Building Successful Futures • Each Student • Every Day

High School Accelerated Algebra II Curriculum

Course Description: This course includes the study of a variety of functions (linear, quadratic higher-order polynomials, exponential, absolute value, logarithmic and rational) learning to graph, compare, perform operations and manipulate them in order to solve, analyze and apply to problems. Students will use probability and statistics to evaluate outcomes of decisions. Students develop rigorous problem-solving skills, logical reasoning and mathematical communication skills required for success in higher math courses and real life experiences. The Accelerated Algebra II classes are expected to explore and understand topics with more depth.

Scope and Sequence:

Time Frame (blocks)	Unit
1 (+5 ½ if needed for review)	Unit 1: Basics of Algebra II
7	Unit 2: Transformations of Functions
7 (+1 if needed for review)	Unit 3: Quadratic Equations and Complex Numbers
8	Unit 4: Systems and Inequalities
11	Unit 5: Polynomial Functions
7 (+1 if needed for review)	Unit 6: Rational Exponents and Radical Functions
6	Unit 7: General Functions
9	Unit 8: Exponential and Logarithmic Functions
9	Unit 9: Rational Functions
Remainder of semester (12 suggested)	Unit 10: Probability, Data Analysis & Statistics

Curriculum Revision Tracking

Spring, 2022

- Adopted DESE Priority Standards
 - Included Learning Targets and Success Criteria
 - Updated units from:
 - Unit 1: Linear Equations, Inequalities, and Quadratics
 - Unit 2: Polynomials
 - Unit 3: Rational Exponents and Radicals
 - Unit 4: Functions
 - Unit 5: Logs
 - Unit 6: Statistics and Probability
- to
- Unit 1: Basics of Algebra II
 - Unit 2: Transformations of Functions
 - Unit 3: Quadratic Equations and Complex Numbers
 - Unit 4: Systems and Inequalities
 - Unit 5: Systems and Inequalities
 - Unit 6: Rational Exponents and Radical Functions
 - Unit 7: General Functions
 - Unit 8: Exponential and Logarithmic Functions
 - Unit 9: Rational Functions
 - Unit 10: Probability, Data Analysis & Statistics
- Updated scope, sequence and pacing to match newly updated units

Unit 1: Basics of Algebra II

Subject: Accelerated Algebra II

Grade: 9-12

Name of Unit: Basics of Algebra II

Length of Unit: 1 (+5 ½ if needed for review)

Overview of Unit: Students will take a pretest over Algebra I concepts to determine which sections are necessary for review. The concepts in the unit cover the concepts of Algebra I that are crucial for Algebra II and commonly needed for review

Priority Standards for unit:

- A1.CED.A.1 Create equations and inequalities in one variable and use them to model and/or solve problems.
- A1.REI.C.6 Explain that the graph of an equation in two variables is the set of all its solutions plotted in the Cartesian coordinate plane.
- A1.IF.B.3 Using tables, graphs and verbal descriptions, interpret key characteristics of a function that models the relationship between two quantities.
- A1.IF.C.7 Graph functions expressed symbolically and identify and interpret key features of the graph.
- A1.SSE.A.1 Interpret the contextual meaning of individual terms or factors from a given problem that utilizes formulas or expressions.
- A2.IF.A.1 Identify and interpret key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.

Supporting Standards for unit:

- A1.NQ.B.3 "Use units of measure as a way to understand and solve problems involving quantities."
 - a)Identify, label and use appropriate units of measure within a problem.
 - b)Convert units and rates.
 - c)Use units within problems.
 - d)Choose and interpret the scale and the origin in graphs and data displays."
- A1.REI.A.1 Explain how each step taken when solving an equation or inequality in one variable creates an equivalent equation or inequality that has the same solution(s) as the original.
- A1.CED.A.4 Solve literal equations and formulas for a specified variable that highlights a quantity of interest.
- A1.IF.B.4 Relate the domain and range of a function to its graph and, where applicable, to the quantitative relationship it describes.
- A1.IF.B.6 Interpret the parameters of a linear or exponential function in terms of the context.

- A1.LQE.A.1 "Distinguish between situations that can be modeled with linear or exponential functions.
 - a) Determine that linear functions change by equal differences over equal intervals.
 - b) Recognize exponential situations in which a quantity grows or decays by a constant percent rate per unit interval."
- A1.IF.A.1 "Understand that a function from one set (domain) to another set (range) assigns to each element of the domain exactly one element of the range.
 - a) Represent a function using function notation.
 - b) Understand that the graph of a function labeled f is the set of all ordered pairs (x, y) that satisfy the equation $y=f(x)$."
- A1.IF.A.2 Use function notation to evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context.

Priority Standard	Unwrapped Concepts (Students need to know)	Unwrapped Skills (Students need to be able to do)	Bloom's Taxonomy Levels	Webb's DOK
A1.CED.A.1	equations and inequalities in one variable	Create	Create	4

A2.IF.A.1	key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.	Interpret	Understand	2

Essential Questions:

1. How is thinking algebraically different from thinking arithmetically?
2. How do I use algebraic expressions to analyze or solve problems?
3. How do the properties contribute to algebraic understanding?

Enduring Understanding/Big Ideas:

1. Real world situations can be represented symbolically and graphically.
2. Algebraic expressions and equations generalize relationships from specific cases.

Unit Vocabulary:

Big Ideas Chapter

Standard	Topic & Section	Suggested # of Days	Learning Target	Success Criteria
Pre-test		1	<i>After the pre-test, teacher will determine which of the sections in this unit are necessary for review. Pacing is suggested for whichever topics are necessary.</i>	
A1.NQ.B.3, A1.REI.A.1, A1.CED.A.1 , A1.CED.A.4	Solving Linear & Literal Equations <i>Alg I Sections:</i> · 1.5 Solving Equations with Variables on Both Sides · 1.7 Rewriting Equations and Formulas	(1)	Write and solve equations with variables on both sides. Solve literal equations for given variables.	• I can apply properties of equality using variable terms. • I can solve equations with variables on both sides. • I can recognize when an equation has zero, one, or infinitely many solutions. • I can identify a literal equation. • I can use properties of equality to rewrite literal equations. • I can use rewritten formulas to solve problems.
A1.NQ.B.3, A1.CED.A.1 , A1.REI.A.1	Writing Linear Equations <i>Alg I Sections:</i> · 1.1 Solving Simple Equations · 1.2 Solving Multi- Step Equations	(1)	Write one-step linear equations. Write multi-step linear equations.	• I can apply properties of equality to produce equivalent equations. • I can apply more than one property of equality to produce equivalent equations.
A1.NQ.B.3, A1.REI.C.6 , A1.IF.B.3 , A1.IF.B.4, A1.IF.B.6, A1.IF.C.7 , A1.SSE.A.1 ,	Graphing Linear Equations <i>Alg I Sections:</i> · 3.5 Graphing Linear Equations in Standard Form	(1)	Graph and interpret linear equations written in standard form. Find the slope of a line and use slope-	• I can graph equations of horizontal and vertical lines. • I can graph linear equations written in standard form using intercepts.

