

Adding Printers

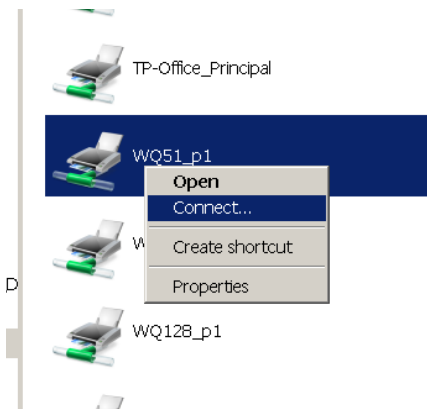

1. Open up a Windows explorer window. You can do this by clicking on the folder icon down in your taskbar, or you can right click on your start menu icon.

2. Type “\xander” in the location bar and press enter, you should see all the available printers appear.

3. Locate the printer you want, right click on it and select “Connect...”

4. If you're asked to download any drivers, click yes.
5. Your printer should now be available to use. If you don't see it in your Chrome browser right away, try closing and reopening Chrome or simply restart your computer.
