Market Recap

Bond yields beyond a year retreated in May as investors factored in the possibility that slower growth might eventually allow Fed officials to tighten policy at a less aggressive pace later in the year ...but the near-term outlook remains extremely cloudy. The April employment report showed +428k jobs were added to company payrolls during the month with the unemployment rate unchanged at 3.6%. The number of Americans actively seeking work held steady at 5.9 million. In April, almost half the number of reported jobs openings in March. The mismatch of job seekers to jobs available is virtually unprecedented and gives the Fed a huge amount of leeway to slow economic growth without sidelining millions of workers.

However, the main story continues to be the Fed's other mandate - *inflation*. The April CPI report came in hotter-than-expected with the monthly core rate doubling from +0.3% to +0.6%. Headline CPI climbed by a more restrained +0.3% but would have been higher if gasoline prices had not dipped during the survey period. On a year-over-year basis, overall CPI slipped from a four-decade high of +8.5% to +8.3%, although much of this decrease can be attributed to the higher base effect relative to the prior year.

AAA reported the average nationwide price of unleaded gasoline jumped another \$0.50 in May to a new record high of \$4.66 per gallon, promising continued inflationary pressure, and yet another weight on the back of U.S. consumers. Diesel prices were nearly a dollar higher during the month, which means transportation costs will certainly climb, pushing prices higher on a broad range of consumer products.

Mortgage rates stabilized in May with the 30-year fixed rate average ending the month at 5.10%, matching the average at the end of April, but with the average home price up more than 35% over the past two years, affordability is fast approaching a record low. This is one more weight on the consumer, particularly first-time buyers.

If overall consumer spending is on the verge of slowing it wasn't apparent in the April retail sales report. Sales rose by a brisk +0.9% in April, while March sales were revised sharply upward from +0.5% to +1.4%. The April headline increase would have been even bigger if

gasoline prices had not fallen -2.7% during the month, dragging gas station receipts lower. As mentioned previously, we know that gas prices have since reversed course and are now much higher.

Although inflation may be nearing a peak, several underlying components are generally expected to move higher in the coming months. Summer has historically been peak season for travel and home buying, but this year, arguably the first since 2019 that Americans feel comfortable getting out, also suggests an explosion in eating and drinking away from home, as well as a significant jump in attendance at concerts and sporting events. Given how challenging it's been for employers to find and retain workers, the service sector will be forced to increase pay and pass higher prices on to consumers.

The FOMC met in early May with inflation on center stage. Fed officials, as expected, announced the first 50 basis point rate hike in 22 years. The Fed also took the opportunity to reiterate that they expected to hike in 50 bp increments at the next two FOMC meetings but pushed back on the notion of bigger 75 bp moves. The meeting also clarified that balance sheet reduction would begin on June 1st at a maximum of \$47.5 billion before stepping up to \$95 billion in September. The simple fact that these securities will be allowed to mature without being reinvested also tightens monetary policy.

The committee made it clear that their priority will be to get inflation under control, sacrificing economic growth in the process. Investors aren't as sure that Powell will be able to stay the course once it becomes apparent that recession has arrived. For the time being, the Fed will deliver as promised, tightening by a half point in June and July before reassessing at the September meeting. The two wild cards in play remain the war in Ukraine and the COVID-related shutdown of factory production in China. At the time of this writing, there are already signs that China has reopened schools and public transportation in Shanghai and other major cities.

Investment Officers' Certification

This report is prepared for the Northwest ISD (the "Entity") in accordance with Chapter 2256 of the Texas Public Funds Investment Act ("PFIA"). Section 2256.023(a) of the PFIA states that: "Not less than quarterly, the investment officer shall prepare and submit to the governing body of the entity a written report of the investment transactions for all funds covered by this chapter for the preceding reporting period." This report is signed by the Entity's investment officers and includes the disclosures required in the the PFIA.

The investment portfolio complied with the PFIA and the Entity's approved Investment Policy and Strategy throughout the period. All investment transactions made in the portfolio during this period were made on behalf of the Entity and were made in full compliance with the PFIA and the approved Investment Policy.

It is not possible to directly invest in an index. Financial forecasts, rates of return, risk, inflation, and other assumptions may be used as the basis for illustrations. They should not be considered a guarantee of future performance or a guarantee of achieving overall financial objectives. Past performance is not a guarantee or a predictor of future results of either the indices or any particular investment. S&P rates the creditworthiness of individual bonds from: AAA highest to D lowest.

Investing in fixed income securities involves interest rate risk, credit risk, and inflation risk. Interest rate risk is the possibility that bond prices will decrease because of an interest rate increase. When interest rates rise, bond prices and the values of fixed income securities fall. When interest rates fall, bond prices and the values of fixed income securities rise. Credit risk is the risk that a company will not be able to pay its debts, including the interest on its bonds. Inflation risk is the possibility that the interest paid on an investment in bonds will be lower than the inflation rate, decreasing purchasing power.

Cash alternatives typically include money market securities and U.S. treasury bills. Investing in such cash alternatives involves inflation risk. In addition, investments in money market securities may involve credit risk and a risk of principal loss. Because money market securities are neither insured nor guaranteed by the Federal Deposit Insurance Corporation or any other government agency, there is no guarantee the value of your investment will be maintained at \$1.00 per share, and your shares, when sold, may be worth more or less than what you originally paid for them. U.S. Treasury bills are subject to market risk if sold prior to maturity. Market risk is the possibility that the value, when sold, might be less than the purchase price.

Investing in stock securities involves volatility risk, market risk, business risk, and industry risk. The prices of most stocks fluctuate. Volatility risk is the chance that the value of a stock will fall. Market risk is the chance that the prices of all stocks will fall due to conditions in the economic environment. Business risk is the chance that a specific company's stock will fall because of issues affecting it. Industry risk is the chance that a set of factors particular to an industry group will adversely affect stock prices within the industry.
