Letter from the Middle/High School Principal

August, 2022

Dear Students and Parents,

The American International School of Lago's High School Program Guide has been designed to be an essential resource to provide clarity pertaining to programming as well as a tool to assist in planning the academic program in the high school.

This handbook contains descriptions of subjects offered in grades 9 through 12 as well as the various units of study that make up each subject area's program of learning. This will help prospective parents understand how AISL curriculum will be viewed in relation to a current system of study and will also be an important reference for students when planning the schedule of courses for the upcoming year.

Please do not hesitate to consult with me or our school's academic counselor in order to make the best decisions in the course selection process.

Best regards,

John Powell
Middle/High School Principal
jpowell@aislagos.org

AISL High School Program Overview

The AISL High School is committed to helping all students in Grades 9-12 *be the best versions of themselves so they can joyously soar on their own paths of learning, growing, leading, and contributing as world citizens.* The High School realizes this commitment by offering a broad and balanced curriculum with a strong academic foundation. All AISL students have the opportunity to earn the American High School Diploma and the International Baccalaureate Diploma Program. The AISL High School program is designed to support students as they develop their abilities to think critically, to communicate effectively, and to learn independently. Each year AISL graduates are accepted at selective colleges and universities around the world.

As stated in the AISL Vision, the High School is designed to equip students with the knowledge, skills, and attitudes necessary to create a just and sustainable world.

High School Grades 9-10

Core Courses

Students in Grades 9-10 are required to take the following courses:

- English
- Sciences
- Mathematics
- Social Studies
- Health/Physical Education

World Language

Students in Grades 9-10 have the opportunity to study one of the following World Languages:

- French
- Spanish
- Arabic

Elective Courses

In addition to the core courses and modern languages, Grades 9-10 are able to take one semester or one year elective courses in the following areas:

- Band
- Performing Arts
- Visual Arts
- Archeology
- Public Speaking
- Technology- Programming

High School Grades 11-12 - International Baccalaureate Diploma Program

AISL offers the International Baccalaureate Diploma Program (IB DP) to students in Grades 11-12.

The IB DP is a challenging, externally assessed and moderated, two-year course of study.

Academically comprehensive and globally recognized, the IB Diploma program prepares students for entry to university systems all over the world. It is a philosophically coherent program of studies that seeks to develop in students not only a respect for intellectual rigor in the arts and sciences but also an appreciation of internationalism, global awareness, and social service. The IB Diploma curriculum is made up of the DP core and six subject groups.

DP Core

Made up of the three required components, the DP core aims to broaden students' educational experience and challenge them to apply their knowledge and skills. The three required core components are:

- **Theory of knowledge**, in which students reflect on the nature of knowledge and on how we know what we claim to know.
- **The extended essay**, which is an independent, self-directed piece of research, finishing with a 4,000-word paper.
- **Creativity, activity, service**, in which students complete a project related to those three concepts.

Six Subject Groups

To obtain the IB Diploma, students must satisfy the curricular requirements of six IB subjects taken concurrently during the last two years of high school.

- Group 1: Studies in language and literature
- Group 2: Language acquisition
- Group 3: Individuals and societies
- Group 4: Sciences
- Group 5: Mathematics
- Group 6: The Arts or Other

Students may opt to study an additional sciences, individuals and societies, or languages course, instead of a course in the arts.

Students will take some subjects at higher level (HL) and some at standard level (SL). Each student is required to take at least three (but not more than four) subjects at higher level, and the remaining at standard level in order to earn an IB Diploma. Standard level subjects take up 150 teaching hours, while higher level comprises 240 teaching hours over a two year period.

IB Certificate Candidates

Students may enroll in one or more IB subjects, either at a higher level (HL) or standard level (SL), as a part of their regular high school program and earn a certificate in that subject based upon successful completion of the course and the exam.

Pamoja and Online Learning

AISL offers online learning opportunities to enhance the IB Diploma Program through Pamoja. Pamoja is the only provider approved by the International Baccalaureate Organization to teach courses online for the IB Diploma. Pamoja provides a broad selection of courses across the IB Diploma core and the six subject groups, open to schools who offer the Diploma Programme. Our online courses cover the same course content and prepare students for the same assessments as traditional face-to-face IB DP courses. You may [click here](#) to find out more about IB courses offered through Pamoja.

School Support Self Taught Languages

If a student is interested in pursuing the IB Diploma, and wishes to study a Language A in his/her native language (other than English), AISL supports students through the School Supported Self Taught Program (SSST). This is a 2 year course in Literature for Language A and is available for students to study at Standard Level (SL) only. Students and parents need to find a tutor that would be available to support the student in their own language. Students who wish to study a Language A in his/her native language should consult with the IB Coordinator.

Visit the [IB website](#) to learn more about the philosophy underpinning the IB Diploma Programme.

AISL High School Diploma Requirements

All AISL High School students are required to earn a minimum of 26 credits in order to earn an AISL High School Diploma. Each one credit earned is equivalent to satisfactorily completing a full year class. Specific credit requirements include:

English	4 credits
Math	4 credits
World Languages	3 credits
Sciences	3 credits
Social Sciences	3 credits
Health and Physical Education	2 credits
The Arts	1 credits
Electives	6 credits

Total: **26 credits**

Student Support Services

The High School embraces diversity and is committed to supporting the learning needs of all students. Our Student Support Service Program ensures that all students have equitable access to learning and opportunities to set goals and pursue different pathways to achieve goals. Through an inclusive and nurturing educational environment, students are encouraged to become independent, lifelong learners in a global society.

English as an Additional Language

High School students who are non-native speakers of English and have gaps in their social and academic English language skills receive support in the classroom or in small groups outside of the classroom in order to access the AISL curriculum.

Learning Support

High School students who are diagnosed with a learning disability receive classroom accommodations in the classroom and targeted support in small groups outside of the classroom in order to access the AISL curriculum.

Counseling

Counseling services (MS/HS Counselors and IB Coordinator) are available to provide high school students with academic counseling/course selection, social and emotional support, and career/university advising and guidance. AISL has an experienced college/career counseling professional who works closely with students and their parents, assisting in all areas of the college search and application process.

Other Programs

The following programs are designed to support student achievement, well being, and success in the High School.

Advisory

The Advisory Program is a support system designed to help students feel a sense of belonging and connection to the High School. Each student is assigned to a teacher/ advocate who is responsible for overseeing that student's total performance and involvement in the High School. This program is enriched through lessons and special programs focused on self concept/identity, relationship building, responsible decision making, conflict resolution, service learning, etc.

