

Dear 2022-2023 AP Statistics students at ASF,

First of all, congratulations on choosing to embark on this journey through **AP Statistics!** It will be fun, challenging, eye-opening, and rewarding. In this course you will learn a lot about Data Analysis and Displays, Experimental Design, Probability, Data Distributions, and Inference from Data Samples. After the course and the exam, you should be well prepared for university-level statistics.

We'd like for you to find some time this summer to reinforce your "fluency" in the basics of data analysis and probability.

In order to prepare, and to be confident as you come to AP Statistics in the fall, we're offering you this summer preparation for the class, through the website DeltaMath.

Here what we'd like you to work on before August 8th:

1. Join our class on Delta Math - <https://www.deltamath.com/students?code=2Y44-BP4U>
2. There will be a practice set waiting for you called "AP Statistics Summer Prep"
3. Complete as much as you can, so that you show up feeling confident on August 8th
4. If you have any problems, you can email us during the summer at rachelson@asf.edu.mx or caldwells@asf.edu.mx
5. This is not graded, but highly recommended

Remember, this AP course is an incredibly interesting math course, but a challenging one, so coming in prepared will give you a huge boost. Take advantage of this opportunity!

We're really excited to meet you in the fall and to work with you in AP Statistics. All the best!

Mr. Gadiel Rachelson & Mr. Stephen Caldwell