A1.LQE.A.1	· 3.6 <i>Graphing Linear Equations in Slope-Intercept Form</i>		intercept form.	● I can find the slope of a line. ● I can use the slope-intercept form of a linear equation.
A1.CED.A.1, A1.REI.A.1	Absolute Value equations <i>Alg I Sections:</i> · 1.6 <i>Solving Absolute Value Equations</i>	(1/2)	Write and solve equations involving absolute value.	● I can write the two linear equations related to a given absolute value equation. ● I can solve equations involving one or two absolute values. ● I can identify special solutions of absolute value equations.
A1.NQ.B.3	Linear & Absolute Value Inequalities <i>Alg I Sections:</i> · 2.4 <i>Solving Multi-Step Inequalities</i> · 2.6 <i>Solving Absolute Value Inequalities</i>	(1/2)	Write and solve multi-step inequalities. Write and solve inequalities involving absolute value.	● I can use more than one property of inequality to generate equivalent inequalities. ● I can solve multi-step inequalities using inverse operations. ● I can write a compound inequality related to a given absolute value inequality. ● I can solve absolute value inequalities.
A1.IF.A.1, A1.IF.B.3 , A1.IF.B.4, A1.NQ.B.3, A1.IF.A.1, A1.IF.A.2	Function Notation <i>Alg I Sections:</i> · 3.1 <i>Functions</i> · 3.4 <i>Function Notation</i>	(1/2)	Understand the concept of a function. Understand and use function notation.	● I can determine whether a relation is a function. ● I can find the domain and range of a function. ● I can distinguish between independent and dependent variables. ● I can evaluate functions using function notation. ● I can interpret statements that use function notation. ● I can graph functions represented using function notation.

Engaging Scenarios

Engaging Scenarios: There are several options for engaging scenarios for this unit. They may be appropriate as a means for introducing concepts in the unit, as a unit-long project for attaching learning to, or as a culminating experience at the end of the unit.

- Performance Task found in the Big Ideas Assessment Book (accessible in the physical Assessment Book, or the digital version in the Assess area of the Featured Chapter Resources after selecting the appropriate Chapter).
- Performance Task found at the end of the chapter in Big Ideas.
- Performance Task found in the Teach area of the Featured Chapter Resources after selecting the appropriate Chapter.
- AlgII 1.3 Modeling with Linear Functions

Unit 2: Transformations of Functions

Subject: Accelerated Algebra II

Grade: 9-12

Name of Unit: Unit 2: Transformations of Functions

Length of Unit: 7 blocks (5 for learning, 2 for review and assessment)

Overview of Unit: Students will work on transformations of function. The goal is to identify the effect on the graph of replacing $f(x)$ by $f(x) + k$, $kf(x)$, $f(kx)$, and $f(x + k)$ for specific values of k . Students will also learn characteristics of quadratic functions and writing equations of parabolas.

Priority Standards for unit:

- A2.IF.A.1 Identify and interpret key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.
- A2.BF.A.3 Describe the effects of transformations algebraically and graphically, creating vertical and horizontal translations, vertical and horizontal reflections and dilations (expansions/compressions) for linear, quadratic, cubic, square and cube root, absolute value, exponential and logarithmic functions.
- A2.FM.A.1 Create functions and use them to solve applications of quadratic and exponential function modeling problems.

Supporting Standards for unit:

- A2.APR.A.5 Identify zeros of polynomials when suitable factorizations are available, and use the zeros to sketch the function defined by the polynomial.

Priority Standard	Unwrapped Concepts (Students need to know)	Unwrapped Skills (Students need to be able to do)	Bloom's Taxonomy Levels	Webb's DOK
A2.IF.A.1	key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.	Identify	Understand	1
A2.IF.A.1	key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.	Interpret	Apply	2

A2.BF.A.3	the effects of transformations algebraically and graphically, creating vertical and horizontal translations, vertical and horizontal reflections and dilations (expansions/compressions) for linear, quadratic, cubic, square and cube root, absolute value, exponential and logarithmic functions.	Describe	Apply	2
A2.FM.A.1	functions and use them to solve applications of quadratic and exponential function modeling problems.	Create	Create	4

Essential Questions:

1. How can you transform the graphs of linear, absolute value, quadratic, polynomial, exponential, logarithmic, and trigonometric functions?
2. What are the characteristics of linear, absolute value, quadratic, polynomial, exponential, logarithmic, and trigonometric functions?
3. How can you show a function is even, odd or neither algebraically?
4. What are the characteristics of the graphs of an even or odd function?

Enduring Understanding/Big Ideas:

1. A variety of families of functions can be used to model and solve real world situations
2. The characteristics of linear inequalities and their representations are useful in solving real-world problems.
3. Identify even or odd functions.
4. Understand that the parent function of the graph can be transformed to fit a function.

Unit Vocabulary:

Academic Cross-Curricular Words	Content/Domain Specific
	quadratic function parabola vertex of a parabola vertex form of a quadratic function axis of symmetry standard form of a quadratic function minimum value maximum value intercept form of a quadratic function

Big Ideas Chapters 1, 2, and 4

Suggested				
Standard	Topic & Section	# of Days	Learning Target	Success Criteria
A2.IF.A.1, A2.BF.A.3	1.1 Parent Functions and Transformations	1	Graph and describe transformations of functions.	● I can identify the function family to which a function belongs. ● I can graph transformations of functions. ● I can explain how translations, reflections, stretches, and shrinks affect graphs of functions.
A2.IF.A.1, A2.BF.A.3	1.2 Transformations of Linear and Absolute Value Functions		Write functions that represent transformations of functions.	● I can write functions that represent transformations of linear functions. ● I can write functions that represent transformations of absolute value functions.
A2.APR.A.5, A2.BF.A.3	4.7 Transformations of Polynomial Functions		Describe and graph transformations of polynomial functions.	● I can describe transformations of polynomial functions. ● I can graph transformations of polynomial functions. ● I can write functions that represent transformations of polynomial functions.
A2.IF.A.1, A2.BF.A.3	2.1 Transformations of Quadratic Functions	1	Describe and graph transformations of quadratic functions.	● I can describe transformations of quadratic functions. ● I can graph transformations of quadratic functions. ● I can write functions that represent transformations of quadratic functions.
A2.IF.A.1	2.2 Characteristics of Quadratic Functions	2	Graph and describe quadratic functions.	● I can use properties of parabolas to graph quadratic functions. ● I can identify characteristics of quadratic functions and their graphs. ● I can use characteristics of quadratic functions to solve real-life problems.

A2.IF.A.1, A2.FM.A.1	2.4 Modeling with Quadratic Functions	1	Write equations of quadratic functions using given characteristics.	• I can write equations of quadratic functions using vertices, points, and x-intercepts. • I can write quadratic equations to model data sets. • I can use technology to find a quadratic model for a set of data.
-------------------------	---------------------------------------	---	---	--

Engaging Scenarios

Engaging Scenarios: There are several options for engaging scenarios for this unit. They may be appropriate as a means for introducing concepts in the unit, as a unit-long project for attaching learning to, or as a culminating experience at the end of the unit.

