

Manually Update Policies on a Chromebook

There is a manual procedure that works well if there is a policy that you do not want to wait for or you have a Chrome device that just doesn't seem to pull down policies from the Google Management console, including forcing in/out of Kiosk mode (ex. for testing).

1. Login to the Chrome device that is having the problem and launch the Chrome browser (if it does not launch automatically).
2. In the URL field type **Chrome://policy** and hit enter. At the top left you will see a button called **Reload Policies**. Click on that button, wait about 30-60 seconds and log off, then restart IF you are going into or coming out of Kiosk mode (ex. for testing).
