

Skills for Success

I graduated LHS in 2012. From there I attended Ohio State University and graduated with a Bachelors in Construction Systems Management. After graduation I hired on with a large general contractor who moved me to New York and then Austin, Texas for work (per my request). I have since left the commercial construction sector and moved to the industrial side. I am now the East Coast Project Manger for a company that builds power plants, and electrical sub-stations.

I would not be able to have the career I do today if I did not enroll in the West Shore construction program. Construction trades with Mr. Dow not only sparked my interest in the construction industry; it taught me about life and how to succeed.

This class is the most fun course you will ever take whether that be in high school or college. You will build friendships that will last into adulthood and create memories that you can look back on for years to come. You have an opportunity in this class to jump ahead of most kids your age, leaving high school with the ability to jump right into the work force is an advantage most wont get. If you decide to pursue construction at the college level you can count on making a higher salary than most of your classmates with different majors. Respectfully, Mason Gilbert Project Manager (East Coast)

Mason Gilbert, Class of 2012