- Performance Task found in the Big Ideas Assessment Book (accessible in the physical Assessment Book, or the digital version in the Assess area of the Featured Chapter Resources after selecting the appropriate Chapter).
- Performance Task found at the end of the chapter in Big Ideas.
- Performance Task found in the Teach area of the Featured Chapter Resources after selecting the appropriate Chapter.

Unit 3: Quadratic Equations and Complex Numbers

Subject: Accelerated Algebra II

Grade: 9-12

Name of Unit: Quadratic Equations and Complex Numbers

Length of Unit: 7 (5 for learning, 2 for review and assessment, *+1 for review of factoring if necessary*)

Overview of Unit: Students will solve quadratic equations and inequalities, which may include imaginary solutions. Complex numbers are introduced after students review several methods they used in Algebra 1 to solve quadratic equations with real solutions.

Priority Standards for unit:

- A1.SSE.A.2 Analyze the structure of polynomials to create equivalent expressions or equations.
- A2.REI.A.1 Create and solve equations and inequalities, including those that involve absolute value.
- A2.NQ.B.7 Know and apply the Fundamental Theorem of Algebra.
- A2.IF.A.1 Identify and interpret key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.

Supporting Standards for unit:

- A1.NQ.B.3 Use units of measure as a way to understand and solve problems involving quantities.
 - a) Identify, label and use appropriate units of measure within a problem.
 - b) Convert units and rates.
 - c) Use units within problems.
 - d) Choose and interpret the scale and the origin in graphs and data displays.
- A1.SSE.A.3 Choose and produce equivalent forms of a quadratic expression or equations to reveal and explain properties.
 - a) Find the zeros of a quadratic function by rewriting it in factored form.
 - b) Find the maximum or minimum value of a quadratic function by completing the square.
- A2.NQ.B.5 Represent complex numbers.
- A2.NQ.B.6 Add, subtract, multiply and divide complex numbers.

Priority Standard	Unwrapped Concepts (Students need to know)	Unwrapped Skills (Students need to be able to do)	Bloom's Taxonomy Levels	Webb's DOK
A1.SSE.A.2	the structure of polynomials to create equivalent express	Analyze	Analyze	4
A2.REI.A.1	equations and inequalities, including those that involve absolute value.	Create	Create	4
A2.REI.A.1	equations and inequalities, including those that involve absolute value.	Solve	Apply	2
A2.NQ.B.7	Know and apply the Fundamental Theorem of Algebra.	Know	Understand	1
A2.NQ.B.7	Know and apply the Fundamental Theorem of Algebra.	Apply	Apply	2
A2.IF.A.1	key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.	Identify	Remember	1
A2.IF.A.1	key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.	Interpret	Understand	2

Essential Questions:

1. How does understanding how to find the vertex of a quadratic function help in making decisions in real-life applications?
2. What are the advantages of a quadratic function in vertex form? In standard form?
3. How is any quadratic function related to the parent quadratic function $f(x)=x^2$?
4. How does solving for x in quadratic functions compare to solving for x in linear functions?
5. Why do we analyze quadratic functions?
6. How can quadratic functions maximize profits or minimize cost?
7. Why does the degree of an equation reveal the number of solutions to the equation?
8. To what extent are solutions to quadratic equations real?
9. How are the real solutions of a quadratic equation related to the graph of the related quadratic function?

Enduring Understanding/Big Ideas:

1. The vertex of a parabola will represent the maximum point of the function, which will help to understand maximum and minimum values in real-life situations.
2. No matter how you choose to solve a quadratic function for real solutions, you are always looking for where the function crosses the x-axis. These points on the graph are significant in many real-world applications.
3. Solutions that exist can exist beyond the real number system. All quadratic functions are a transformation on the parent function $f(x)=x^2$.
4. The domain and range of quadratic functions can be relative to a situation.

Unit Vocabulary:

Academic Cross-Curricular Words	Content/Domain Specific
	quadratic equation in one variable zero of a function completing the square Quadratic Formula discriminant

Big Ideas Chapter 3

Standard	Topic & Section	Suggested # of Days	Learning Target	Success Criteria
A1.NQ.B.3, A1.SSE.A.2, A1.SSE.A.3	<i>Factoring Review</i> <i>(optional based on pre-test results)</i> <i>Alg I Sections:</i> · 7.6 Factoring $ax^2 + bx + c$ · 7.5 Factoring $x^2 + bx + c$	(1)	<i>Factor polynomials of the form $ax^2 + bx + c$ and $x^2 + bx + c$.</i>	- I can factor a polynomial using the GCF of the terms of the polynomial. - I can factor polynomials of the form $ax^2 + bx + c$ and $x^2 + bx + c$. - I can explain how to use a, b, and c to find binomial factors of a polynomial $ax^2 + bx + c$ and $x^2 + bx + c$. - I can identify the three terms of a trinomial.
A2.REI.A.1	3.1 Solving Quadratic Equations	1	Solve quadratic equations graphically and algebraically.	- I can solve quadratic equations by graphing. - I can solve quadratic equations algebraically. - I can use quadratic equations to solve real-life problems.
A2.NQ.B.5, A2.NQ.B.6, A2.NQ.B.7	3.2 Complex Numbers	1	Understand the imaginary unit i and perform operations with complex numbers.	- I can define the imaginary unit i and use it to rewrite the square root of a negative number. - I can add, subtract, and multiply complex numbers. - I can find complex solutions of quadratic equations and complex zeros of quadratic functions.
A2.REI.A.1	3.3 Completing the Square	1	Solve quadratic equations and rewrite quadratic functions by completing the square.	- I can solve quadratic equations using square roots. - I can solve quadratic equations by completing the square. - I can apply completing the square to write quadratic functions in vertex form.

A2.REI.A.1	3.4 Using the Quadratic Formula	1	Solve and analyze quadratic equations using the Quadratic Formula and discriminants.	• I can solve quadratic equations using the Quadratic Formula. • I can find and interpret the discriminant of an equation. • I can write quadratic equations with different numbers of solutions using the discriminant.
A2.IF.A.1	Real World, Application, and Word Problems	1	Solve quadratic equations graphically and algebraically.	• I can use quadratic equations to solve real-life problems.

Engaging Scenarios

Engaging Scenarios: There are several options for engaging scenarios for this unit. They may be appropriate as a means for introducing concepts in the unit, as a unit-long project for attaching learning to, or as a culminating experience at the end of the unit.

Unit 4: Systems and Inequalities

Subject: Accelerated Algebra II

Grade: 9-12

Name of Unit: Systems and Inequalities

Length of Unit: 8 blocks (6 for learning, 2 for review and assessment)

Overview of Unit: Students will refresh and extend their understanding of solving nonlinear systems of equations and inequalities.

Priority Standards for unit:

- A2.REI.B.3 Create and solve systems of equations that may include non-linear equations and inequalities.
- A2.REI.A.1 Create and solve equations and inequalities, including those that involve absolute value.
- A2.IF.A.1 Identify and interpret key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.