Afterschool Athletics/Activities

The High School has a vibrant co-curricular program designed to meet the passions, interests and needs of students. Each semester, High School students have an opportunity to participate in a variety of after school activities, which include intramural sports, games, digital media, art, drama, and music. Through the Western African International School Activities League (WAISAL), High School students also have opportunities to participate in athletic competitions, art festivals and leadership workshops with students attending other international schools in West Africa.

Global Online Academy (GOA)

Global Online Academy (GOA) is an international consortium of leading independent schools that offers rigorous online courses and unites behind a common mission: to reimagine learning to empower students and educators to thrive in a globally networked society.

Through GOA, AISL has both expanded the elective course offerings available to AISL students in Grades 9-12 and provided our students the unique opportunity to connect with students from across the country and around the world. (See [MS/HS Student-Parent Handbook](#) for registration guidelines and procedures) We also join a network of leading independent schools that is proactively defining this niche, creating new learning environments, developing a global community, and leveraging technology and modern learning skills to help students connect, share and learn.

[Click here](#) to discover more about GOA course offerings.

Service Learning

Through the Service Counsel, High School students have an opportunity to work with their peers, teachers, and advisors on projects that have a positive positive impact on the school campus as well as local and global communities. Through service learning, our high school students begin to develop an understanding about what it means *to create a just and sustainable world*.

Technology Integration/Digital Citizenship

Students used technology in the High School to amplify learning and increase their abilities to communicate, collaborate, express themselves creatively, think critically, and solve problems. Students leverage technology- hardware and applications- to enhance their understanding of content areas, connect to their learning community, and understand the world around them. Students are creators of content, not just consumers of content, finding original ways to demonstrate their learning through new tools. High School students also learn what it means to be a responsible digital citizen.

The partnership between school and family is essential to the success of a High School student. We look forward to working in partnership to ensure that your child feels included, challenged and successful in our High School!

English Language Arts

The English Language Arts program at AISL includes reading, writing, and the creative and analytical acts involved in producing and comprehending texts. Learners also use oral and written language to make sense of the world, and to communicate, problem solve, and participate in decision-making. The AERO English Language Arts Standards drive the development of the key skills, strategies and understandings of the essential and relevant components of 21st century literacy, so students can:

- Engage thoughtfully and critically with a wide variety of literary and informational media
- Make meaning, ask questions, and express ideas while listening, reading, and viewing
- Use language and literacy purposefully across a variety of authentic contexts to make connections, amplify experience, broaden perspective, design and share information for global communities, and reach audiences
- Communicate ideas clearly and articulately through speaking, writing, and representing
- Develop proficiency with the tools of technology
- Build relationships with others to pose and solve problems collaboratively and cross-culturally
- Manage, analyze, and synthesize multiple streams of simultaneous information

	English - Reading & Writing
9th	<ul style="list-style-type: none">● Identity● Ethics & Technology● Social Movements● Urban Visions
10th	<ul style="list-style-type: none">● Short Stories● The Great Gatsby● Macbeth, by Shakespeare● Novel Study: Purple Hibiscus, by Chimamanda Ngozi Adichie● Reading Comprehension and Academic Vocabulary

Social Studies

The AISL Social Studies program provides diverse, authentic and transferable opportunities for our Eagles to develop important skills and understandings to better comprehend the historical and current nature of the world as well as their role as global citizens of a culturally diverse, equitable, inclusive and just society in an interdependent world who can make a positive difference.

The AERO Social Studies Curriculum Standards drive the development of the key skills and understandings through eight distinct concepts: Time, Continuity and Change, Connections and Conflict, Geography, Culture, Society and Identity, Government, Production, Distribution and Consumption, and Science, Technology and Society. Through intentionally-designed units of study, learners are able to:

- Engage in inquiry and conduct research
- Draw evidence-based conclusions
- Critically and creatively apply knowledge and concepts to solve complex, authentic, ‘wicked’ problems now and in the future

The social studies units below integrate key literacy, math and where relevant science standards to ensure a rich and meaningful learning experience.

	Social Studies
9th - Social Studies	<ul style="list-style-type: none">• Identity• Ethics & Technology• Social Movements• Urban Visions
10th - Modern History	<ul style="list-style-type: none">• US Civil Rights Movement• Zionism, the Creation of Israel and the Arab-Israeli Conflict• The British in India• Ancient India to 1756• Viewpoints and Conflict

Psychology

	Psychology
11th	<ul style="list-style-type: none">• Introduction to Psychology and Quantitative Research methods• Cognitive Approach to Behavior• Biological Approach to Behavior• Memory
12th	<ul style="list-style-type: none">• Biological Approach to Human Behavior• Neurotransmitters• Human Relationships• Socio-cultural Approach to Behavior

Science

The program is driven by the Next Generation Science Standards (NGSS) with attention paid to the three dimensions of learning: the fundamental science and engineering practices, developing knowledge of the cross-cutting concepts that are foundational to science disciplines and disciplinary core ideas.

With the scientific inquiry cycle at the heart, learning is student-driven, hands-on and is centered around ‘phenomena’ that spark students' curiosity and wonder. Students will ask questions, construct explanations, plan and carry out investigations and engage in arguments from evidence, and apply and transfer their understanding through authentic, performance-based tasks and assessments. For engineering, the students explore real-life problems and take action through investigating, testing and iterative designing. Other fundamental practices developed through the curriculum include

- developing and using models,
- using mathematical and computational thinking,
- data collecting, interpreting and analyzing
- obtaining, evaluating, and communicating information.

The science units below integrate key literacy, math and social studies standards, where relevant, to ensure a rich and meaningful learning experience for students.

Integrated Mathematics

The AISL Mathematics program is driven by the AERO Mathematical standards which places emphasis on the conceptual underpinnings of mathematics as part of developing a deep understanding of mathematical strands rather than solely arithmetic. Mathematical understanding involves students:

- engaging in relevant, authentic, rich tasks that invite inquiry and investigation
- posing questions to identify and solve problems using a variety of tools and strategies
- using math practices to solve problems and justify answers
- Strengthening and employing fluency of procedural skills (operations, tools, strategies)
- discovering multiple methods for seeking solutions
- developing critical, creative, logical and computational thinking
- communicating mathematical ideas with accuracy, precision and clarity

Performing Arts and Visual Arts

Performing Arts

Length: Year

The Performing Arts program at AISL follows the National Core Arts Standards which define artistic literacy and clarify connections between the arts and 21st century skills. By nature of living in a country that is rich with culture as well as being a school serving students of multiple nationalities, AISL celebrates our rich diversity through the expression of human creativity and imagination.

