

Rx 4 Discovery Math

The King's Academy offers ***Rx 4 Discovery Math*** to strengthen the math skills of our students. The ***Rx 4 Discovery Math*** program offers small group supplemental math instruction at a reasonable cost.

Who is eligible to enroll in the program?

Eligibility for this program is based on teacher recommendations, entrance testing results, and/or achievement test results. Students meet in small groups 2 days per week for 30-45 minutes during the school day. This instruction is supplemental to the math curriculum being covered in the classroom.

How is this program different from the classroom curriculum?

Rx 4 Discovery Math is a multi-sensory approach to teaching math skills and is designed to provide extended instruction which will build and strengthen number sense, math fluency, math vocabulary, and problem-solving strategies. Students will be challenged to apply their growing understanding of number sense and problem solving by using activities that challenge thinking and reasoning. Hands-on, research-based, number sense activities will be utilized as the core content in this intervention while mediation, Socratic questioning, and the strengthening of cognitive functions will serve as the core methodology. Students' foundational math concepts will be strengthened while their thinking and problem-solving skills will be challenged, all within an atmosphere where math anxiety is reduced, and thinking is maximized.

How is progress assessed?

Students are given the KTEA Achievement test prior to starting the program and again in the spring to chart progress.

There is an additional fee for this program. This fee is in addition to regular tuition payments. If enrollment occurs during the school year, the cost will be pro-rated according to the same schedule on the tuition contract.