Priority Standard	Unwrapped Concepts (Students need to know)	Unwrapped Skills (Students need to be able to do)	Bloom's Taxonomy Levels	Webb's DOK
A2.REI.A.1	equations and inequalities, including those that involve absolute value.	Create	Create	4

Unit 5: Polynomial Functions

Subject: Accelerated Algebra II

Grade: 9-12

Name of Unit: Polynomial Functions

Length of Unit: 11 Blocks (9 for learning, 2 for review and assessment)

Overview of Unit: This unit extends students' knowledge of linear and quadratic functions to other polynomial functions. Students will graph polynomial functions and write and solve polynomial equations.

Priority Standards for unit:

- A2.IF.A.1 Identify and interpret key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.
- A2.BF.A.3 Describe the effects of transformations algebraically and graphically, creating vertical and horizontal translations, vertical and horizontal reflections and dilations (expansions/compressions) for linear, quadratic, cubic, square and cube root, absolute value, exponential and logarithmic functions.
- A2.REI.A.1 Create and solve equations and inequalities, including those that involve absolute value.
- A2.NQ.B.7 Know and apply the Fundamental Theorem of Algebra.

Supporting Standards for unit:

- A2.APR.A.1 Extend the knowledge of factoring to include factors with complex coefficients.
- A2.APR.A.5 Identify zeros of polynomials when suitable factorizations are available, and use the zeros to sketch the function defined by the polynomial.

Priority Standard	Unwrapped Concepts (Students need to know)	Unwrapped Skills (Students need to be able to do)	Bloom's Taxonomy Levels	Webb's DOK
A2.IF.A.1	key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.	Identify	Remember	1
A2.IF.A.1	key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.	Interpret	Understand	2

A2.BF.A.3	the effects of transformations algebraically and graphically, creating vertical and horizontal translations, vertical and horizontal reflections and dilations (expansions/compressions) for linear, quadratic, cubic, square and cube root, absolute value, exponential and logarithmic functions.	Describe	Apply	2

A2.REI.A.1	equations and inequalities, including those that involve absolute value.	Solve	Apply	2
A2.NQ.B.7	Know and apply the Fundamental Theorem of Algebra.	Know	Understand	1
A2.NQ.B.7	Know and apply the Fundamental Theorem of Algebra.	Apply	Apply	2

Essential Questions:

1. What does the degree of a polynomial tell you about its related polynomial functions?
2. For a polynomial function, why are factors, zeros, and x-intercepts related?
3. For a polynomial equation, why are factors and roots related?

Enduring Understanding/Big Ideas:

1. The degree of the polynomial will determine the shape of its graph, the maximum number of turning points, its end behavior, and the number of roots (including multiple and complex roots) so that real world data can be analyzed in terms of its maximum, minimum, and break-even values.
2. Knowing the zeros of a polynomial function will help you factor the polynomial, graph the function, and solve the related polynomial equation.
3. Polynomials can be divided using steps similar to the long division steps used to divide whole numbers.
4. You can add, subtract, multiply, and divide functions based on how you perform these operations for real numbers. One difference is that you must consider the domain of each function.

Unit Vocabulary:

Academic Cross-Curricular Words	Content/Domain Specific
	monomial degree of a monomial polynomial degree of a polynomial polynomial function standard form of a polynomial function turning point greatest common factor imaginary number end behavior factor theorem multiple zero multiplicity relative maximum relative minimum sum of cubes difference of cubes synthetic division Remainder theorem Rational roots theorem Fundamental theorem of Algebra expand Pascal's triangle Binomial theorem Composite functions

Big Ideas Chapter

Standard	Topic & Section	Suggested # of Days	Learning Target	Success Criteria
A2.APR.A.5 , A2.IF.A.1	4.1 Graphing Polynomial Functions	1	Graph and describe polynomial functions.	- I can identify and evaluate polynomial functions. - I can graph polynomial functions. - I can describe end behavior of polynomial functions.
	4.2 Adding, Subtracting, and Multiplying Polynomials	1	Add, subtract, and multiply polynomials.	- I can add and subtract polynomials. - I can multiply polynomials and use special product patterns.
	4.3 Dividing Polynomials	2	Divide polynomials by other polynomials and use the Remainder Theorem.	- I can use long division to divide polynomials by other polynomials. - I can divide polynomials by binomials of the form $x - k$ using synthetic division. - I can explain the Remainder Theorem.
A2.APR.A.1	4.4 Factoring Polynomials	1	Factor polynomials and use the Factor Theorem.	- I can find common monomial factors of polynomials. - I can factor polynomials. - I can use the Factor Theorem.
A2.REI.A.1, A2.APR.A.5	4.5 Solving Polynomial Equations	2	Solve polynomial equations and find zeros of polynomial functions.	- I can explain how solutions of equations and zeros of functions are related. - I can solve polynomial equations. - I can write a polynomial function when given information about its zeros.

A2.NQ.B.7, A2.APR.A.5	4.6 The Fundamental Theorem of Algebra	1	Use the Fundamental Theorem of Algebra to find all complex roots of polynomial equations.	• I can identify the degree of a polynomial. • I can explain the Fundamental Theorem of Algebra. • I can find all the zeros of a polynomial function.
A2.APR.A.5, A2.IF.A.1, A2.BF.A.3	4.8 Analyzing Graphs of Polynomial Functions	1	Analyze graphs of polynomial functions.	• I can identify a turning point of a polynomial function. • I can analyze real zeros and turning points numerically. • I can explain the relationship among the degree of a polynomial function, real zeros, and turning points.

Engaging Scenarios

Engaging Scenarios: There are several options for engaging scenarios for this unit. They may be appropriate as a means for introducing concepts in the unit, as a unit-long project for attaching learning to, or as a culminating experience at the end of the unit.

- Performance Task found in the Big Ideas Assessment Book (accessible in the physical Assessment Book, or the digital version in the Assess area of the Featured Chapter Resources after selecting the appropriate Chapter).
- Performance Task found at the end of the chapter in Big Ideas.
- Performance Task found in the Teach area of the Featured Chapter Resources after selecting the appropriate Chapter.

Unit 6: Rational Exponents and Radical Functions

Subject: Accelerated Algebra II

Grade: 9-12

Name of Unit: Rational Exponents and Radical Functions

Length of Unit: 7 blocks (5 for learning, 2 for review and assessment, *+1 for review of properties of exponents if needed*)

Overview of Unit: Students will understand rational exponents and radical functions. Students will extend their understanding of functions and equations to graph radical functions, solve radical equations, perform function operations, compose functions, and find inverses of functions.

Priority Standards for unit:

- A2.IF.A.1 Identify and interpret key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.
- A2.BF.A.3 Describe the effects of transformations algebraically and graphically, creating vertical and horizontal translations, vertical and horizontal reflections and dilations (expansions/compressions) for linear, quadratic, cubic, square and cube root, absolute value, exponential and logarithmic functions.
- A2.REI.A.1 Create and solve equations and inequalities, including those that involve absolute value.
- A1.SSE.A.1 Interpret the contextual meaning of individual terms or factors from a given problem that utilizes formulas or expressions.