The Performing Arts course incorporates dance/movement, music (instruments, singing), and theater. Through a variety of opportunities, Eagles artistically express their interpretation of the world around them where they are able to Create, Present, Respond and Connect. Students are given opportunities for student choice, student voice, and Student Directed Learning (SDL) throughout the courses.

The performing arts units below ensure a rich and meaningful learning experience for the students.

	Performing Arts (Year Long Course)						
Grades 9, 10, 11, 12 (mixed classes)	<p>Year Long Overarching Program- Creating and Building an Ensemble</p> <p>Units consist of:</p> <table style="width: 100%; border: none;"> <tr> <td style="width: 33%; vertical-align: top;">Dance/Movement:</td> <td style="width: 33%; vertical-align: top;">Music:</td> <td style="width: 33%; vertical-align: top;">Theatre:</td> </tr> <tr> <td style="vertical-align: top;">Cultural Dance Modern Dance World Dance Ballroom Dance</td> <td style="vertical-align: top;">Choral Speaking Choir Singing Duet/Solo Singing Instrument Playing</td> <td style="vertical-align: top;">Improvisation Devising Theatre Physical Theatre Monologues, Duologues</td> </tr> </table> <p><u>Semester 1 1st half</u> Exploring the Performing Arts disciplines - Dance/Movement, Music (singing, playing instruments), Theatre</p> <p><u>Semester 1 2nd half</u> Quality skills, knowledge, and attitudes for performance</p> <p><u>Semester 2 1st half</u> Creating Performances with an intended purpose and intended audience</p> <p><u>Semester 2 2nd half</u> Expressing Social, Emotional and Mental Health Issues in Performing Arts (all Performing Arts disciplines)</p>	Dance/Movement:	Music:	Theatre:	Cultural Dance Modern Dance World Dance Ballroom Dance	Choral Speaking Choir Singing Duet/Solo Singing Instrument Playing	Improvisation Devising Theatre Physical Theatre Monologues, Duologues

- Present
- Respond
- Connect

	Visual Arts
Grades 9, 10, 11, 12 (mixed classes)	<ul style="list-style-type: none">• Foundations of Printing• Drawing Skills and Techniques• Sculpture - 3D Form, Space and Perception

Physical Education

Learning in physical education is driven by the National Physical Education Standards (SHAPE), which focus on leading students to:

- establish habits for good health,
- develop fundamental and advanced motor skills
- improve self-confidence
- increase levels of physical fitness that are associated with high academic achievement.

Additionally, it encourages Eagles to develop personal and social behaviors, including self-management, sportsmanship, problem-solving, safety and communication skills that encourage respect for self and others. Similarly, the patterns of physical activity acquired during childhood and adolescence are likely to be maintained throughout our graduates' lifespan, providing physical, mental, self-expression and social benefits.

	Physical Education	Sports Training	Self-Defense
Grades 9, 10, 11, 12 (mixed classes)	<ul style="list-style-type: none"> ● Team and individual sports / fitness activities ● Mental health ● Health check ups ● Environmental health ● Sleep ● Conflict ● HIV/AIDS ● Chronic disease ● Nutrition ● Eating disorders ● Dehydration ● Drug abuse ● Ergogenic drugs 	<ul style="list-style-type: none"> ● Team and individual sports /fitness activities ● Human anatomy & physiology ● Illness & disease ● Food & nutrition ● Principles of training ● Illegal drug use ● Ergogenic drug use ● Sporting injuries 	<ul style="list-style-type: none"> ● Principles of Self Defense: ● Avoidance ● Awareness ● Choice of defense ● Hand to hand combat techniques from Karate, Judo, Aikido and Jujitsu. ● The use of common implements for self-defense. ● Fitness and conditioning for self-defense. ● Studies on: Peer pressure, Road rage, Drugs and violence, Sexual harassment, internet safety, Kidnapping etc.

World Language

Learning a world language has the power to foster an understanding of the interrelation of language, culture and human nature. At the most basic level, it teaches and encourages respect for other peoples by expanding one's view of the world, liberalizing one's experiences, and inviting more flexibility and tolerance. At AISL, the ACTL World Language Standards provide the skills and understandings for students to:

- Communicate ideas through spoken language, in writing and through presentation
- Comprehend spoken language and written texts
- Communicates with cultural competence regarding cultural artifacts, practices, and beliefs of the language.

Students follow the placement guidelines, see the [placement document](#) for further information.

Grades 9 & 10: AP Computer Science A

AP Computer Science A introduces students to computer science through programming. Fundamental topics in this course include the design of solutions to problems, the use of data structures to organize large sets of data, the development and implementation of algorithms to process data and discover new information, the analysis of potential solutions, and the ethical and social implications of computing systems. The course emphasizes object-oriented programming and design using the Java programming language.

2022-2023 Course Offerings

English Department

Students taking IB English will be encouraged to purchase their novels from our bookstore so that they are able to highlight, underline and take notes directly on the text. *This is not a required strategy – but students in the IB program, in particular, have found this strategy to be most helpful.*

English 1 7010 & Social Studies 7310

Prerequisite: None

Length: One year

Credit: One full credit for English; one full credit for Social Studies

Description: This course will combine English and social studies through the project-based learning framework. This cross-curricular approach is designed to develop a process for problem solving and inquiry. It seeks to develop independent thinkers and autonomous learners while fostering the 21st-century skills of critical thinking, communication, creativity, and collaboration. Projects are guided by driving, or essential, questions that are designed to be authentic and applicable in real-world contexts. Students direct their own learning as they seek to find their own solutions or answers to the question. Each project includes an integrated novel study, related to the theme of the project. Students are introduced to visible thinking routines to cultivate the development of their critical thinking skills and to deepen content learning. They will also develop their research and writing skills (narrative, expository and persuasive) throughout each of the projects.

English II 7021

Prerequisite: Successful completion of English I

Length: One year

Credit: One full credit

Description: English II is an IB-preparatory, literature-based course focused on the reading of various literary genres, including but not limited to short novels, essays, drama, and poetry. The overall aims of the course are to develop the power of oral and written expression and to encourage a personal connection to literature through reading and analysis. Students utilize visible thinking routines to cultivate the development of their critical thinking skills and to deepen content learning. English II prepares students for success in the IB program, expanding students' ability to actively process their thinking and problem solving, foster a creative mindset, and articulate their learning orally and in writing.

English III 7030

Prerequisite: Successful completion of English II

Length: One year

Credit: One full credit

Description: This course focuses on challenging texts in multiple genres and historical periods from internationally acclaimed authors. The student will develop a global perspective on the human experience and a personal appreciation of literature. Students learn the language of literary analysis in order to be able to systematically analyze a writer's style, use of structure and content. Vocabulary development and improving writing skills will be a central focus throughout this course.

