

Dear Parent or Caregiver,

Vision screenings will be conducted at your child's school to determine if your child may have difficulty seeing. Vision To Learn's mobile eye clinic that provides free eye exams and free eyeglasses is coming in the next few weeks and can help your child's vision. Since 80% of children's learning is obtained through vision, when children can see well they can be more successful at school. Here's how the program works:

1. Send your signed Consent Form back to the school/organization, giving Vision To Learn permission to examine your child's eyes.
2. The Vision To Learn mobile clinic will arrive at the school/organization and a representative will take your child to our mobile clinic to be examined by an Optometrist and Optician.
3. If needed, the doctor will prescribe eyeglasses for your child.
4. Children choose frames they like and get fitted for glasses.
5. In 2-3 weeks, eye care professionals will return to the school/organization to deliver your child's eyeglasses and make sure they fit correctly.

If you have questions or need further information, please contact your school nurse.
