2023. Total District enrollment will then climb to 4,636 students in 2025–2026 before leveling off (see Table 28). It is my belief that this upper-limit parameter is unlikely to be reached, at least in the longer term.

Table 18

Concluding Remarks

As I noted in my previous reports, no demographer has a crystal ball. In this updated report, I have assembled the best information presently available and applied professional techniques and judgment to generate the enrollment projections for the Hinsdale Central High School campus and the Hinsdale South High School campus. These projections should be monitored and updated regularly to insure that policy decisions are based on the most current and consistently reliable figures. At this time, it is my hope that the projections and other demographic information contained in this report will be helpful to the Hinsdale Township High School District 86 Board of Education, administrators, teachers, and concerned citizens as plans are made for future space and staff needs at your two high schools.

John D. Kasarda, Ph.D.
Chapel Hill, North Carolina
August 2015