English IV 7040

Prerequisite: Successful completion of English III

Length: One year

Credit: One full credit

Description: This course builds on the existing curriculum of English III by adding authors and works in poetry, short stories, essays, drama, and film. Students are expected to master the skills for literary analysis and written composition and also to enrich their English language versatility through the study of vocabulary.

IB English SL I 7031 / IB English SL II 7041

Prerequisite: Successful completion of English II

Length: Two Years

Credit: One full credit per year

Description: This course focuses on challenging texts in multiple genres and historical periods from international authors. The IB student will develop a global perspective of the human experience and a personal appreciation of literature. Students learn the language of literary analysis in order to be able to systematically analyze a writer's style, use of structure and content. The IB II course builds on the existing curriculum by adding authors and works in poetry, short stories and essays. Students are expected to master the skills for literary analysis, written composition and oral presentation.

IB English HL I 7032/ IB English HL II 7042

Prerequisite: Successful completion of English II

Length: Two Years

Credit: One full credit per year

Description: This course focuses on challenging texts in multiple genres and historical periods from international authors. The IB student will develop a global perspective of the human experience and a personal appreciation of literature. Students learn the language of literary analysis in order to be able to systematically analyze a writer's style, use of structure and content. At this level, students take on additional coursework in preparation for the higher-level exams. Students are expected not only to increase organizational and analytical writing skills but are also expected to complete sophisticated comparisons of authors and works. This course adds requirements and course load to the standard level IB English II course.

English Language Learning Department

English Communication Courses or courses taken in the English Language Learning Department do not count towards the 4 credits needed for English in order to graduate. They may count as elective courses.

Eng Communication 1 7012

Prerequisite: None

Length: One Year

Credit: One full Elective credit

Description: The English Communication 1 course is designed to help students reach grade-level proficiency in English Literature, as well as enhance and improve their oral and written English communication skills. To achieve this goal, students will read and discuss a variety of grade-level texts. They will produce oral and written responses. This course will help them improve their organizational and analytical writing skills.

Eng Communication 2 7020

Prerequisite: None

Length: One Year

Credit: One full Elective credit

Description: The English Communication 2 course is designed to further enhance Eng Com 1 skills and help students reach the required grade-level proficiency in English Literature in preparation for AIS diploma & IB. To achieve this goal, students will read and discuss a variety of grade-level texts. They will produce oral and written responses. This course will help them improve their organizational and analytical writing skills.

Math Department

Integrated Math 9 7113

Prerequisite: Successful completion of 8th-grade mathematics course

Length: One Year

Credit: One full credit

Description: Integrated Math 9 is a problem-solving and applications based course. The course combines aspects of algebra, functions, geometry, trigonometry, and statistics, allowing students to extend their thinking and understanding and apply it in a variety of contexts. Technology will be used to develop and enhance student understanding of major concepts in mathematics. The major course content includes linear equations and inequalities; coordinate geometry; data modeling and statistics; geometry and right triangle trigonometry, exponents and exponential functions; and an introduction to quadratic functions. A TI-NSpire (non-CAS) calculator is required for this course. Students who successfully complete the Integrated Math 9 course will be eligible to move on to the Integrated Math 10 course the following year.

Integrated Math 10 7120

Prerequisite: Successful completion of Integrated Math 9 or similar mathematics course

Length: One Year

Credit: One full credit

Description: Integrated Math 10 is the continuation of the Integrated Math 9 course and is the final step in the preparation for the IB Mathematics courses offered at AISL. It is a course that focuses on functions and their applications. Problem-solving and effective use of technology is emphasized throughout the course. The major course content includes quadratic functions; functions and their transformations; exponential and logarithmic functions; trigonometry and trigonometric functions; and probability. A TI-NSpire (non-CAS) calculator is required for this course. Students who successfully complete the Integrated Mathematics 10 course will be fully prepared for one of the IB Mathematics courses offered at AISL, depending on the level of achievement, mathematical abilities, and the approaches to learning demonstrated throughout the course.

Integrated Math 10 Extended 7121

Prerequisite: Successful completion of Integrated Math 9 with a grade of B+ or above and teacher recommendation

Length: One Year

Credit: One full credit

Description: The contents of this course will follow the Integrated Math 10 course above but taught at a higher level that includes more in-depth analysis in preparation for the IB's higher-level courses. There will be commonalities with the standard math course but with an extended study of Exponential and Trigonometric Functions, an introduction to calculus and a focus on problem-solving. This course will also cover aspects of probability not covered in the standard level course. A TI-NSpire (non-CAS) calculator is required for this course.

IB Math Applications and Interpretations SL I 7133 / II 7143

Prerequisite: Successful completion of Integrated Math 10 with C or above

Length: Two Years

Credit: One full credit per year

Description: This course is designed for students who enjoy solving practical problems using mathematics and using mathematics to describe and model the real world. The course is most suitable for those students who are interested in harnessing the power of technology alongside exploring mathematical models and who enjoy the more practical side of mathematics. The five core topics are Number and Algebra, Functions, Geometry and

Trigonometry, Statistics and Probability, and Calculus. There will also be 30 hours of the course devoted to investigative, problem solving, and inquiry activities culminating in a written exploration that involves investigation, problem-solving and modeling skills. This course is ideal for students who wish to gain understanding and competence in how math relates to the real world and to other subjects. A TI-NSpire (non-CAS) calculator is required for this course.

IB Math Analysis and Approaches SL I 7135 / II 7145

Prerequisite: Successful completion of Integrated Math 10 with B or above and the recommendation of the teacher.

Length: Two Years

Credit: One full credit per year

Description: This course is intended for students who wish to pursue studies in mathematics or subjects that have a large mathematical content at university; it is for students who enjoy developing mathematical arguments, problem-solving and exploring real and abstract applications, with and without technology. The five core topics are Number and Algebra, Functions, Geometry and Trigonometry, Statistics and Probability, and Calculus. There will also be 30 hours of the course devoted to investigative, problem solving, and inquiry activities culminating in a written exploration that involves investigation, problem-solving and modeling skills. This course differs from Applications and Interpretations as it will include non-calculator based assessments and considers formal argument and proof and involves contexts developed purely within the domain of mathematics. It is ideal for students who wish to study math as a subject in its own right or to pursue their interests in areas related to mathematics. A TI-NSpire (non-CAS) calculator is required for this course.

IB Math Analysis and Approaches HL I 7136 / II 7146

Prerequisite: Successful completion of Integrated Math 10 with A- or above and the recommendation of the teacher.

