Market Recap

April was a terrible month for the financial markets. On the equity side, the NASDAQ plunged a staggering -13%. The worst showing since the early months of the 2008 financial crisis dragged the tech-heavy index down -21% for the year. The broad market S&P 500 shed -8.8% in April and -13.3 for the year, marking its worst start in 83 years, while the large cap Dow Jones lost -4.9% for the month and is down -9.2% since the year began. Normally, a major stock market slide would result in a flight-to-quality, pushing bond yields lower, but this wasn't the case. Bonds were clobbered as well. Fixed income investors were hyper-focused on the Fed, while the Fed was fixated on rising inflation.

The headline consumer price index (CPI) rose +1.2% in March and +8.5% year-over-year, a new 43-year high. Gasoline prices were the major driver, up +18% for the month, while food prices rose +1.0% in March and +8.8% year-over-year, the highest since 1981. Core CPI, which excludes food and energy prices, rose just +0.3% in March but +6.5% on an annual basis, which was also the highest in over four decades. The elevated core indicates how wide-spread the price increases have become. Anyone who thought crypto was an inflation hedge may have found themselves second-guessing when Bitcoin tumbled -17.8% in April. Clearly, there were few places to hide.

The initial reading of Q1 GDP was a shocker, as economic growth for the first three months of 2022 posted a negative reading of -1.4%. However, the report details revealed the deteriorating trade balance was to blame, and to a lesser degree slower business inventory accumulation. These two factors subtracted nearly four percentage points from the headline. On a positive note, consumer spending increased from the prior quarter to a +2.7% annual pace, while business investment surged +9.2% as companies expanded equipment and technology spending to fill the labor gap. Both consumers and businesses have yet to feel enough of a pinch from rising interest rates to curtail purchases.

The labor gap has actually widened as job openings climbed to yet another high in March. There are now almost two jobs for every job-seeker. If the U.S. does enter recession later this year, this imbalance will almost certainly narrow. In the meantime, employers are paying more to attract and retain workers. The employment cost Index (ECI) surged +1.4% in the first quarter, the most in the 21-year history of the series.

The Fed finds itself in a tough spot. In retrospect, the puny quarter point hike in March was a mistake. With inflation at intolerable levels and GDP already starting to slow, they have no choice but to slow growth further through more aggressive rate hikes. A parade of Fed officials gradually conveyed the message that the market had already embraced. The Fed had some major catching-up to do. The implied year-end overnight rate at the end of April was 2.86%, up from 2.39% when the month began. The Fed is now expected to raise rates by 50 bps at the May, June, and July meetings. Less than seven months earlier, Fed officials were split on whether a single 25 bps hike would be appropriate in 2022.

Worsening inflation and a more aggressive Fed sent bond yields higher yet again. The two-year Treasury note closed April yielding 2.72%, an increase of 38 basis points on the month. The two-year yield is now just 25 basis points below the 2.97% highpoint reached in December 2018. The 10-year T-note rose 60 basis points during April, closing the month at 2.93%, just a tick away from the highest since December 2018. Interestingly, the curve has steepened and talk of an inverted curve has faded away as the 2s-10s spread has gone from just 8bps a month ago to almost 25bps as of April 30th.

Investment Officers' Certification

This report is prepared for the University Health System (the "Entity") in accordance with Chapter 2256 of the Texas Public Funds Investment Act ("PFIA"). Section 2256.023(a) of the PFIA states that: "Not less than quarterly, the investment officer shall prepare and submit to the governing body of the entity a written report of the investment transactions for all funds covered by this chapter for the preceding reporting period." This report is signed by the Entity's investment officers and includes the disclosures required in the the PFIA.

The investment portfolio complied with the PFIA and the Entity's approved Investment Policy and Strategy throughout the period. All investment transactions made in the portfolio during this period were made on behalf of the Entity and were made in full compliance with the PFIA and the approved Investment Policy.

It is not possible to directly invest in an index. Financial forecasts, rates of return, risk, inflation, and other assumptions may be used as the basis for illustrations. They should not be considered a guarantee of future performance or a guarantee of achieving overall financial objectives. Past performance is not a guarantee or a predictor of future results of either the indices or any particular investment. S&P rates the creditworthiness of individual bonds from: AAA highest to D lowest.

Investing in fixed income securities involves interest rate risk, credit risk, and inflation risk. Interest rate risk is the possibility that bond prices will decrease because of an interest rate increase. When interest rates rise, bond prices and the values of fixed income securities fall. When interest rates fall, bond prices and the values of fixed income securities rise. Credit risk is the risk that a company will not be able to pay its debts, including the interest on its bonds. Inflation risk is the possibility that the interest paid on an investment in bonds will be lower than the inflation rate, decreasing purchasing power.

Cash alternatives typically include money market securities and U.S. treasury bills. Investing in such cash alternatives involves inflation risk. In addition, investments in money market securities may involve credit risk and a risk of principal loss. Because money market securities are neither insured nor guaranteed by the Federal Deposit Insurance Corporation or any other government agency, there is no guarantee the value of your investment will be maintained at \$1.00 per share, and your shares, when sold, may be worth more or less than what you originally paid for them. U.S. Treasury bills are subject to market risk if sold prior to maturity. Market risk is the possibility that the value, when sold, might be less than the purchase price.

Investing in stock securities involves volatility risk, market risk, business risk, and industry risk. The prices of most stocks fluctuate. Volatility risk is the chance that the value of a stock will fall. Market risk is the chance that the prices of all stocks will fall due to conditions in the economic environment. Business risk is the chance that a specific company's stock will fall because of issues affecting it. Industry risk is the chance that a set of factors particular to an industry group will adversely affect stock prices within the industry.

Securities offered by HTS: (1) are not FDIC (Federal Deposit Insurance Corporation) insured; (2) are not bank deposits; (3) are not guaranteed by any bank or by any other federal government agency. None of the named entities are affiliates of HTS or HSAM. Hilltop Securities Asset Management (HSAM) is an SEC-registered investment advisor. Hilltop Securities Inc. (HTS) is a registered broker-dealer, registered investment adviser and municipal advisor firm that does not provide tax or legal advice. Member of FINRA & SIPC. HTS and HSAM are wholly owned subsidiaries of Hilltop Holdings, Inc. (NYSE: HTH) located at 717 N. Harwood St., Suite 3400, Dallas, Texas 75201, (214) 859-1800, 833-4HILLTOP.