Supporting Standards for unit:

- A2.NQ.A.1 Extend the system of powers and roots to include rational exponents.
- A2.NQ.A.2 Create and recognize equivalent expressions involving radical and exponential forms of expressions.
- A2.NQ.A.3 Add, subtract, multiply and divide radical expressions.
- A2.NQ.A.4 Solve equations involving rational exponents and/or radicals and identify situations where extraneous solutions may result.
- A1.NQ.A.1 Explain how the meaning of rational exponents extends from the properties of integer exponents.
- A1.NQ.A.2 Rewrite expressions involving radicals and rational exponents using the properties of exponents. Limit to rational exponents with a numerator of 1.

- A1.NQ.B.3 Use units of measure as a way to understand and solve problems involving quantities.
 - a)Identify, label and use appropriate units of measure within a problem.
 - b)Convert units and rates.
 - c)Use units within problems.
 - d)Choose and interpret the scale and the origin in graphs and data displays.

Priority Standard	Unwrapped Concepts (Students need to know)	Unwrapped Skills (Students need to be able to do)	Bloom's Taxonomy Levels	Webb's DOK
A2.IF.A.1	key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.	Identify	Remember	1
A2.IF.A.1	key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.	Interpret	Understand	2
A2.BF.A.3	the effects of transformations algebraically and graphically, creating vertical and horizontal translations, vertical and horizontal reflections and dilations (expansions/compressions) for linear, quadratic, cubic, square and cube root, absolute value, exponential and logarithmic functions.	Describe	Apply	2
A2.REI.A.1	equations and inequalities, including those that involve absolute value.	Create	Create	4
A2.REI.A.1	equations and inequalities, including those that involve absolute value.	Solve	Apply	2
A1.SSE.A.1	the contextual meaning of individual terms or factors from a given problem that utilizes formulas or expressions	Interpret	Understand	2

Essential Questions:

1. To simplify the n th root of an expression, what must be true about the expression?
2. When you square each side of an equation, is the resulting equation equivalent to the original?

Enduring Understanding/Big Ideas:

1. Corresponding to every power there is a root.
2. You can combine like radicals using properties of real numbers.
3. You can write a radical expression in an equivalent form using a fractional (rational) exponent instead of a radical sign.
4. Solving a square root equation may require that you square each side of the equation. This can introduce extraneous solutions.

Unit Vocabulary:

Academic Cross-Curricular Words	Content/Domain Specific
	n th root principal root radical equation radicand rational exponent rationalize the denominator square root equation square root function extraneous solutions

Big Ideas Chapter 5

Standard	Topic & Section	Suggested # of Days	Learning Target	Success Criteria
A2.NQ.A.1, A2.NQ.A.2	5.1 n th Roots and Rational Exponents	1	Evaluate expressions and solve equations containing n th roots and rational exponents.	- I can explain the meaning of a rational exponent. - I can evaluate expressions with rational exponents. - I can solve equations using nth roots.
A1.NQ.A.1, A1.NQ.A.2, A1.NQ.B.3, A1.SSE.A.1	<i>Exponents Review (optional based on pre-test results)</i> <i>Alg I Sections:</i> · 6.1 Properties of Exponents	(1) <i>Review if needed</i>	<i>Write equivalent expressions involving powers.</i>	<i>I can explain the meaning of zero and negative exponents.</i> <i>I can evaluate and simplify expressions involving zero and negative exponents.</i> <i>I can simplify expressions using properties of exponents.</i>
A2.NQ.A.2, A2.NQ.A.3	5.2 Properties of Rational Exponents and Radicals	2	Simplify radical expressions.	- I can simplify radical expressions with rational exponents. - I can explain when radical expressions are in simplest form. - I can simplify variable expressions containing rational exponents and radicals.
A2.IF.A.1, A2.BF.A.3	5.3 Graphing Radical Functions	1	Describe and graph transformations of square roots and cube root functions.	- I can graph square roots and cube root functions. - I can describe transformations of square roots and cube root functions. - I can write functions that represent transformations of square roots and cube root functions.

A2.NQ.A.2, A2.NQ.A.4, A2.REI.A.1	5.4 Solving Radical Equations and Inequalities	1	Solve equations and inequalities containing radicals and rational exponents.	• I can identify radical equations and inequalities. • I can solve radical equations and inequalities. • I can identify extraneous solutions of radical equations. • I can solve real-life problems involving radical equations.
---	--	---	--	---

Engaging Scenarios

Engaging Scenarios: There are several options for engaging scenarios for this unit. They may be appropriate as a means for introducing concepts in the unit, as a unit-long project for attaching learning to, or as a culminating experience at the end of the unit.

- Performance Task found in the Big Ideas Assessment Book (accessible in the physical Assessment Book, or the digital version in the Assess area of the Featured Chapter Resources after selecting the appropriate Chapter).
- Performance Task found at the end of the chapter in Big Ideas.
- Performance Task found in the Teach area of the Featured Chapter Resources after selecting the appropriate Chapter.

Unit 7: General Functions

Subject: Accelerated Algebra II

Grade: 9-12

Name of Unit: General Functions

Length of Unit: 6 Blocks (4 for learning, 2 for review and assessment)

Overview of Unit: Students will perform function operations, compose functions, and find inverses of functions. Students will also understand piecewise and step functions.

Priority Standards for unit:

- A2.BF.A.1 Create new functions by applying the four arithmetic operations and composition of functions (modifying the domain and range as necessary).
- A1.IF.B.3 Using tables, graphs and verbal descriptions, interpret key characteristics of a function that models the relationship between two quantities.
- A1.IF.C.7 Graph functions expressed symbolically and identify and interpret key features of the graph.

Supporting Standards for unit:

- A2.IF.A.2 Translate between equivalent forms of functions.
- A2.BF.A.2 Derive inverses of functions, and compose the inverse with the original function to show that the functions are inverses.
- A1.IF.B.4 Relate the domain and range of a function to its graph and, where applicable, to the quantitative relationship it describes.

Priority Standard	Unwrapped Concepts (Students need to know)	Unwrapped Skills (Students need to be able to do)	Bloom's Taxonomy Levels	Webb's DOK
A2.BF.A.1	new functions by applying the four arithmetic operations and composition of functions (modifying the domain and range as necessary).	Create	Create	4
A1.IF.B.3	key characteristics of a function that models the relationship between two quantities.	Interpret	Understand	3

A1.IF.C.7	key features of the graph.	Identify	Remember	1
A1.IF.C.7	key features of the graph.	Interpret	Understand	2

Essential Questions:

1. How are a function and its inverse function related?

Enduring Understanding/Big Ideas:

1. The inverse of a function may or may not be a function.
2. A square root function is the inverse of a quadratic function that has a restricted domain.