Length: Two Years

Credit: One full credit per year

Description: This is a challenging course that requires very strong algebra and analytical skills. Students will be faced with situations in which they have to create equations from very unfamiliar situations. The course allows the use of technology, as fluency in relevant mathematical software and hand-held technology is important regardless of choice of course. However, Mathematics: Analysis and Approaches has a strong emphasis on the ability to construct, communicate and justify correct mathematical arguments with and without technology. The five core topics are Number and Algebra, Functions, Geometry and Trigonometry, Statistics and Probability, and Calculus. There will also be 30 hours of the course devoted to investigative, problem solving, and inquiry activities culminating in a written exploration that involves investigation, problem-solving and modeling skills. This course differs from Applications and Interpretations as it will include non-calculator based assessments and considers formal argument and proof and involves contexts developed purely within the domain of mathematics. It is ideal for students who wish to study math as a subject in its own right or to pursue their interests in areas related to mathematics. A TI-NSpire (non-CAS) calculator is required for this course.

Science Department

Chemistry I 7220

Prerequisite: Successful completion of Integrated Math 9 (Recommended 4 or better)

Length: One Year.

Credit: One full credit

Description: Chemistry 1 introduces students to the relationship between the structure of matter and its chemical and physical properties. It is a constructivist approach so that students develop a better understanding of the physical processes they observe on a daily basis. Topics that are explored include: modern atomic theory, quantitative description of chemical processes, the periodic properties of matter, the physical structure of matter; including the bonding of molecules, the role of energy in reactions, factors that influence the speed of reactions, factors that influence the completeness of a chemical reaction, and the properties of acids and bases. Students will also develop skills in designing and performing laboratory experiments.

IB Chemistry SL I 7230/ IB Chemistry SL II 7240

Prerequisite: Successful completion of Chemistry I (Recommended 4 or better) and Integrated Math 10 (Recommended 4 or better)

Length: Two Years.

Credit: One full credit per year

Description: In this course, students will further investigate how the structure of atoms and molecules determines the physical and chemical properties of matter. Students will study topics in quantitative chemistry, atomic structure, periodicity, bonding, energetics, kinetics, equilibrium, acids and bases, organic chemistry, and oxidation and reduction. An additional topic beyond the core is required and students will study "Medicinal Chemistry" to meet this requirement. The students also develop skills in conducting laboratory experiments and evaluating the results conducting a minimum of 40 hours of laboratory work over the two year period. During IB Chemistry II Students will also conduct an Internal Assessment laboratory project comprised of approximately 10 hours of individual research and a 7-12 page formal report which constitutes 20% of their IB score.

IB Chemistry HL I 7233/ IB Chemistry HL II 7243

Prerequisite: Successful completion of Chemistry I (Recommended 5 or better) and Integrated Math 10 (Recommended 4 or better)

Length: Two Years.

Credit: One full credit per year

Description: This course studies the topics listed above in IB Chemistry SL I to a greater extent and depth. The HL course also involves a more mathematical description of chemical processes. These students will have completed a minimum of 60 hours of laboratory work over the two year period. The majority of these students will be expected to include science as a major component of their university studies.

Biology I 7210

Prerequisite: None

Length: One Year

Credit: One full credit

Description: Biology is devoted to the study of living things and their processes. Throughout the year, this course provides an opportunity for students to develop scientific process skills, laboratory techniques, and an understanding of the fundamental principles of living organisms. Students will explore biological science as a process. Chemical bonding, osmosis and diffusion, cell structure and function, genetics and heredity, evolution and

classification, diversity of living organisms and their ecological roles, and an introduction to animal structure and function.

IB Biology HL I 7234/ IB Biology HL II 7244

Prerequisite: Successful completion of Biology I and Chemistry I.

Length: Two Years

Credit: One full credit per year

Description: The course includes studies in cell anatomy, the chemistry of life, molecular biology, theoretical and applied genetics, Evolution, ecology, classification, diversity There will also be a ten-hour group research project in the second semester, as well as a substantial amount of laboratory work. Current developments in biology will be considered as they arise. IB HL Biology is for students who are strong in science and may be considering studying a biology-related degree at university. Students might consider taking IB Chemistry concurrently and would benefit from having taken Chem. 1. It will help to be conversant with a number of chemical principles both for the IB HL Biology course and for most biology-related undergraduate studies at university.

The 2nd year of the course follows studies in human health and physiology, including nutrition, transport system, defense against disease, gas exchange, homeostasis and reproduction, respiration, photosynthesis, advanced genetics, genetic engineering, plant science, and one further option chosen from a selection. There will be substantial laboratory work. Current developments in biology will be considered as they arise. Students who take this course will be expected to sit for the IB HL examination. IB Biology II also requires an Internal Assessment Laboratory project consisting of approx. 10 hours of individual research and a 7-12 page formal report.

Physics I 7221

Prerequisite: Successful completion of Integrated Math 9.

Length: One Year

Credit: One full credit

Description: Physics I is an introduction to physical principles and provides a foundation for more advanced high school studies. Great emphasis is placed on laboratory work and problem-solving skills, including gathering and presenting data from experimental work and the analysis and evaluation of these results. Topics include measurement and density, thermal properties of matter, energy and heat transfer, magnetism, and interaction with electricity, electrostatics and domestic electricity, the study of energy concepts, atomic and nuclear physics, electricity, waves and optics, and mechanics. To improve scientific literacy connections are made between science concepts and technology-related issues in society.

IB Physics SL I 7232 / IB Physics SL II 7242

Prerequisite: Successful completion of Physics I & Integrated Math 10

Length: Two Years

Credit: One full credit per year

Description: IB Physics SL is the first of a two-year IB Physics sequence, designed to prepare students for the (IB) exam in physics (SL). It covers the “core” which comprises Mechanics (Linear motion, Forces, Work, Momentum, Newton’s laws, Circular motion, electricity, magnetism, and atomic and nuclear physics, and Energy/Power) Waves, Thermal physics and Energy/Climate change. There is an emphasis on problem-solving, numerical manipulation, and laboratory skills. The SL students are required to have completed 40 hrs of laboratory investigations by the end of the 2nd year. All the standards set by IB are strictly followed, for successful completion of the program. Mathematical competence is essential

for success in this course.

IB Physics HL I 7235 / IB Physics HL II 7245

Prerequisite: Highly successful in Physics I & Integrated Math 10

Length: Two Years

Credit: One full credit per year

Description: IB Physics HL is the second of the two-year sequence, building upon topics covered in the SL course. The HL topics include fields, wave phenomena, electromagnetic induction, and quantum & nuclear physics. HL students are required to have completed 60 hrs of laboratory investigations by the end of the 2 years. All the standards set by IB are strictly followed, for successful completion of the program. Mathematical competence is essential for success in this course.

