

Dear 2022-2023 AP Calculus students at ASF,

First of all, congratulations on choosing to embark on this journey through **AP Calculus**! It will be fun, challenging, eye-opening, and rewarding. After this course you will know a lot about Differential Calculus and Integral Calculus, and you will be prepared for university-level mathematics.

I'd like for you to find some time this summer to reinforce your "fluency" in the language of algebra, the basis for the language that we'll be speaking in this AP Calculus class.

In order to prepare, and to be confident as you come to AP Calculus in the fall, I'm offering you this summer preparation for AP Calculus, through the website DeltaMath.

Here what I'd like you to work on before August 8th:

1. Join our class on Delta Math - <https://www.deltamath.com/students?code=ZQ46-B2NE>
2. There will be a practice set waiting for you called "AP Calculus Summer Practice"
3. Complete as much as you can, so that you show up feeling confident on August 8th
4. If you have any problems, you can email me during the summer at rachelson@asf.edu.mx
5. This is not graded, but highly recommended

Remember, this AP course is an incredibly interesting math course, but a challenging one, so coming in prepared will give you a huge boost. Take advantage of this opportunity!

I'm really excited to meet you in the fall and to work with you in AP Calculus. All the best!

Mr. Gadiel Rachelson
AP Calculus Teacher
ASF