Unit Vocabulary:

Academic Cross-Curricular Words	Content/Domain Specific
	Composition Inverse functions Piecewise functions Step functions

Big Ideas Chapter 5 & Algebra 1 Chapter 4

Standard	Topic & Section	Suggested # of Days	Learning Target	Success Criteria
A2.IF.A.2, A2.BF.A.1	5.5 Performing Function Operations	1	Perform arithmetic operations on two functions.	- I can explain what it means to perform an arithmetic operation on two functions. - I can find arithmetic combinations of two functions. - I can state the domain of an arithmetic combination of two functions. - I can evaluate an arithmetic combination of two functions for a given input.
A2.IF.A.2, A2.BF.A.1	5.6 Composition of Functions	1	Evaluate and find compositions of functions.	- I can evaluate a composition of functions. - I can find a composition of functions. - I can state the domain of a composition of functions.
A2.BF.A.2	5.7 Inverse of a Function	1	Understand the relationship between inverse functions.	- I can explain what inverse functions are. - I can find inverses of linear and nonlinear functions. - I can determine whether a pair of functions are inverses.
A1.IF.B.3, A1.IF.B.4, A1.IF.C.7	Piecewise & Step Functions Algebra 1 Section: 4.7 Piecewise Functions	1	Graph and write piecewise functions.	- I can evaluate piecewise functions. - I can graph piecewise functions. - I can write piecewise functions.

Engaging Scenarios

Engaging Scenarios: There are several options for engaging scenarios for this unit. They may be appropriate as a means for introducing concepts in the unit, as a unit-long project for attaching learning to, or as a culminating experience at the end of the unit.

- Performance Task found in the Big Ideas Assessment Book (accessible in the physical Assessment Book, or the digital version in the Assess area of the Featured Chapter Resources after selecting the appropriate Chapter).

- Performance Task found in the Teach area of the Featured Chapter Resources after selecting the appropriate Chapter.

Unit 8: Exponential and Logarithmic Functions

Subject: Accelerated Algebra II

Grade: 9-12

Name of Unit: Exponential and Logarithmic Functions

Length of Unit: 9 Blocks (7 for learning, 2 for review and assessment)

Overview of Unit: This unit extends students' knowledge of functions to exponential and logarithmic functions. Students will study the behavior, graphs, and real-life applications of exponential and logarithmic functions.

Priority Standards for unit:

- A2.IF.A.1 Identify and interpret key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.
- A2.BF.A.3 Describe the effects of transformations algebraically and graphically, creating vertical and horizontal translations, vertical and horizontal reflections and dilations (expansions/compressions) for linear, quadratic, cubic, square and cube root, absolute value, exponential and logarithmic functions.
- A2.REI.A.1 Create and solve equations and inequalities, including those that involve absolute value.
- A2.SSE.A.4 Understand why logarithmic scales are used, and use them to solve problems.
- A2.FM.A.1 Create functions and use them to solve applications of quadratic and exponential function modeling problems.

Supporting Standards for unit:

- A2.NQ.A.2 Create and recognize equivalent expressions involving radical and exponential forms of expressions.
- A2.IF.A.2 Translate between equivalent forms of functions.
- A2.SSE.A.1 Develop the definition of logarithms based on properties of exponents.
- A2.SSE.A.2 Use the inverse relationship between exponents and logarithms to solve exponential and logarithmic equations.
- A2.SSE.A.3 Use properties of logarithms to solve equations or find equivalent expressions.

Priority Standard	Unwrapped Concepts (Students need to know)	Unwrapped Skills (Students need to be able to do)	Bloom's Taxonomy Levels	Webb's DOK
A2.IF.A.1	key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.	Identify	Remember	1
A2.IF.A.1	key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.	Interpret	Understand	2
A2.BF.A.3	the effects of transformations algebraically and graphically, creating vertical and horizontal translations, vertical and horizontal reflections and dilations (expansions/compressions) for linear, quadratic, cubic, square and cube root, absolute value, exponential and logarithmic functions.	Describe	Apply	2
A2.REI.A.1	equations and inequalities, including those that involve absolute value.	Create	Create	4
A2.REI.A.1	equations and inequalities, including those that involve absolute value.	Solve	Apply	2
A2.SSE.A.4	why logarithmic scales are used, and use them to solve problems.	Understand	Understand	1
A2.FM.A.1	functions and use them to solve applications of quadratic and exponential function modeling problems.	Create	Create	4

Essential Questions:

1. How do you model a quantity that changes regularly over time by the same percentage?
2. How are exponents and logarithms related?
3. How are logarithmic and exponential functions related?

Enduring Understanding/Big Ideas:

1. Logarithms provide a way to work with inverses of exponential functions.
2. Exponential functions model “explosive growth”.
3. Logarithmic functions grow very slowly.
4. Decibels are logarithms that measure sound.
5. Exponents are used to solve logarithmic equations.
6. Logarithms are used to solve exponential equations.
7. Exponents and logarithms are inverse functions.

Unit Vocabulary:

Academic Cross-Curricular Words	Content/Domain Specific
	asymptote change of base formula common logarithm exponential equation exponential function exponential growth exponential decay logarithm logarithmic equation logarithmic function natural logarithmic function

Big Ideas Chapter 6

Standard	Topic & Section	Suggested # of Days	Learning Target	Success Criteria
A2.NQ.A.2, A2.IF.A.1 , A2.IF.A.2	6.1 Exponential Growth and Decay Functions	1	Write and graph exponential growth and decay functions.	• I can identify and graph exponential growth and decay functions. • I can write exponential growth and decay functions. • I can solve real-life problems using exponential growth and decay functions.
A2.NQ.A.2, A2.IF.A.2	6.2 The Natural Base e	1	Use the natural base e and graph natural base functions.	• I can explain the natural base e. • I can simplify natural base expressions. • I can graph natural base functions. • I can solve real-life problems using exponential growth and decay functions.
A2.SSE.A.1, A2.IF.A.1	6.3 Logarithms and Logarithmic Functions	1	Understand logarithms and graph logarithmic functions.	• I can explain the meaning of a logarithm with base b. • I can evaluate logarithmic expressions. • I can graph logarithmic functions.

A2.NQ.A.2, A2.IF.A.1, A2.BF.A.3	6.4 Transformations of Exponential and Logarithmic Functions	1	Describe and graph transformations of exponential and logarithmic functions.	• I can describe transformations of exponential and logarithmic functions. • I can graph transformations of exponential and logarithmic functions. • I can write functions that represent transformations of exponential and logarithmic functions.
A2.SSE.A.3	6.5 Properties of Logarithms	1	Use properties of logarithms.	• I can evaluate logarithms. • I can expand or condense logarithmic expressions. • I can explain how to use the change-of- base formula.
A2.SSE.A.2, A2.SSE.A.3, A2.REI.A.1	6.6 Solving Exponential and Logarithmic Equations	2	Solve exponential and logarithmic equations and inequalities.	• I can solve exponential equations. • I can solve logarithmic equations. • I can solve exponential and logarithmic inequalities.