Social Sciences Department

Social Studies 7310 & English 1 7010

Prerequisite: None

Length: One year

Credit: One full credit for English; one full credit for Social Studies

Description: This course combines English and social studies through the project-based learning framework. This cross-curricular approach is designed to develop a process for problem solving and inquiry. It seeks to develop independent thinkers and autonomous learners while fostering the 21st-century skills of critical thinking, communication, creativity, and collaboration. Projects are guided by driving, or essential, questions that are designed to be authentic and applicable in real-world contexts. Students direct their own learning as they seek to find their own solutions or answers to the question. Each project includes an integrated novel study, related to the theme of the project. Students are introduced to visible thinking routines to cultivate the development of their critical thinking skills and to deepen content learning. They will also develop their research and writing skills (narrative, expository and persuasive) throughout each of the projects.

Modern World & US History 7321

Prerequisite: Successful completion of Grade 9 Social Studies

Length: One Year

Credit: One full credit

Description: This is a one-year survey course that emphasizes key events and developments in World and U.S History that have influenced both people and places in subsequent eras. The course includes, but is not limited to, a study of the impact of the Enlightenment and the French and American Revolutions upon 19th century Europe and the United States. The course examines the origins and consequences of liberalism, nationalism, capitalism, communism and fascism and the impact these ideologies, and others, have had on the social, economic and political landscape of Europe and the United States in the late 19th and 20th Century. Topics include but are not limited to, the Industrial Revolution, the World Wars and the Cold War.

IB Psychology SL I 7333

Prerequisite: None

Length: Two Years

Credit: One full credit per year

Description: The IB Psychology course examines the interaction of a variety of influences on human behavior. Students undertaking the course can expect to develop an understanding of how psychological knowledge is generated, developed and applied.

The Year One course includes an Introduction and Historical Study of the Scientific Methods of Psychology, a study of biological influences, a study of cognitive influences, and a study of socio-cultural influences, as well as a focus on the Psychology of Human Relationships option. The Internal Assessment requirements will also be initiated.

IB Psychology HL I 7336

Prerequisite: None

Length: Two Years

Credit: One full credit per year

Description: The IB Psychology course examines the interaction of a variety of influences on human behavior. Students undertaking the course can expect to develop an understanding of how psychological knowledge is generated, developed and applied.

The Year One course includes an Introduction and Historical Study of the Scientific Methods of Psychology, a study of biological influences, a study of cognitive influences, and a study of socio-cultural influences, as well as a focus on the Psychology of Human Relationships and the Abnormal Psychology options. The Internal Assessment requirements will also be initiated. In addition, the Higher Level course will begin to explore elements of Qualitative Research Methodology.

IB Economics SL I 7332/ IB Economics SL II 7343

Prerequisite: Successful completion of Math 10

Length: Two Years

Credit: One full credit per year

Description: The aim of this course is to provide students with an understanding of how individuals, organizations, societies, and regions organize themselves in the pursuit of economic objectives. Students will be encouraged to develop an interest in and an awareness of other cultures and their economic systems. The course is a two-year sequence beginning with an introduction to the topic, followed by microeconomics, macroeconomics, international trade, and development economics. Throughout the course, students will be encouraged to apply economic theory to diverse global issues and events in order to analyze and evaluate possible outcomes. For IB credit, students will complete 3 pieces of internal assessment and take the IB SL Economics exam at the end of the second year.

IB Economics HL I 7344/ IB Economics HL II 7344

Prerequisite: Must be enrolled in IB Math SL: Analysis and Approaches or IB Math HL (either course), or with math teacher recommendation.

Length: Two Years

Credit: One full credit per year

Description: The aim of this course is to provide students with an understanding of how individuals, organizations, societies, and regions organize themselves in the pursuit of economic objectives. Students will be encouraged to develop an interest in and an awareness of other cultures and their economic systems. The course is a two-year sequence beginning with an introduction to the topic, followed by microeconomics, macroeconomics, international trade, and development economics. The topics will be covered in more depth than in the SL course, and more quantitative. Students will be encouraged to apply economic theory to diverse global issues and events in order to analyze and evaluate possible outcomes. For IB credit, students will complete 3 pieces of internal assessment and take the HL Economics exam at the end of the second year.

Archeology 7353

Prerequisite: None

Length: 1 year

Credit: 1.0 credit

Description: This course focuses on the techniques, methods, and theories that guide the study of the past. Students learn how archaeological research is conducted and interpreted, as well as how artifacts are located and preserved. Finally, students learn about the relationship of material items to culture and what we can learn about past societies from these items. In this class, students will identify and analyze the ways in which archaeologists reconstruct human behavior and try to explain the social relevance of archaeology to today's world.

World Languages Department

Students taking IB French and IB Spanish will be encouraged to purchase their novels from our bookstore so that they are able to highlight, underline and take notes directly on the text.

French Beginner 7410, Spanish Beginner 7411 or Arabic Beginner 7450

Prerequisite: 5 and/or below

Length: One Year

Credit: One full credit

Description: This course is an introduction to the study of either French, Spanish, or Arabic and its culture. The emphasis is placed upon the development of the four skills of listening, speaking, reading and writing within a given context extending outside of the classroom when possible. There is a general introduction to the culture, its products, perspectives, and practices. This course also provides students with opportunities to further develop their core skills and to participate in more advanced conversational situations. Students will be able to compose simple and more advanced sentences, which narrate, describe, and summarize familiar topics. The focus is placed on using the language and communicating in a concise and organized way, both in speaking and in writing.

French Intermediate 7430, Spanish Intermediate 7438, or Arabic Intermediate

Prerequisite: Successful completion of French Beginner, Spanish Beginner, Arabic Beginner

Length: One Year

Credit: One full credit

Description: This course allows students to expand their core skills as they create with the language and become familiar with short novels, authentic materials and various forms of media. Students begin to expand their communication and social interaction demands as they explore more complex topics within the target culture. They begin to actively practice communication strategies for listening, reading, oral interaction, writing, and interactive skills. They identify the main ideas and significant details in discussions, presentations and written texts.

French Advanced 7440 or Spanish Advanced 7442

Prerequisite: Successful completion of French Intermediate or Spanish Intermediate

Length: One Year

Credit: One full credit

Description: The focus is on the revision and expansion of more complex grammatical structures in order to increase the communication of more complex ideas and comprehension of more difficult texts. Authentic topics such as global issues, communication & media, and social relations are integrated into the units and students will begin to explore a wider and greater range of authentic materials and will be reading short novels as well as some literature. They continue to actively apply communication strategies for listening, reading, oral interaction, writing, and interactive skills and are more successful at doing so. The student is expected to complete a wider variety of written tasks than previously expected.

IB French Ab I 7433/ IB French Ab II 7446

Prerequisite: No more than two years of French study

Length: Two Years

Credit: One full credit per year

Description: This two-year IB course provides an opportunity for highly motivated students

to begin the study of language and reach a High-Novice/Intermediate level by the end of the second year. The course moves quickly and covers a vast number of IB topics (and vocabulary related to those topics) while focusing on building written communication, spoken interaction, and reading for meaning and understanding skills. Using a whole range of French authentic resources and texts as a stimulus for communication, students are asked to actively learn and use communicative strategies to be successful. During the first year and second year, students are introduced to IB ab initio level texts and exam questions in preparation for the success on the IB examination.

IB Spanish Ab I 7436/ IB Spanish Ab II 7448

Prerequisite: No more than two years of Spanish study

Length: Two Years

Credit: One full credit per year

Description: This two-year IB course provides an opportunity for highly motivated students to begin the study of language and reach a solid High-Novice/Intermediate level by the end of the second year. The course moves quickly and covers a vast number of IB topics (and vocabulary related to those topics) while focusing on building written communication, spoken interaction, listening comprehension and reading text-handling skills for meaning and understanding. Using a whole range of Spanish authentic resources and texts as a stimulus for communication, students are asked to actively learn and use communicative strategies to be successful. During the first year and second year, students are introduced to IB ab initio level texts and exam questions in preparation for the success on the IB examination.

French B SL I 7432/ IB French B SL II 7447

IB Spanish B SL I 7435/ IB Spanish B SL II 7443

Prerequisite: Successful completion of either French III or Spanish III

Length: Two Years

Credit: One full credit per year

Description: This two-year IB course is designed for motivated students with some previous experience in the language and provides an opportunity for students to reach a more advanced level of proficiency. The course moves quickly and covers a vast number of IB topics (and vocabulary related to those topics) while focusing on building written communication, spoken interaction, listening comprehension and reading text-handling skills for meaning and understanding. Using a whole range of French or Spanish authentic resources and texts as a stimulus for communication, students are asked to actively learn and use communicative strategies to be successful. During the two-year program, students actively work with IB standard-level texts and questions to achieve communicative competence in a range of situations.

IB French B HL I 7434/ IB French B HL II 7441

IB Spanish B HL I 7437/ IB Spanish B HL II 7445

Prerequisite: Successful completion of either French IV or Spanish IV

Length: Two Years

Credit: One full credit per year

Description: This two-year IB course is designed for highly motivated students with extensive experience in the language, and provides an opportunity for students to reach an advanced level of proficiency in a wider range of situations. The course moves quickly and covers a vast number of IB topics (and vocabulary related to those topics) while focusing on building written communication, spoken interaction, and reading for meaning and understanding skills. Using a whole range of French or Spanish authentic resources and texts as a stimulus for communication, students are asked to actively learn and use

communicative strategies to be successful. During the two-year program, students actively work with IB standard-level texts and questions to achieve communicative competence in a range of situations. This higher-level course differs in that students are exposed to a larger variety of literary texts and are expected to write in more depth with a wider breadth of language.

Performing Arts Department

Performing Arts 7552

Prerequisite: None

Length: One Year course.

Credit: One full credit per year.

Description: The purpose of this yearlong course is to help students develop their acting skills by participating in theater games, improvisations, scenes, monologues, public speaking, film studies, and productions. The theater I students will participate in at least one major production. Students should be prepared to participate in all aspects of theater and be willing to work through issues of confidence and apprehension in order to feel successful. Theater I is an accepting and supportive environment that can build confidence, but also one that demands a lot from participants.

High School Concert Band 7550

Prerequisite: Minimum of two years' performance experience on a band instrument, or with the director's approval

Length: One Year (repeatable course)

Credit: One full credit

Description: The Symphonic Band is designed for students with experience playing woodwind, brass, or percussion instruments. The course will develop students' ability in reading, interpreting, and understanding written musical notation through the preparation of music for performance. The course also focuses on developing students' understanding of the elements of music, music history and context, and self-evaluation of musical performances. Students will prepare music from a wide variety of musical genres and styles for multiple performances throughout the school year.

High School Choir 7554

Prerequisite: None

Length: One Year (repeatable course)

Credit: One full credit

Description: The vocal ensemble course is for students who would like to express themselves through the medium of singing in an ensemble setting. Students will learn the fundamentals of singing, voice training, reading written musical notation, ensemble performance skills, and musical history and context through applied practice and public performance of a variety of genres and styles.

Visual Arts Department

Art Foundation 1 7510

Prerequisite: None

Length: One Year

Credit: One full credit

Description: Art Foundation 1 is a one-year course that provides a foundation for the introductory exploration and development of skills, techniques, multimedia characteristics, art-making processes, and the development of artistic creativity. Students gain knowledge, understanding, and experience with manipulating new artistic practices associated with a range of media, skills, methods, techniques, and processes in both two- and three-dimensional media. Students explore the characteristics and challenges associated with a variety of materials and art-making forms ranging from drawing, painting, printmaking, collage, sculpture, ceramics, one- and two-point perspective, typography, and more. Fundamental concepts of the Elements of Art and Principles of Design will be introduced, practiced, and reinforced with focused content naturally embedded to support visual literacy, art vocabulary, art theory and practice, and creative problem-solving.

Art Foundation 2 7520

Prerequisite: Foundation 1

Length: One Year

Credit: One full credit

Description: Art Foundation 2 is a one-year course continuum of Art 1 that sharpens, hones and challenges students' skills, techniques, understandings of specific individual media, art-making processes, and further development of creative expression and intentions through a documented process in a visual arts journal. Endless opportunities are afforded throughout the year as students gain deeper knowledge and understanding of artistic practices associated with a range of media, skills, methods, processes, and techniques in both two- and three-dimensional media. Students explore the characteristics, opportunities, and limitations of a variety of media including drawing, painting, printmaking, collage, sculpture, ceramics, decorative arts, architecture, graphic design, and photography. Fundamental concepts will be practiced and reinforced with focused content naturally embedded to support visual literacy, subject-specific language, art theory and practice, creative problem solving, and research. Students will take a tour of the art world exploring: art history, artists, art movements and perspectives, paintings, artifacts, sculptures, art criticism, political, social and historical context, and function and purpose all of which lead to international-mindedness and personal self-reflection. Students can expect art-making, rigorous integration of art literacy, cross-curricular connections integrating art history, investigation of community and cultures, and the exploration of lifelong learning and careers in the visual arts.