Engaging Scenarios

Engaging Scenarios: There are several options for engaging scenarios for this unit. They may be appropriate as a means for introducing concepts in the unit, as a unit-long project for attaching learning to, or as a culminating experience at the end of the unit.

- Performance Task found in the Big Ideas Assessment Book (accessible in the physical Assessment Book, or the digital version in the Assess area of the Featured Chapter Resources after selecting the appropriate Chapter).

- Performance Task found in the Teach area of the Featured Chapter Resources after selecting the appropriate Chapter.

Unit 9: Rational Functions

Subject: Accelerated Algebra II

Grade: 9-12

Name of Unit: Rational Functions

Length of Unit: 9 Blocks (7 for learning, 2 for review and assessment)

Overview of Unit: This unit extends students' knowledge of functions to rational functions. Students will study the behavior and graphs of rational functions

Priority Standards for unit:

- A2.IF.A.1 Identify and interpret key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.
- A2.BF.A.3 Describe the effects of transformations algebraically and graphically, creating vertical and horizontal translations, vertical and horizontal reflections and dilations (expansions/compressions) for linear, quadratic, cubic, square and cube root, absolute value, exponential and logarithmic functions.
- A2.APR.A.2 Understand the Remainder Theorem and use it to solve problems.
- A2.REI.A.1 Create and solve equations and inequalities, including those that involve absolute value.

Supporting Standards for unit:

- A2.APR.A.3 Find the least common multiple of two or more polynomials.
- A2.NQ.A.4 Solve equations involving rational exponents and/or radicals and identify situations where extraneous solutions may result.
- A2.REI.A.2 Solve rational equations where numerators and denominators are polynomials and where extraneous solutions may result.

Priority Standard	Unwrapped Concepts (Students need to know)	Unwrapped Skills (Students need to be able to do)	Bloom's Taxonomy Levels	Webb's DOK
A2.IF.A.1	key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.	Identify	Understand	1

A2.IF.A.1	key characteristics of functions represented graphically, with tables and with algebraic symbolism to solve problems.	Interpret	Apply	2
A2.BF.A.3	the effects of transformations algebraically and graphically, creating vertical and horizontal translations, vertical and horizontal reflections and dilations (expansions/compressions) for linear, quadratic, cubic, square and cube root, absolute value, exponential and logarithmic functions. A2.REI.A.1	equations and inequalities, including those that involve absolute value.	Create	Create	4
A2.REI.A.1	equations and inequalities, including those that involve absolute value.	Solve	Apply	2

Essential Questions:

1. Why do asymptotes exist?
2. Are a rational expression and its simplified form equivalent?
3. Why are rational functions useful in the real world?
4. Why do extraneous solutions sometimes arise when solving rational equations?

Enduring Understanding/Big Ideas:

1. A rational function is a ratio of polynomial functions. If a rational function is in simplified form and the polynomial in the denominator is not constant, the graph of the rational function features asymptotic behavior.
2. Rational functions are found in real life phenomena that deal with rate of change.
3. When solving rational equations, extraneous solutions may exist and need to be addressed.

Unit Vocabulary:

Academic Cross-Curricular Words	Content/Domain Specific
	rational functions difference of squares sum and difference of cubes trinomial trial and error factoring method factoring by grouping rational expression complex fraction (mixed quotients) factoring method factoring by grouping rational expression complex fraction (mixed quotients) LCM of polynomials lowest common denominator (LCD) adding rational expressions subtracting rational expressions multiplying rational expressions dividing rational expressions rational equations domain restrictions extraneous solutions vertical asymptotes horizontal asymptotes rational inequalities nonlinear inequalities sign chart

Big Ideas Chapter

Standard	Topic & Section	Suggested # of Days	Learning Target	Success Criteria
A2.IF.A.1, A2.BF.A.3	7.2 Graphing Rational Functions	3	Describe and graph rational functions.	- I can graph rational functions. - I can describe transformations of rational functions. - I can explain how to find the horizontal & vertical asymptotes of a rational function from an equation. - I can write rational functions in different forms.
A2.APR.A.3	7.3 Multiplying and Dividing Rational Expressions	1	Multiply and divide rational expressions.	- I can simplify rational expressions and identify any excluded values. - I can multiply rational expressions. - I can divide rational expressions.
A2.APR.A.2, A2.APR.A.3	7.4 Adding and Subtracting Rational Expressions	2	Add and subtract rational expressions.	- I can add and subtract rational expressions with like denominators. - I can explain how to find a common denominator for rational expressions. - I can add and subtract rational expressions with unlike denominators.
A2.NQ.A.4, A2.REI.A.1, A2.REI.A.2	7.5 Solving Rational Equations	1	Solve rational equations.	- I can solve rational equations by cross multiplying and by using least common denominators. - I can identify extraneous solutions of rational equations.

Engaging Scenarios

Engaging Scenarios: There are several options for engaging scenarios for this unit. They may be appropriate as a means for introducing concepts in the unit, as a unit-long project for attaching learning to, or as a culminating experience at the end of the unit.

- Performance Task found in the Big Ideas Assessment Book (accessible in the physical Assessment Book, or the digital version in the Assess area of the Featured Chapter Resources after selecting the appropriate Chapter).
- Performance Task found at the end of the chapter in Big Ideas.
- Performance Task found in the Teach area of the Featured Chapter Resources after selecting the appropriate Chapter.

Unit 10: Probability, Data Analysis & Statistics

Subject: Accelerated Algebra II

Grade: 9-12

Name of Unit: Probability, Data Analysis & Statistics

Length of Unit: Remainder of time before finals or EOC. Pacing is suggested, given enough time. 12 blocks (10 for learning, 2 for review and assessment)

Overview of Unit: In this unit, students will work to understand independent probability and conditional probability, use them to interpret data, and use probability rules to find probabilities of compound events. Then students will work to understand and evaluate processes underlying statistical experiments, and to make inferences and justify conclusions from sample surveys, experiments, and observational studies

Priority Standards for unit:

- A2.DS.A.2 Determine whether a specified model is consistent with a given data set.
- A2.DS.A.4 Use data from a sample to estimate characteristics of the population and recognize the meaning of the margin of error in these estimates.
- A2.DS.B.8 Know and use the characteristics of normally distributed data sets; predict what percentage of the data will be above or below a given value that is a multiple of standard deviations above or below the mean.

Supporting Standards for unit:

- A2.DS.A.1 Analyze how random sampling could be used to make inferences about population parameters.
- A2.DS.A.3 Describe and explain the purposes, relationship to randomization and differences, among sample surveys, experiments and observational studies.
- A2.DS.A.5 Describe and explain how the relative sizes of a sample and the population affect the margin of error of predictions.
- A2.DS.A.6 Analyze decisions and strategies using probability concepts.
- A2.DS.A.7 Evaluate reports based on data.
- A2.DS.B.9 Fit a data set to a distribution using its mean and standard deviation to determine whether the data is approximately normally distributed.