IB Art SL I & II 7530 & 7540 / IB Art HL I & II 7531 & 7541

Prerequisite: Successful completion of Art Foundation 1 or Art Foundation 2

Length: Two Years

Credit: One full credit per year

Description: The IB Diploma Programme Visual Arts course encourages students to challenge their own creative and cultural expectations and boundaries. It is a thought-provoking course in which students develop analytical skills in problem-solving and divergent thinking while working towards technical proficiency and confidence as art-makers. In addition to exploring and comparing visual arts from different perspectives and in different contexts, students are expected to engage in, experiment with and critically

reflect upon a wide range of contemporary practices and media. The course is designed for students who want to go on to study visual arts in higher education as well as for those who are seeking lifelong enrichment through visual arts. Supporting the International Baccalaureate mission statement and learner profile, the course encourages students to actively explore the visual arts within and across a variety of local, international and intercultural contexts. Through inquiry, investigation, reflection and creative application, visual arts students develop an appreciation for the expressive and aesthetic diversity in the world around them, becoming critically informed makers and consumers of visual culture. The new course has three components:

Part 1 - Comparative study – 20%

This is an independent, visual and written critical and contextual investigation in which students explore and compare three different artworks from contrasting cultural contexts (local, national, international and/or intercultural).

Part 2 - Process portfolio – 40%

Students are required to compile carefully selected materials, documenting evidence of their sustained experimentation, exploration, manipulation and refinement of a range of art-making activities during the development of a coherent body of resolved artworks over the two-year course.

Part 3 - Exhibition – 40%

This final exhibition of a coherent selected body of work showing evidence of students' technical accomplishments and decision-making processes. Additionally, the selection and arrangement of the exhibition, exhibition text, and curatorial rationale exemplify their understanding of the use of materials, ideas, and practices appropriate to visual communication. The audience will have an opportunity to speak with the students to learn about the challenges, triumphs, innovations, and issues that have impacted the artist's intentions, their selections and the final presentation of their artworks.

Process Journal - Throughout the course, students are required to maintain a process JOURNAL. Students should be encouraged to find the most appropriate ways of recording their development and have free choice in deciding what form the visual arts journal should take. The aim of the visual arts journal is to support and nurture the acquisition of skills and ideas, to record developments, and to critique challenges and successes. It is expected that much of the written work submitted for assessment tasks at the end of the course will have evolved and been drawn from the contents of the visual arts journal. Although sections of the journal will be selected, adapted and presented for assessment the journal itself is not directly assessed or moderated. It is, however, regarded as a fundamental activity of the course and ultimately produces the process portfolio. Students undertaking the course will be expected to include art as a major component of their university studies.

Health and Physical Education Department

HPE I 7610/ HPE II 7620

Prerequisite: None

Length: One Year each

Credit: One full credit per year

Description: AISL integrates both Health and Physical education into the HPE courses. AISL believes that participation in Physical Education is an essential part of each student's overall education. The Physical Education (PE) teacher provides a sequential program of motor skill development and sports knowledge in a variety of settings that address students' needs and potential. The program strives to increase personal fitness while at the same time encouraging students to become life-long participants in physical activity.

In grades 9 and 10, the program prepares students to be self-committed to physical education through participation in a wide range of activities and sports as well as with the introduction of standardized fitness assessment. Acquisition of knowledge goes beyond rules and regulations to include sport-specific fitness, tactics, and strategies, as well as officiating and etiquette. While skill development and team play is assessed, the major focus in all units is attitude, participation, and effort. Opportunities are provided for students to develop their cooperation and communication skills. Finally, students are empowered to improve their individual fitness.

Health is a compulsory element of the HPE course. Health classes are designed to provide students with the tools for making health-enhancing decisions. Students work to understand the impact of health issues on their wellbeing and others. Through the development of critical thinking skills, students are also introduced to and made aware of health issues that affect various people around the world.

Self Defense I 7631

Prerequisite: None

Length: One Year

Credit: One full credit per year (0.5 credit per semester)

Description: This class will cover the basic principles of martial arts and key concepts in self-defense. Students will cover all the material required to advance in the martial arts ranks, however, attempting to advance in rank through the testing system is optional.

Health is a compulsory element of the Self Defense course. Health classes are designed to provide students with the tools for making health-enhancing decisions. Students work to understand the impact of health issues on their wellbeing and others. Through the development of critical thinking skills, students are also introduced to and made aware of health issues that affect various people around the world.

Sports Training I 7630

Prerequisite: None

Length: One Year

Credit: One full credit per year (0.5 credit per semester)

Description: This class covers the various aspects of fitness training and conditioning. Students will increase their fitness levels through a variety of training methods. Students will be expected to design their own training programs that will meet their personal fitness goals.

Health is a compulsory element of the Personal Fitness and Conditioning course. Health classes are designed to provide students with the tools for making health-enhancing decisions. Students work to understand the impact of health issues on their wellbeing and others. Through the development of critical thinking skills, students are also introduced to and made aware of health issues that affect various people around the world.

Additional Courses

TOK I/ TOK II 7331/7341 (Theory of Knowledge I and II)

Prerequisite: None

Length: Two Semesters (2nd Sem Junior / 1st Sem Senior)

Credit: One-half credit per semester

Description: Theory of Knowledge is designed to give students an opportunity to reflect upon the nature of knowledge, and to reflect on how we know what we claim to know. Successful completion of the Theory of Knowledge is a requirement for earning an International Baccalaureate diploma.

Students are expected to engage in a thoughtful and purposeful inquiry into different ways of knowing, and into different areas of knowledge. The foundation of the course is an examination and consideration of “knowledge questions”, in which students are required to consider concepts such as evidence, the nature of knowledge, judgment, and meaning. The student will need to demonstrate an understanding of the eight ways of knowing (reason, intuition, memory, sense perception, faith, language, emotion, and imagination) and six areas of knowledge (Mathematics, Arts, Natural Sciences, Human Sciences, History, and Ethics).

To meet the requirements of the International Baccalaureate, students must complete an internal and external assessment. The internal assessment consists of an oral presentation that will be made after the completion of the TOK II (12th Grade) semester. The marks awarded by the teacher for the presentation will then be submitted to the IBO for moderation. The external assessment consists of an essay (1,600 words, maximum) which is completed at the mid-point of the TOK II semester, and submitted to IBO for grading. To meet the AIS Lagos course requirements, students will need to engage in discussions and presentations, as well as keep up with all reading and composition assignments and exercises.

Junior Seminar 7931

Prerequisite: None. All AISL students in their Junior Year are enrolled in this course.

Length: One Semester

Credit: No Credit Given

Description: Junior Seminar is a non-credit, non-graded course designed to prepare students for college and career choices, IB extended essay supervision, and CAS and Service Learning reflections.