Priority Standard	Unwrapped Concepts (Students need to know)	Unwrapped Skills (Students need to be able to do)	Bloom's Taxonomy Levels	Webb's DOK
A2.DS.A.2	whether a specified model is consistent with a given data set.	Determine	Apply	2
A2.DS.A.4	data from a sample	Use	Understand	1
A2.DS.A.4	characteristics of the population	estimate	Apply	2
A2.DS.A.4	the meaning of the margin of error in these estimates.	Recognize	Understand	1
A2.DS.B.8	the characteristics of normally distributed data sets;	Know	Understand	1
A2.DS.B.8	the characteristics of normally distributed data sets;	use	Understand	1
A2.DS.B.8	what percentage of the data will be above or below a given value that is a multiple of standard deviations above or below the mean.	Predict	Apply	2

Essential Questions:

1. What are some considerations when undertaking a statistical study?
2. How can you use a sample survey to infer a conclusion about a population?
3. How can an unbiased sample and an unbiased survey be constructed?
4. How can one determine if the outcome to an experiment is significant?
5. What are the key characteristics of a normal distribution?
6. How can one determine how many different ways there are to group items?
7. How can one compute the probability of an event occurring a certain number of times?

Enduring Understanding/Big Ideas:

1. Sample populations and survey questions must be carefully constructed.
2. Simple statistical calculations can be used to evaluate reports based on data.
3. Combinations can be used to compute the number of possible groups, as well as to help calculate binomial probabilities
4. A normal distribution has the majority of its data centered at the mean, with the standard deviation being a measure of its spread.

Unit Vocabulary:

Academic Cross-Curricular Words	Content/Domain Specific
	outcome event theoretical probability geometric probability experimental probability independent events dependent events two-way table hypothesis random sample convenience sample unbiased sample biased sample survey simulation biased question

Big Ideas Chapters 8 & 9

Standard	Topic & Section	Suggested # of Days	Learning Target	Success Criteria
	8.1 Sample Spaces and Probability	1	Find sample spaces and probabilities of events.	- I can list the possible outcomes in a sample space. - I can find theoretical probabilities. - I can find experimental probabilities.
A2.DS.A.6	8.2 Two-Way Tables and Probability		Use two-way tables to represent data and find probabilities.	- I can make two-way tables. - I can find and interpret relative frequencies and conditional relative frequencies. - I can use conditional relative frequencies to find probabilities.
A2.DS.A.6	8.3 Conditional Probability		Find and use conditional probabilities.	- I can explain the meaning of conditional probability. - I can find conditional probabilities. - I can make decisions using probabilities.
A2.DS.A.6	8.4 Independent and Dependent Events	1	Understand and find probabilities of independent and dependent events.	- I can explain how independent events and dependent events are different. - I can determine whether events are independent. - I can find probabilities of independent and dependent events.

A2.DS.A.6	8.5 Probability of Disjoint and Overlapping Events		Find probabilities of disjoint and overlapping events.	• I can explain how disjoint events and overlapping events are different. • I can find probabilities of disjoint events. • I can find probabilities of overlapping events. • I can solve real-life problems using more than one probability rule.
A1.DS.A.3	Measures of Central Tendency & Variance <i>Algebra 1 Section: 11.1 Measures of Center and Variation</i>	1	Find measures of center and variation of a data set.	• I can find and compare the measures of center of a data set. • I can find measures of variation of a data set. • I can describe effects of data transformations.
A2.DS.A.7	9.1 Using Normal Distributions	2	Understand normal distributions.	• I can find probabilities in normal distributions. • I can interpret normal distributions. • I can find probabilities in standard normal distributions.
A2.DS.A.1, A2.DS.A.7, A2.DS.B.8 , A2.DS.B.9	9.2 Populations, Samples, and Hypotheses	1	Use random samples and simulations to make conclusions.	• I can distinguish between populations and samples. • I can find a sample proportion. • I can use a simulation to test a hypothesis.
A2.DS.A.2 , A2.DS.A.3, A2.DS.A.7	9.3 Collecting Data	1	Describe sampling methods and recognize bias when collecting data.	• I can identify types of sampling methods in statistical studies. • I can analyze methods of collecting data. • I can describe bias in sampling and in survey questions.
A2.DS.A.2 , A2.DS.A.3, A2.DS.A.7	9.4 Experimental Design	1	Describe and analyze experiments and their designs.	• I can assess the validity of an experiment's results. • I can design an experiment or observational study. • I can analyze experimental designs.

A2.DS.A.1, A2.DS.A.2 , A2.DS.A.4 , A2.DS.A.5, A2.DS.A.7	9.5 Making Inferences from Sample Surveys	1	Use sample surveys to make conclusions about populations.	● I can estimate population parameters. ● I can analyze the accuracy of a hypothesis using simulations. ● I can find margins of error for surveys.
A2.DS.A.1, A2.DS.A.2 , A2.DS.A.7	9.6 Making Inferences from Experiments	1	Understand how to make inferences from experiments.	● I can analyze data from an experiment. ● I can explain how to resample data. ● I can use resampling to make inferences about a treatment.

Engaging Scenarios

Engaging Scenarios: There are several options for engaging scenarios for this unit. They may be appropriate as a means for introducing concepts in the unit, as a unit-long project for attaching learning to, or as a culminating experience at the end of the unit.

- Performance Task found in the Big Ideas Assessment Book (accessible in the physical Assessment Book, or the digital version in the Assess area of the Featured Chapter Resources after selecting the appropriate Chapter).
- Performance Task found at the end of the chapter in Big Ideas.
- Performance Task found in the Teach area of the Featured Chapter Resources after selecting the appropriate Chapter.

Unit of Study Terminology

Appendices: All Appendices and supporting material can be found in this course's shell course in the District's Learning Management System.

Assessment Leveling Guide: A tool to use when writing assessments in order to maintain the appropriate level of rigor that matches the standard.

Big Ideas/Enduring Understandings: Foundational understandings teachers want students to be able to discover and state in their own words by the end of the unit of study. These are answers to the essential questions.

Engaging Experience: Each topic is broken into a list of engaging experiences for students. These experiences are aligned to priority and supporting standards, thus stating what students should be able to do. An example of an engaging experience is provided in the description, but a teacher has the autonomy to substitute one of their own that aligns to the level of rigor stated in the standards.

Engaging Scenario: This is a culminating activity in which students are given a role, situation, challenge, audience, and a product or performance is specified. Each unit contains an example of an engaging scenario, but a teacher has the ability to substitute with the same intent in mind.

Essential Questions: Engaging, open-ended questions that teachers can use to engage students in the learning.

Priority Standards: What every student should know and be able to do. These were chosen because of their necessity for success in the next course, the state assessment, and life.

Supporting Standards: Additional standards that support the learning within the unit.

Topic: These are the main teaching points for the unit. Units can have anywhere from one topic to many, depending on the depth of the unit.

Unit of Study: Series of learning experiences/related assessments based on designated priority standards and related supporting standards.

Unit Vocabulary: Words students will encounter within the unit that are essential to understanding. Academic Cross-Curricular words (also called Tier 2 words) are those that can be found in multiple content areas, not just this one. Content/Domain Specific vocabulary words are those found specifically within the content.
